You can be there with NCME TV!

The first nationwide medical television service, NCME—The Network for Continuing Medical Education—brings you visually the important achievements of leading medical authorities. By means of closed-circuit television, this independent network provides your hospital or medical school with a complete videotape service that helps shorten the gap between new medical knowledge and its availability for clinical or teaching purposes.

The Network
for Continuing
Medical
Education

NCME TV Offers These Practical Benefits:

☐ Every two weeks a new 60-minute videotape dealing with three separate medical subjects is sent to participating institutions.

☐ Content and format of NCME telecasts fulfill criteria for postgraduate medical education, permitting American Academy of General Practice course credits under specified conditions.

☐ To help your institution make effective use of closed-circuit television, NCME offers a wide range of services and utilization aids, including:

Technical consultation in setting up a closed-circuit system; advance program information on the contents of each telecast; display units to help publicize programs; expense-paid seminars to improve utilization of medical television.

☐ NCME programs are brief and may be shown as often as desired; you can view the telecasts at times that are most convenient, without disrupting your normal schedule.

☐ Frequently NCME makes available published papers related to subjects presented on closed-circuit television.

A recent NCME hospital telecast presented Philip N. Sawyer, M.D., Professor of Surgery and Head of the Vascular Surgical Service at Downstate Medical Center, Brooklyn, N. Y. in a demonstration and evaluation of "Gas Endarterectomy."

In this program, Dr. Sawyer performs the operation on a patient with gross occlusion of the right iliac, femoral and popliteal arteries.

In Dr. Sawyer's view, gas endarterectomy has several advantages over mechanical methods: the operation can be completed faster, causes less damage to the arteries and offers a more successful outcome.

NCME is an independent network supported by Roche Laboratories to increase the use of closed-circuit TV for medical education under direct hospital and school control.

If your hospital or school does not participate in the biweekly NCME program, information on the cost-fre service may be obtained by writing to NCME, 342 Madison Avenue
New York, N. Y. 10017

INTERESTING READING:

Many of the bookstores are selling a pocketbook version of "Understanding Media" by Marshall McLuhan. The highly-respected, popular author discusses two fundamental questions about the modern world: What are communications and how do communications affect mankind? The work interprets the entire process of communications from the invention of movable type through the electronic age.

PROCTOLOGY IN ANCIENT EGYPT

Since physicians are men of learning, knowledge of medical history is a necessity, not a luxury. In the absence of a history of proctology, this essay hopefully provides some insight into the management of anorectal disorders mentioned in the medical papyri.

Testifying to the quality of medicine practiced and recognizing the antiquity of the specialty of proctology, some of the knowledge passed along from ancient Egypt continues to influence present-day medicine. Enemas and suppositories are still in fashion. To unload their colons, people continue to take fruit, senna, colocynth and castor oil. The ancient Egyptians treated diarrhea, round and tapeworm infestations and bilharziasis; the medical specialists who treated anorectal disorders were held in especial esteem.

All these little known historical facts of our medical heritage should be bettter publicized to promote respect for the antiquity of our profession, to inspire a greater appreciation of this legacy from the past, and to provide moderation in evaluating our progress. — Leon Banov, Jr., M.D., Charleston, South Carolina: *Southern Medical Journal.*

Anatomy courses at colleges in Michigan and the nation are a far cry today from the lectures of 75 years ago. This photo, from the historic collection of the University of Michigan Medical School, shows five medical students: left to right, Edwin A. Murbach, Stephen C. Glidden, Howard A. Herrington, and James F. Breakey, all in the Class of 1894, and Laurence C. Grosh, right foreground, Class of 1895.

IN MEMORIAM

J. G. Bayles, M.D., Detroit

John G. Bayles, M.D., Detroit general practitioner for 40 years, died September 20. He was 67.

Doctor Bayles received his premedical education at the University of Michigan. He was graduated from the Tulane Medical School of Louisiana in 1929. His hospital affiliation was with Lincoln Hospital.

He was a 32nd degree Mason and a member of Phi Lambda Kappa medical fraternity.

M. J. Budge, M.D., Alma

Melvin J. Budge, M.D., Alma general practitioner, died September 16 at the age of 79.

A Life Member of MSMS, he had practiced in Ithaca since 1921. He also was an anesthesialogist at Gratiot Community Hospital, Alma, from 1959 until his retirement in 1966.

Doctor Budge was graduated from the University of Michigan Medical School in 1920. Previously a teacher, he served as principal of Riverdale Schools from 1910-12, as principal of McAllen School, McAllen, Texas, from 1913-14, and as superintendent of schools at Coleman, Michigan, 1914-15. During World War I he was a member of the Medical Corps.

He served on the Ithaca School Board and was a member of the American Society of Anesthesiologists.

J. S. Burleson, M.D., Grand Rapids

John S. Burleson, M.D., Grand Rapids, a former vice president of the American Proctological Society, died September 25. He was 58. Doctor Burleson was the owner and director of Burleson Hospital in Grand Rapids for 31 years.

He was graduated from the Medical College of Virginia in 1937. After serving his internship at Butterworth Hospital, Grand Rapids, he entered practice in Grand Rapids. In 1943 he served as chief proctologist at the Detroit House of Corrections.

He was a Fellow of the International Academy of Proctology and a member of the American Proctological Society, the American College of Surgeons, and Alpha Kappa Kappa.

H. Q. Groos, M.D., Escanaba

Harold Q. Groos, M.D., Escanaba physician for about 40 years, died at the age of 69.

Doctor Groos, a native of Escanaba, had been in practice there since 1928. He was a 1924 graduate of the University of Illinois Medical School.

In the past he had served as president, vice president, secretary and treasurer of the Delta-Schoolcraft County Medical Society.

He was surgeon for the Chicago & North Western Railroad and was also associated with the Harnischfeger Corporation. He was affiliated with St. Francis Hospital, Escanaba.

Doctor Groos was a member of the American Association of Railway Surgeons, Michigan Industrial Medical Association and Nu Sigma Nu.

E. L. Hansen, M.D., Battle Creek

Edwin L. Hansen, M.D., Battle Creek surgeon and gynecologist for many years, died September 29. He was 67.

Doctor Hansen was graduated in 1924 by the Loma Linda University School of Medicine in California. His internship was served at the Los Angeles General Hospital. He did postgraduate work in hospitals in Denmark, Germany and Austria.

He was a Fellow of the American College of Surgeons and a member of the Pan-Pacific Surgical Society and of numerous fraternal orders.

Doctor Hansen was the brother of Harvey C. Hansen, M.D., also of Battle Creek.

D. R. Hagge, M.D., Livonia

Donald R. Hagge, M.D., chief of surgery at St. Mary Hospital in Livonia, died September 13 at the age of 46.

Doctor Hagge was immediate past president of the Michigan Archaeological Society. Particularly interested in disease in prehistoric man, he was the author of a book on paleopathology.

He received the M.D. degree from the State University of Iowa in 1945. From 1946 through 1948 he served as a flight surgeon in the Medical Corps.

Formerly chief of staff at St. Mary Hospital, he was also affiliated with Harper and Mt. Carmel hospitals in Detroit and William Beaumont Hospital in Royal Oak.

Doctor Hagge was a Fellow of the American College of Surgeons and a member of the Detroit Surgical Society, Detroit Surgical Association, and Phi Rho Sigma fraternity.

Robert Licht, M.D., Detroit

Robert Licht, M.D., a radiologist at Mt. Carmel Mercy Hospital, Detroit, died September 26. He was 42.

IMPOTENCE

Android®

(thyroid-androgen) TABLETS

*Effectiveness confirmed by another double blind study**

1.SUMMARY

ANDROID	GOOD TO EXCELLENT 75%
PLACEBO	20%

2. Forty cases reported.
3. Cites synergism between androgen and thyroid.
4. No side effects in patients treated.
5. Alleviation of fatigue noted
6. Case histories on 4 patients.
7. Although psychotherapy still needed, role of chemotherapy cannot be disputed.

"Sexual impotence treatment with methyl testosterone – thyroid (ANDROID) a double blind study" – Montesano, Evangelista: Clinical Medicine, April 1966.

CONTRAINDICATIONS—Methyl testosterone is not to be used in malignancy of reproductive organs in male, coronary heart disease. Thyroid is not to be used in heart disease, hypertension unless the metabolic rate is low.

Choice of **4** *strengths*

Android

Each yellow tablet contains:

Methyl Testosterone	2.5 mg.
Thyroid Ext. (1/6 gr.)	10 mg.
Glutamic Acid	50 mg.
Thiamine HCL	10 mg.

Dose: 1 tablet 3 times daily.

Available:
Bottles of 100, 500, 1000.

Android-HP

HIGH POTENCY

Each red tablet contains:

Methyl Testosterone	5.0 mg.
Thyroid Ext. (½ gr.)	30 mg.
Glutamic Acid	50 mg.
Thiamine HCL	10 mg.

Dose: 1 tablet 3 times daily.

Available:
Bottles of 100, 500, 1000.

Android-X

EXTRA HIGH POTENCY

Each orange tablet contains:

Methyl Testosterone	12.5 mg.
Thyroid Ext. (1 gr.)	64 mg.
Glutamic Acid	50 mg.
Thiamine HCL	10 mg.

Dose: 1 or 2 tablets daily.

Available:
Bottles of 60, 500.

Android-Plus

WITH HIGH POTENCY
B-COMPLEX AND VITAMIN C

Each white tablet contains:

Methyl Testosterone	2.5 mg.
Thyroid Ext. (¼ gr.)	15 mg.
Ascorbic Acid (Vit. C)	250 mg.
Thiamine HCL	25 mg.
Glutamic Acid	100 mg.
Pyridoxine HCL	5 mg.
Niacinamide	75 mg.
Calcium Pantothenate	10 mg.
Vitamin B-12	2.5 mcg.
Riboflavin	5 mg.

Dose: 2 tablet twice daily.
Available: Bottles of 60, 500.

Write for literature and samples:

BROWN **THE BROWN PHARMACEUTICAL CO.**
2500 W. 6th St., Los Angeles, Calif. 90057

REFER TO PDR

also available with ESTROGEN

Android-E

Each Tablet Contains:

Methyl Testosterone	2.5 mg.
Ethinyl Estradiol	0.02 mg.
Thyroid Ext. (1/6 gr.)	10 mg.
Thiamine Hydrochloride	10 mg.
Glutamic Acid	50 mg.

INDICATIONS: Advantage is taken of the anabolic action of ANDROID without its virilizing effect. Estrogen balances the androgen—only steroid effect remains Geriatrics, post-operative and debilitating disease, osteoporosis. **DOSE**: One tablet t.i.d. Female patients should have a rest period 5 to 7 days after 21 days of medication. **SIDE EFFECTS**. In the female, excessive dosage may produce virilizing effects of most androgens hoarseness, hirsutism, enlarged clitoris Symptoms can be avoided by keeping the dosage below 300 mg of testosterone per month **CONTRA-INDICATIONS** See Android Ethinyl estradiol is not to be used in latent malignancy of reproductive organs or mammary glands.

painful night leg cramps...
respond to specific therapy with
QUINAMM™
(Quinine sulfate, 260 mg., Aminophylline, 195 mg.)

The Bettman Archive

Just one tablet at bedtime • Prevents painful night leg cramps • Permits restful sleep

How many of your patients stamp their feet at night and lose sleep because of painful leg cramps? Unless prompted, they usually fail to report this distressing condition and suffer needlessly.

One tablet of QUINAMM at bedtime usually controls distressing night cramps and permits restful sleep with the initial dose.

Prescribing information—Composition: Each white, beveled, compressed tablet contains: Quinine sulfate, 260 mg., Aminophylline, 195 mg. **Indications:** For the prevention and treatment of nocturnal and recumbency leg muscle cramps, including those associated with arthritis, diabetes, varicose veins, thrombophlebitis, arteriosclerosis and static foot deformities. **Contraindications:** QUINAMM is contraindicated in pregnancy because of its quinine content. **Side Effects/Precautions:** Aminophylline may produce intestinal cramps in some instances, and quinine may produce symptoms of cinchonism, such as tinnitus, dizziness, and gastrointestinal disturbance. Discontinue use if ringing in the ears, deafness, skin rash, or visual disturbances occur. **Dosage:** One tablet upon retiring. Where necessary, dosage may be increased to one tablet following the evening meal and one tablet upon retiring. **Supplied:** Bottles of 100 and 500 tablets.

Our extensive diagnostic treatment services include the following:

- Organic and psychological therapy for the psychiatrically and emotionally disturbed of all ages.
- Diagnostic evaluation of neurological disorders.
- Rehabilitative services for geriatric and convalescent patients.
- Medico-Legal counsel.
- Diagnostic and psychological evaluation and hospitalization, if indicated, of juveniles for Probate and Juvenile Courts.

MSMS Members In The News

BY CAROL MAXWELL
OF THE MSMS STAFF

H. David Fenske, M.D., South Haven, has been presented the Medical Merit of Honor, South Vietnam's highest civilian award, by the South Vietnamese Ministry of Health for his efforts in establishing a national eye-care program. In addition to his duties as 12th USAF Hospital Chief of Ophthalmology and ophthalmology consultant for the Pacific area, Doctor Fenske has been active in the development of the Cam Ranh City Orphanage and also in the Med-Cap civilian aid program, a voluntary medical mission.

Arthur W. Strom, M.D., Hillsdale, was installed as president of the Michigan Society of Internal Medicine at the annual convention at Hidden Valley. He had served as a director of the society for some time.

V. A. Marks, M.D., Midland, was the guest speaker at a recent meeting of the Midland Hospital Auxiliary.

James J. Lightbody, M.D., Detroit, MSMS President and medical director of the Michigan Chapter of the Arthritis Foundation, was a featured speaker at a free Arthritis Forum in Battle Creek. Vance B. Lancaster, M.D., Battle Creek, was coordinator of the forum, co-sponsored by the Michigan Chapter of the Arthritis Foundation and the Calhoun County Medical Society.

Henry E. Malcolm, M.D., Lansing, has returned to Lansing to practice gynecology after a year of practice in Freeport, Grand Bahama, Bahama Islands.

Stanley Moleski, M.D., Grand Rapids, has announced his retirement from the office of city physician of Grand Rapids which he has occupied for 23 years.

Lambert J. Geerlings, M.D., Fremont, was honored by Gerber Memorial Hospital with the presentation of a bronze plaque. The inscription praised him for his long service to that institution and for his dedication to the health care of the people in the community, "a source of inspiration to all those who labored with him."

William M. Chavis, M.D., Detroit, presented a paper before the Liberian Medical Association in Monrovia, Liberia, West Africa, on "The Significance of the Papanicolaou Smear as a Screening Technique for Cancer of the Cervix in a Private Black American Medical Practice."

William Dito, M.D., Pontiac, conducted a seminar at Oakland University on "Chromosome Abnormalities," the opening session in a series of seminars developed for medical technologists.

Reuven Bar-Levav, M.D., Detroit, is the 1968-69 president of the Wolverine State Group Phychotherapy Society, an affiliate Society of the American Group Psychotherapy Association.

MSMS Council Spells Out Immediate and Long-Range Recommendations to Educate More Physicians in State

Specific, detailed proposals to meet the present critical shortage of physicians in Michigan and to offer long-range solutions were outlined Nov. 6 by the Michigan State Medical Society Council in a letter to the State Board of Education.

The letter to Ira Polley, State Superintendent of Public Instruction, from Ross V. Taylor, M.D., Jackson, Council Chairman, stressed "deep concern about the serious shortage of physicians and paramedical personnel in Michigan."

MSMS REAFFIRMED PREVIOUS recommendations that the immediate medical manpower shortage can best be solved if sufficient funds are provided to expand the Michigan State University College of Human Medicine to a four-year, degree-granting medical school and to increase both the University of Michigan and Wayne State University medical schools to optimum size. MSU began a two-year medical school in 1966 and now has 78 students.

The MSMS Council, in the letter from Doctor Taylor, also offered several long-range solutions. MSMS urged the State Board of Education "to proceed with planning for an eventual fourth and fifth medical schools."

The Council spelled out that the Board should require that "each new medical school have affiliation with, and control by, a university possessing facilities for the education of ancillary and paramedical personnel."

IN A BOLD NEW APPROACH toward resolving the medical manpower shortage, the MSMS Council took unprecedented action in supporting the State Board of Education in its efforts to encourage the three medical schools "to take the necessary steps to develop curricula which will make possible the granting of either the degree of doctor of medicine or doctor of osteopathy according to the student's option." The MSMS letter also urged, "That each new school be developed so as to offer its students an educational program granting either the M.D. or D.O. degree upon graduation."

The State Board of Education officials have discussed the proposed degree option with officials of the three universities — University of Michigan, Wayne State University and Michigan State University — and also the administrators of the three medical schools. The three medical schools reportedly are considering possible options in degrees and curricula.

THE MSMS DEGREE OPTION recommendation follows the vote by its 1967 House of Delegates to admit qualified osteopaths to associate membership and is in line with the vote of medical doctors in a poll conducted in 1966 by the Michigan House of

(Continued on Next Page)

New MSMS Efforts to Obtain More Doctors Pick Up Momentum, Much Civic Support

The MSMS medical manpower efforts received strong support for businessmen, civic leaders, industrialists, labor officials, educators, professional men, hospital administrators, and others at the Battle Creek Conference on Michigan Medical Manpower October 23, the Grand Rapids regional conference November 14 and the Saginaw regional conference November 21.

RECOMMENDATIONS/Cont

Representatives State Affairs Committee, which asked all physicians, "Do you believe amalgamation of MDs and DOs would be in the best interest of the people of Michigan?" The Committee reported that an overwhelming majority of the doctors of medicine favored amalgamation, whereas osteopaths opposed it at that time.

The recommendations of the Medical Society Council bear a similarity to those accepted by the State Board of Education at its October 29 meeting from its Citizens Committee on Education for Health Care as ways to help solve the growing shortages of physicians and paramedical personnel.

THE DEGREE-OPTION PROPOSAL received the support November 11 of Dwight L. Wilbur, AMA president, in an address before the medical staff of Bon Secours Hospital in suburban Grosse Pointe. "The MSMS Council is to be complimented for its several proposals made to the State Board of Education to help relieve the medical manpower shortage in Michigan."

"The suggestion by MSMS that students be offered the degree option has definite economic advantages for taxpayers and also meets in a practical way any desire by some students to obtain an osteopathic degree," the AMA president declared. "That alternative would cost far less than to build any new college that would train only osteopaths, he suggested. Doctor Wilbur said many experts estimate the total cost to establish a completely new medical school is about $500,000 per student.

Doctor Wilbur explained that he was reacting to the Michigan State Medical Society's degree-option proposal as an individual. He pointed out that AMA has urged that osteopathic students should be given credit for courses whenever they transfer to MD schools. He reported that no MD college today offers the osteopathic degree.

MSMS LETTER TO STATE BOARD

November 8, 1968
The Honorable Ira Polley
State Superintendent of Public Instruction
520 Michigan National Tower
Lansing, Michigan 48933

Dear Doctor Polley:

The Michigan State Medical Society continues to be deeply concerned about the serious shortage of physicians within the state. The MSMS has for years been conscious of the expanding health needs in the State of Michigan. The manpower shortage of health personnel is becoming increasingly acute and is especially crucial regarding physicians.

For years the MSMS House of Delegates has urged continuous expansion of the state's medical schools and has acclaimed each step taken by the State Board in this direction. However, medical personnel shortages have continued to develop in spite of the Board's action, and will worsen unless the State Legislature provides the necessary funds to expand the Michigan State University medical school to a full degree program.

As part of the continuing study by MSMS of Michigan's responsibilities in the area of health needs, the recommendations of the "Citizens Committee of Education for Health Care" have been carefully reviewed. Immediate and long-range goals have been endorsed by The Council, meeting November 6, 1968. The Council of MSMS unanimously makes the following recommendations to the State Board of Education concerning immediate and long-range goals:

Immediate: Strongly reaffirm to the Governor of Michigan and the State Legislature its previous recommendation concerning the expansion to optimum size of the two existing degree-granting medical schools in Michigan; strongly recommend to the Governor of Michigan and the State Legislature that Michigan State University be provided sufficient funds to expand to a full degree-granting medical school of optimum size; encourage the medical schools at the University of Michigan, Wayne State University and Michigan State University (as an integral part of its expansion to a 4-year institution) to take the necessary steps to develop curricula which will make possible the granting of either the degree of Doctor of Medicine or Doctor of Osteopathy, according to the student's option.

Long-Range: Proceed with planning for an eventual fourth and fifth medical school for the State of Michigan, requiring that each new medical school have affiliation with, and control by, a university possessing facilities for the education of ancillary and paramedical personnel and that each new medical school be developed so as to offer its students an educational program granting either the MD or DO degree upon graduation.

The health needs of the people of the State of Michigan are of paramount importance and the patients' best interests must always be served. The MSMS believes that the foregoing recommendations will best meet the needs of Michigan and of the people. The origins of medicine or osteopathic medicine are of little importance with the continuing evolution of scientific medicine and the increasing quality of care. There is but one scientific basis of medical care and Michigan must continue to have medical schools of superior quality and pro-

MSMS Letter Continued:

ducing the highest caliber of physician. The degree option will permit the development of new schools of medicine with the science of medicine really determining the goals of medical education.

The MSMS therefore asks the State Board of Education to convene the authorities of the present medical schools so that studies may be initiated concerning the option of either the MD or the DO degree. If this is done, the schools all will be in a position to serve the young people of Michigan who wish to become either doctors of medicine or doctors of osteopathy. Such a course will offer that training in institutions of proven excellence and to the advantage of all of the people, and will make the most responsible and economical use of public funds.

Copies of this communication are enclosed for all members of the State Board of Education. Please be assured that the Michigan State Medical Society offers to the State Board and educational authorities of the medical schools its full cooperation in the implementation of these recommendations.

Very truly yours,
Ross V. Taylor, MD
Chairman of The Council

CC: The Honorable George Romney
Governor of Michigan
The Honorable Edwin L. Novak, President
State Board of Education

NEW DETROIT COMMITTEE ADDS DOCTOR BRUSH

Brock E. Brush, M.D., Detroit, is one of ten new members elected to the New Detroit Committee.

The organization, which recently incorporated under the name "New Detroit, Inc.," begins its second full year of operation. It was established following the 1967 Detroit riots, and seeks solutions to urban problems within the city, especially in areas of race relations. Members are elected on a rotating basis.

Careers Mobile In Detroit Area

Thousands of public health physicians and allied health professions viewed the Michigan Health Careers Mobile at Cobo Hall, November 11-15.

Then the Michigan Health Council Mobile moved to the WSU Careerland to tell WSU students more about the many career possibilities in the medical field.

The Mobile is scheduled for Highland Park Nov. 20-22.

Watch Next Issue for Desk Cards

The December issue of Michigan Medicine will include new copies of the "MSMS Maternal Health Desk Reference Cards #1 through #11" for all members to tear out and use.

The cards have been developed by the MSMS Committee on Maternal Health and have been issued periodically since 1961 to help MSMS members.

MSMS Judicial Commission Voting Underway

The deadline will be Dec. 1 for ballots for the MSMS Judicial Commission. Ballots were mailed Oct. 15 to members in the Judicial Commission Districts One, Two and Three.

MSMS members in District One, all of Wayne County will vote for two commissions from a group of four nominees, Eugene Freitas, M.D., Hugh M. Fuller, M.D., Floyd B. Levagood, M.D., and Donald N. Sweeney, Jr., M.D.

Nominees for District Two, all of Macomb, Oakland and St. Clair Counties, are Harold A. Furlong, M.D., Pontiac, and Harry E. Lichtwardt, M.D., Royal Oak. One will be elected.

MSMS members in Ingham, Livingston, Monroe, Shiawassee and Washtenaw counties will select one of three candidates in District Three. Nominated were Richard D. Coak, M.D., Tecumseh; R. Wallace Teed, M.D., Ann Arbor; and Franklin L. Troost, M.D., Holt.

The MSMS Constitution and Bylaws provide for the election of a Judicial Commission, which has general jurisdiction in matters relating to professional ethics, grievances, mediation, discipline and professional conduct of members.

DOCTORS HELP SCHOOL WITH SEX EDUCATION

A pilot study for establishing a formal sex education program for the Ludington area was approved by the Ludington Board of Education. The study will be sponsored by the West Shore Mental Health Clinic, the Mason County Medical Society, the Department of Education, and the local district.

The need for more physicians and allied health professionals in Michigan was stressed at the MSMS-MHC-MAP Conference on Michigan Medical Manpower October 23 by many speakers, including, left to right, Robert Rice, M.D., Greenville; Lionel Swan, M.D., Detroit; MSMS President James J. Lightbody, M.D., and AMA Past-President Milford Rouse. More than 200 participated in the conference at the MEA Conference Lodge.

Thyroid Workshop Soon at WSU

Interested physicians are invited to attend the Eighth Annual Thyroid Workshop at the WSU Medical School, December 11.

Principal speakers will be Sidney Ingbar, M.D., about "Pharmacology of Iodine," and Joseph Matovinovic, M.D., about "History of Goiter."

BARNARD SPEAKS AT HOPE COLLEGE

Christian Barnard, M.D., who performed the first successful human heart transplant received an honorary Doctor of Science degree when he delivers an address at Hope College Nov. 23.

Ground Broken For New Shield Service Center

Work has started on the Michigan Blue Shield and Michigan Blue Cross $30 million, 22-story Service Center in downtown Detroit.

The Service Center will include a 22-story office tower, three-level computer and support facility of 183,000 square feet and a five-deck parking garage. The 11½-acre site is adjacent to the Chrysler Expressway.

Completion of the entire complex is scheduled for early 1971.

Galens Ready To Ring Bells To Help Kids

Thirty-four medical students dressed in woolens and red plasti slickers, will be on Ann Arbo street corners and in shoppin centers on Dec. 6-7, armed wit buckets, Christmas-colored red an green tags, and a worthy cause They are members of the University of Michigan Medical School' Galen Honorary Society, and see support for many worthwhil projects.

A Christmas party, replete wit presents, is paid out of funds collected from "Tag Day." Teache salaries and equipment for th hospital school workshop are financed in the same manner.

This year, Tag Day takes on new significance. C. S. Mott Hospital, the new U-M center fo pediatric care, nears completion The Society has been asked to provide almost $90,000 over the nex 10 years for an intensive care unit With this objective in mind, th help of citizens, physicians, an organizations in all of Michiga is sought.

Donations are tax deductible donations and may be mailed to Ta Day, University of Michigan Medical School, Ann Arbor, Mich 48103.

For the past 41 years, the Galen have traded the bright tags fo donations. All contributions g directly toward making life at th University Hospital a little mor pleasant for the 2,500 childre who are patients each year.

"Astroman" is the symbol of the Michigan Association of the Professions, which was founded 10 years ago this month with the encouragement of the Michigan State Medical Society. "Astroman" was created by the famous Michigan sculptor, Marshall M. Fredericks, and depicts the professional man always reaching, striving to attain perfection in an environment of freedom, directed by his devotion to the highest ideals of personal service to others. See the special MAP article, beginning on Page 1476.

An antibiotic should work well in either acid or alkaline urine.

It isn't always necessary to adjust urinary pH in treating G.U. infections.

Not when the causative organism is a strain sensitive to DECLOMYCIN® Demethylchlortetracycline, as is often the case.

DECLOMYCIN remains stable and active in either acid or alkaline urine. So there's no need to acidify the urine to keep the antibiotic at work.

Why match the urine to the antibiotic...when you can match the antibiotic to the urine...by prescribing DECLOMYCIN. A b.i.d. dosage makes therapy convenient for your patient.

Effectiveness: DECLOMYCIN Demethylchlortetracycline should be equally or more effective therapeutically than other tetracyclines in infections caused by organisms sensitive to the tetracyclines.

Contraindication: History of hypersensitivity to demethylchlortetracycline.

Warning: In renal impairment, usual doses may lead to excessive accumulation and liver toxicity. Under such conditions, lower than usual doses are indicated, and, if therapy is prolonged, serum level determinations may be advisable. A photodynamic reaction to natural or artificial sunlight has been observed. Small amounts of drug and short exposure may produce an exaggerated sunburn reaction which may range from erythema to severe skin manifestations. In a smaller proportion, photoallergic reactions have been reported. Patients should avoid direct exposure to sunlight and discontinue drug at the first evidence of skin discomfort. Necessary subsequent courses of treatment with tetracyclines should be carefully observed.

Precautions: Overgrowth of nonsusceptible organisms may occur. Constant observation is essential. If new infections appear, appropriate measures should be taken. In infants, increased intracranial pressure with bulging fontanels has been observed. All signs and symptoms have disappeared rapidly upon cessation of treatment.

Side Effects: Gastrointestinal system – anorexia, nausea, vomiting, diarrhea, stomatitis, glossitis, enterocolitis, pruritus ani. Skin – maculopapular and erythematous rashes; a rare case of exfoliative dermatitis has been reported. Photosensitivity; onycholysis and discoloration of the nails (rare). Kidney – rise in BUN, apparently dose-related. Transient increase in urinary output, sometimes accompanied by thirst (rare). Hypersensitivity reactions–urticaria, angioneurotic edema, anaphylaxis. Teeth – dental staining (yellow-brown) in children of mothers given this drug during the latter half of pregnancy, and in children given the drug during the neonatal period, infancy and early childhood. Enamel hypoplasia has been seen in a few children. If adverse reaction or idiosyncrasy occurs, discontinue medication and institute appropriate therapy. Demethylchlortetracycline may form a stable calcium complex in any bone-forming tissue with no serious harmful effects reported thus far in humans.

Average Adult Daily Dosage: 150 mg q.i.d. or 300 mg b.i.d. Should be given 1 hour before or 2 hours after meals, since absorption is impaired by the concomitant administration of high calcium content drugs, foods and some dairy products. Treatment of streptococcal infections should continue for 10 days, even though symptoms have subsided.

Capsules: 150 mg; Tablets: film coated – 300 mg, 150 mg and 75 mg of demethylchlortetracycline HCl.

355-8

DECLOMYCIN®
DEMETHYLCHLORTETRACYCLINE

on NCME TV...

BETTMANN ARCHIVE

The first nationwide medical television service, NCME—The Network for Continuing Medical Education—brings you visually the important achievements of leading medical authorities. By means of closed-circuit television, this independent network provides your hospital or medical school with a complete videotape service that helps shorten the gap between new medical knowledge and its availability for clinical or teaching purposes.

The Network
for Continuing
Medical
Education

NCME TV Offers These Practical Benefits:

☐ Every two weeks a new 60-minute videotape dealing with three separate medical subjects is sent to participating institutions.

☐ Content and format of NCME telecasts fulfill criteria for postgraduate medical education, permitting American Academy of General Practice course credits under specified conditions.

☐ To help your institution make effective use of closed-circuit television, NCME offers a wide range of services and utilization aids, including:

Technical consultation in setting up a closed-circuit system; advance program information on the contents of each telecast; display units to help publicize programs; expense-paid seminars to improve utilization of medical television.

☐ NCME programs are brief and may be shown as often as desired; you can view the telecasts at times that are most convenient, without disrupting your normal schedule.

☐ Frequently NCME makes available published papers related to subjects presented on closed-circuit television.

A recent NCME hospital telecast presented Philip N. Sawyer, M.D., Professor of Surgery and Head of the Vascular Surgical Service at Downstate Medical Center, Brooklyn, N.Y., in a demonstration and evaluation of "Gas Endarterectomy."

In this program, Dr. Sawyer performs the operation on a patient with gross occlusion of the right iliac, femoral and popliteal arteries.

In Dr. Sawyer's view, gas endarterectomy has several advantages over mechanical methods: the operation can be completed faster, causes less damage to the arteries and offers a more successful outcome.

NCME is an independent network supported by Roche Laboratories to increase the use of closed-circuit TV for medical education under direct hospital and school control.

If your hospital or school does not participate in the biweekly NCME program, information on the cost-free service may be obtained by writing to
NCME, 342 Madison Avenue

BY JAMES J. LIGHTBODY, M.D.

MSMS PRESIDENT'S MESSAGE

For many years, we have had two political parties — they have been the Republican and the "Labor" Party. Labor unions have dominated the Democratic Party for too many years. The words "Liberal" and "Conservative" have been kicked around so much that we are more confused than usual about their real meaning.

Why should most of the large labor unions in this country persistently side-in with the Democrat Party and try to impress their large membership to vote Democratic in all important elections? It is obvious that the so-called "rank and file" members of unions have very little, if anything, to do with the political decisions and aspirations of their leaders. All that the union members are supposed to do is to pay their dues which are deducted from their regular paychecks and, with the assistance of the "checkoff" system, are automatically sent to the union headquarters.

The American Medical Association is not a political machine favoring either party and we can imagine what reaction the physicians of this country would have if the A.M.A. told them how to vote. It is generally agreed that the majority of physicians favor the more conservative approach to socio-economic problems of the country.

During the recent elections there was very little difference in the basic philosophy of the two main political parties as election time approached. Public opinion and expediency have much to do with the changing programs of both parties.

The recent election has proven that the Democrat Party, which traditionally was a predominant liberal philosophy, has changed its attitude because there seems to be a decreasing amount of federal funds available to pay for all of the programs sponsored by the Democratic administration. On the other hand — the Republican Party developed a semi-liberal attitude concerning some present programs and even suggested a few new ones to assist those groups of people who were economically, educationally and environmentally in the sub-standard classes.

We may eventually end up with a ten or fifteen party system that will add a little more confusion to the solitary confinement of our curtained voting booth. Anyway — ten or fifteen parties is too many — even during the Holiday Season.

Finally...a salicylate superior to aspirin?

Not at all, Doctor...but

magan®

(magnesium salicylate, W-T)

should be considered for your arthritic
and rheumatic patients who cannot tolerate aspirin.

Surveys* made in 1966 and 1967 among private practice physicians showed an incidence of intolerance to aspirin ranging from 3-85%. The majority of physicians surveyed reported an intolerance in 10-30% of their patients.

How does this compare with your experience?

WARREN-TEED PHARMACEUTICALS INCORPORATED
COLUMBUS, OHIO 43215
SUBSIDIARY OF **ROHM AND HAAS COMPANY**

10-30

*by two independent national research organizations

Don't use Magan on all your patients–

consider Magan for those patients who cannot take aspirin because of gastric discomfort

Private Practice Physicians tried Magan on almost 700 patients whom they judged intolerant to aspirin and other salicylates.

The majority of these patients could take Magan and obtain the benefit of salicylate therapy.

magan **an alternate salicylate**

(magnesium salicylate, W-T)

May be tolerated by some persons intolerant to aspirin by reason of gastrointestinal irritation.

Magan is a new salicylate product from Warren-Teed.

A single chemical entity . . . no coating, no buffering, sodium free and non-acetylated.

Composition: Each orange colored tablet contains 5 grains (approx. 325 mg) of magnesium salicylate.
Dosage: 1 or 2 tablets every 4 hours with a full glass of water.

For osteoarthritic knees, spines, shoulders, hips, etc.:

Tandearil®
oxyphenbutazone

andearil, oxyphenbutazone:
or brief summary see next page.

Geigy

TA-6006

Tandearil®
oxyphenbutazone

Contraindications: Edema; danger of cardiac decompensation; history or symptoms of peptic ulcer; renal, hepatic or cardiac damage; history of drug allergy; history of blood dyscrasia. The drug should not be given when the patient is senile or when other potent drugs are given concurrently.

Warning: This drug is an analog of phenylbutazone; sensitive patients may be cross-reactive. If coumarin-type anticoagulants are given simultaneously, watch for excessive increase in prothrombin time. Instances of severe bleeding have occurred. Persistent or severe dyspepsia may indicate peptic ulcer; perform upper gastrointestinal x-ray diagnostic tests if drug is continued. Pyrazole compounds may potentiate the pharmacologic action of sulfonylurea, sulfonamide-type agents and insulin. Carefully observe patients receiving such therapy. Use with caution in the first trimester of pregnancy, and in patients with thyroid disease.

Precautions: Before prescribing, carefully select patients, avoiding those responsive to routine measures as well as contraindicated patients. Obtain a detailed history and a complete physical and laboratory examination, including a blood count. The patients should not exceed recommended dosage, should be closely supervised and should be warned to discontinue the drug and report immediately if fever, sore throat, or mouth lesions (symptoms of blood dyscrasia), sudden weight gain (water retention), skin reactions, black or tarry stools or other evidence of intestinal hemorrhage occur. Make complete blood counts at weekly intervals during early therapy and at 2-week intervals thereafter. Discontinue the drug immediately and institute countermeasures if the white count changes significantly, granulocytes decrease, or immature forms appear. Use greater care in the elderly and in hypertensives.

Adverse Reactions: The more common are nausea and edema. Swelling of the ankles or face may be minimized by withholding dietary salt, reduction in dosage or use of diuretics. In elderly patients and in those with hypertension, the drug should be discontinued with the appearance of edema. The drug has been associated with peptic ulcer and may reactivate a latent peptic ulcer. The patient should be instructed to take doses immediately after meals or with milk to minimize gastric upset. Drug rash occasionally occurs. If it does, promptly discontinue the drug. Agranulocytosis, exfoliative dermatitis, Stevens-Johnson syndrome, Lyell's syndrome (toxic necrotizing epidermolysis), or a generalized allergic reaction similar to a serum sickness syndrome may occur and require permanent withdrawal of medication. Agranulocytosis can occur suddenly in spite of regular, repeated normal white counts. Stomatitis, salivary gland enlargement, vomiting, vertigo and languor may occur. Leukemia and leukemoid reactions have been reported. While not definitely attributable to the drug, a causal relationship cannot be excluded. Thrombocytopenic purpura and aplastic anemia may occur. Confusional states, agitation, headache, blurred vision, optic neuritis and transient hearing loss have been reported, as have hyperglycemia, hepatitis, jaundice, hypersensitivity angiitis, pericarditis and several cases of anuria and hematuria. With long-term use, reversible thyroid hyperplasia may occur infrequently. Moderate lowering of the red cell count due to hemodilution may occur.

Dosage in Osteoarthritis: Initial: 3 to 6 tablets daily in divided doses. Usually unnecessary to exceed 4 tablets daily. A trial period of one week is considered adequate to determine the therapeutic effect of the drug. Maintenance: Effective level often achieved with 1 or 2 tablets daily, should not exceed 4 tablets daily.

In selecting appropriate dosage in any specific case, consideration should be given to the patient's weight, general health, age and any other factors influencing drug response.

Availability: Tan, round, sugar-coated tablets of 100 mg. in bottles of 100 and 1000.

Say you saw it in Michigan Medicine

VIEWPOINTS

Welcome to Associate Scientific Editors

The MSMS Publication Committee is pleased to announce the formation of a board of Associate Scientific Editors. The names and addresses of the Associate Editors are listed in this and succeeding issues.

The Publication Committee has attempted to obtain Associate Editors representing geographic areas, speciality representation, medical school representation and clinical practice.

We are very happy to have such an excellent group representing *Michigan Medicine*.

Obesity Challenge

BY BROOKER L. MASTERS, M.D., CHAIRMAN
MSMS PUBLICATION COMMITTEE

As a physician are you doing the best job possible in handling obesity patients and in assuming leadership in the even broader field of nutrition?

"Middle-age obesity is said to be the major illness of our land today," writes C. F. Enloe, Jr., MD, in a recent issue of *Nutrition Today*.

Doctor Enloe then goes on to contend "that the practicing physicians' role in trying to get a firm grip on the obesity problem is less than enviable."

It seems to this observer that MSMS members and our Michigan research institutions do not focus proper attention on this common health problem and give it the attention it deserves. While we hesitate, the quacks and charlatans have moved into this field.

Doctor Enloe, in his article, "Are We Well Fed? Who Knows?," suggests several other related areas of concern. He suggests anything that can be done to improve the nutrition of the elderly is not only a moral obligation but economically wise.

We are not only concerned about nutrition of the elderly but also about the eating habits of children and young people. Often children and young people (who can afford good balanced meals) choose poor foods for their school lunch. We know that some children of the affluent often go to school with no breakfast or with a poor one. The nutritional status of our young people is so important; girls especially because they are becoming pregnant and giving birth at younger ages than a decade ago.

Physicians can and must work with dietitians and nutritionists to apply research to find out the facts; and then use our vast intellectual and physical resources to solve the nutritional problems that face too many children and adults, the elderly and poor in our communities, in Michigan, and the nation.

There Are No Short-cuts

(Editor's Note: This article appeared in a recent issue of the Genesee County Medical Society Bulletin; and was written by E. Marshall Goldberg, M.D., an associate editor.)

"It has been reliably estimated that only since the second decade of the twentieth century could a given patient consulting a given doctor reasonably hope to benefit from the encounter" . . . How things have changed!

The country doctor with his bag chock full of nostrums — most of which did little good, though, on the other hand, little harm — is a fond remembrance by many of us whose first interest in a career in medicine was kindled by the welcome sight of the venerable gentleman. He cured rarely, comforted always.

Nowadays, much more is expected. We have entered the era of a knowledge explosion. The turnover rate for new medical knowledge, 25 years in 1950, has now shrunk to five years — which, in effect, means that if any of us stopped reading and absorbing the contents of at least four medical journals a month for a five-year stretch, we would be a prime candidate for another tour of medical school.

WHY? THE PRINCIPAL reason, in my opinion, is that there are so few **totally incurable diseases anymore.** Each passing day in some medical journal published somewhere on this globe, a new mode of therapy may appear that removes one more disease process from the "certain death" category.

It is the physician's responsibility to keep up with these developments — to read *The New England Journal* as well as the *Wall Street Journal*

— and to assure such potential benefit reaches his patient sooner rather than later. It should not be inferred from this reference that only patients with rare diseases merit such diligence. One of the leading causes of hospital deaths is pulmonary emboli. New diagnostic techniques, such as lung scanning, have recently become available to permit early detection of this condition.

YET, HOW MANY physicians have made a concerted effort to familiarize themselves with both the subtle manifestations of pulmonary embolization and the usefulness and limitations of lung scans?

Multiple Myeloma, once a relentless process, has now yielded, in part, to combined therapy with such agents as cytoxan, sacrolysin, fluorides, androgens and cortisone. It remains a fatal disease, yet not totally incurable in the sense that several, reasonably comfortable years can be added to the patient's life by judicious management with these modalities.

Many state medical societies — most notably, Oregon's — have publicly recognized that a physician whose knowledge is out of date can be as much a hazard as a healer. His diagnostic acumen is the first to be tested by a patient suffering the ill-defined, early symptoms of a potentially serious disease.

IT IS NOT ENOUGH FOR him to know where he can refer the patient for "specialized" care. He must first make a tentative diagnosis; he must be truly skilled in the routine, often tedious, but indispensable art of doing a first-rate history and physical.

There are no short-cuts to this ritual; it is still at least 80 percent of the practice of good medicine. For the remainder, it is my opinion that the busy practitioner should avail himself more of the teaching program in his hospital; bend the program to fill his needs, correct the weak spots, as well as those of the fledgling house officer.

If he and a few of his colleagues feel they need a little brushing up in the latest techniques for, say, working up a patient with hypertension, he should make his feelings known to the educational director or the chief of the section rather than wait for a yearly conference on the subject.

He should be an ACTIVE rather than a passive — or worse, ABSENT — recipient of what his hospital has to offer him as a life-long student of medicine. It is unrealistic to expect to be able to catch up on all the medical advances that have been made in a year by attending a single refresher course. New knowledge, like good scotch, should be taken in small sips.

E. Marshall Goldberg, M.D.

Impotence

(Editor's Note: The following message appeared in a recent issue of the Oakland County Medical Society Bulletin.)

Once or twice a week some member of the Oakland County Medical Society stops me and asks "When is the county medical society going to ______________________?" The subjects in question run the gamut: community health, hospital politics, Medicare, Blue Cross-Blue Shield, Vietnam, etc. The answer is simple enough. Our county medical society is not an influential or potent organization and it is high time we stop having any illusions about our own importance as a political force.

Too many of our members contribute nothing to their county medical society. I can accept poor attendance at our monthly meetings as a fact of life but I cannot understand the lack of attendance at committee meetings. A year ago, I made an attempt to appoint people, including many new members, who expressed a willingness to work for the society as members of committees. Inexplicably most of our important committees are struggling along, their efforts hamstrung by less than 25 per cent participation by their members. As a case in point, several months ago our local schools asked for assistance in the area of student drug addiction. The responsible OCMS Committee met with only two of nine members present. No action was taken and the schools went elsewhere for help.

The cure for such impotence in any organization is the active and enthusiastic participation by its members.

Edwin J. Westfall, M.D.
President,
Oakland County
Medical Society

The Old Maid Still at the Keyhole

(Editor's Note: The following editorial by John S. Chapp Chaffee is reprinted from the May, 1968 issue of PENNSYLVANIA MEDICINE, published by the Pennsylvania Medical Society.)

Many years ago the renowned John B. Deaver received a phone call from one of his many referring G.P.'s. "John," said the referring doctor, "I've got an old spinster out here whom I believe has a gallstone colic. You should operate her, but they won't take my word for it. Now, if you were to come out here in consultation, you might persuade her to come to the hospital and get the operation over with."

The great Deaver went to the home accompanied by the doctor and with characteristic dignity examined the old maid. Then he asked to be excused so that he and the family doctor could discuss the case. They retired to the drawing room, closed the door and sat down. The family doctor handed Doctor Deaver a cigarette and they both lit up. After a pause, Doctor Deaver said, "Did you ever see such a homely old maid in your life?" To which the referring doctor replied, "If you think she is homely, wait until you see her sister."

At that moment, the door flew open. The enraged sister, who had been listening thru the keyhole, summarily ordered them both out of the house.

Perhaps physicians can hazard a lesson from this Philadelphia story.

A complacent medical profession irritated by the perplexities of public service, is over-confident because it is in short supply. The public, represented by the old maid, is observing us through the keyhole with a suspicious eye. It considers us a valued servant and tolerates great latitudes in our behavior. But if we are indiscreet in our professional obligations or disrespectful to our master, the public, we may awake to an enraged old lady who will toss us out or curtail our activities.

The old lady may be ever so homely, even unreasonable and we may not like her politics. Nevertheless, while being firm with her, we must patiently educate her and render her intelligent service. We must not insult her, for she is our master and we are her servants.

KNOW MICHIGAN?

Did you know that:

Two thousand Michigan firms engage in world trade.

Michigan has more fresh water than any other state. Enough fresh water for every manufacturing plant in America flows by Detroit each afternoon.

The Detroit River carries more tonnage annually than the Rhine, Seine, Thames and Volga Rivers combined. More tonnage passes through the Soo Locks in an eight months Great Lakes navigation season than through the Panama or Suez Canal in a normal year.

INGRAM'S SERVICE DEPARTMENT

ALL FACTORY TRAINED MEN

We service Medical Equipment, Electrocardiographs, Basal Metabalors, Sterilizers, Autoclaves, Diathermy Outfits, Cutting Units, Ultra Violet Lamps, Hydro Therapy Units, Laboratory Equipment. ALL BURDICK, LIEBEL FLARSHEIM AND RITTER EQUIPMENT.

If you have any Service problems, please call us at TE 2-4444, ask for the SERVICE DEPARTMENT and we will gladly help in any way we can.

Smiles speak louder than words
for the good taste of Soyalac

Milk-free, hypo-allergenic Soyalac has a pleasing taste that is eagerly accepted by most infants. It's similar to mother's milk in composition and assimilation, much like cow's milk in consistency and completely free of fibre. Extensive clinical data support Soyalac's value in promoting growth and development. Soyalac is also excellent for growing children and adults.

Dilantin®
(diphenylhydantoin)

PARKE-DAVIS

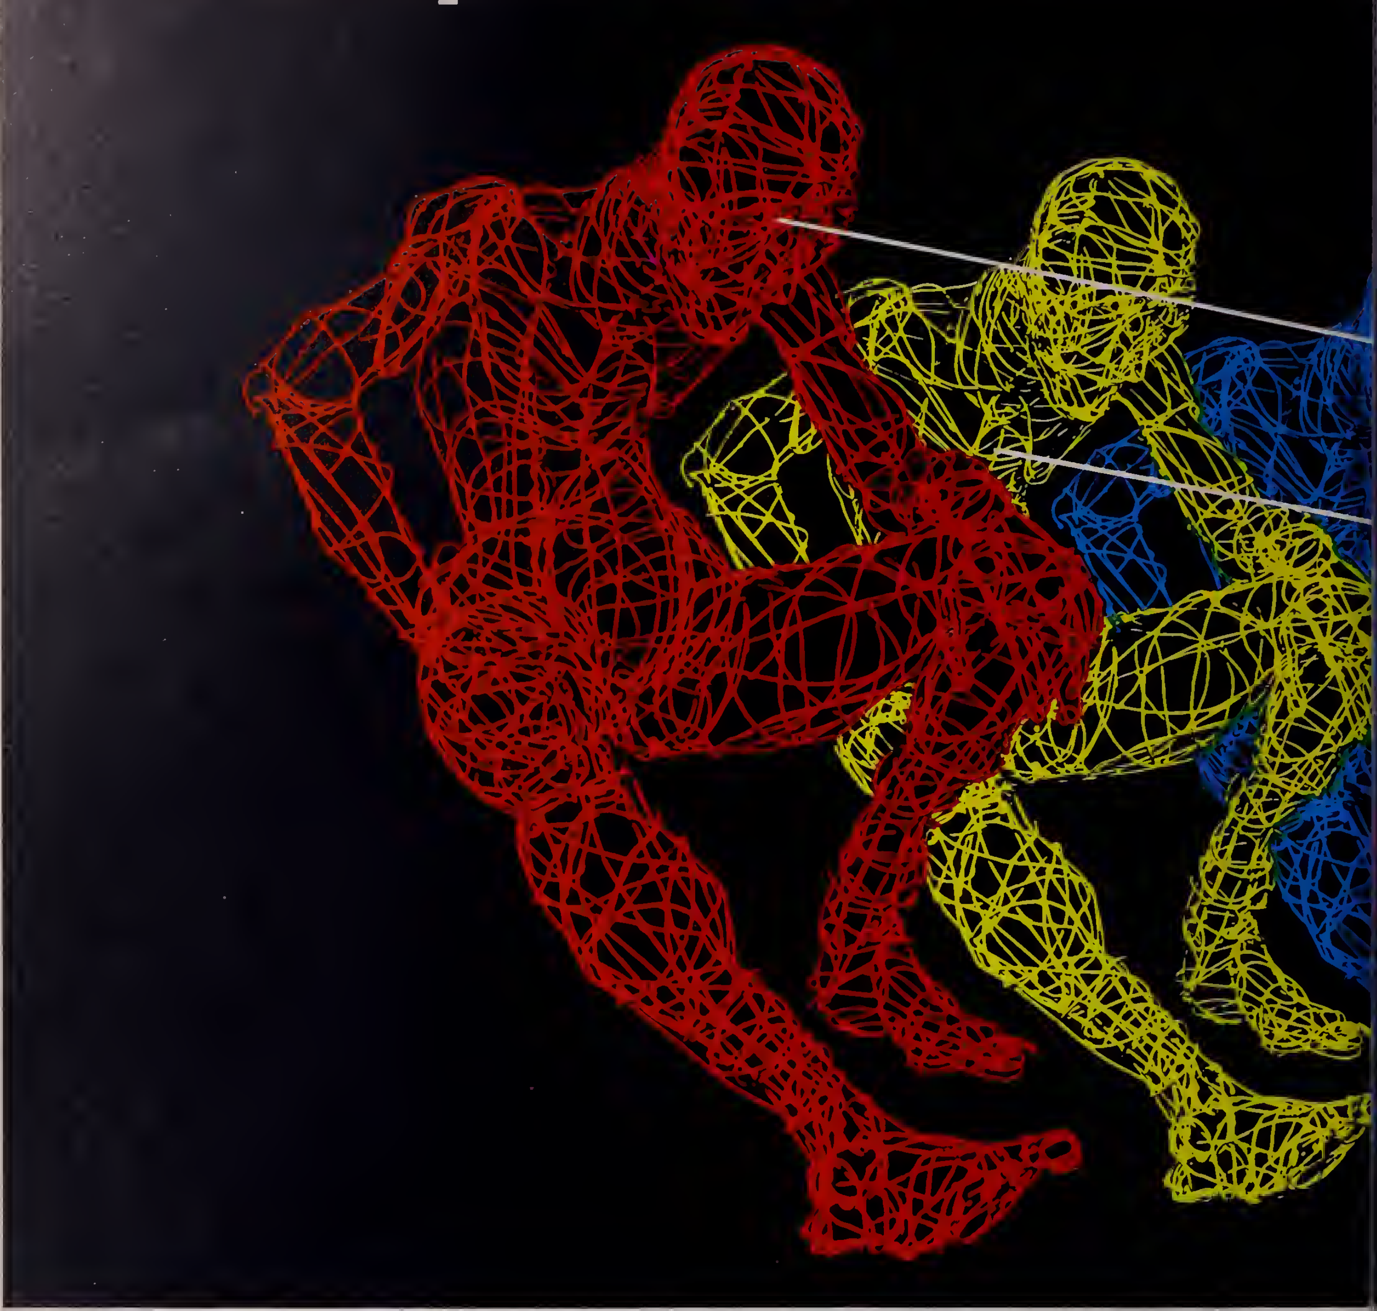
In untold thousands of epileptic patients... Dilantin has been, and continues to be, the bedrock of therapy.

DILANTIN is useful in the treatment of grand mal epilepsy and certain other convulsive states. Its use will prevent or greatly reduce the incidence and severity of convulsive seizures in a substantial percentage of epileptic patients, without the hypnotic and narcotizing effects of many anticonvulsant drugs.
PRECAUTIONS: Periodic examination of the blood is advisable. Nystagmus in combination with diplopia and ataxia indicates dosage should be reduced. The possibility of toxic effects during pregnancy has not been explored. ADVERSE REACTIONS: Allergic phenomena such as polyarthropathy, fever, skin eruptions, and acute generalized morbilliform eruptions with or without fever. Rarely, dermatitis goes on to exfoliation with hepatitis, and further dosage is contraindicated. Gingival hypertrophy, hirsutism, and excessive motor activity are occasionally encountered. During initial treatment, side effects may include gastric distress, nausea, weight loss, nervousness, sleeplessness, feeling of unsteadiness. Macrocytosis, megaloblastic anemia, leukopenia, granulocytopenia, thrombocytopenia, pancytopenia, agranulocytosis, and aplastic anemia have been reported. Nystagmus, lymphadenopathy, lupus erythematosus, erythema multiforme (Stevens-Johnson syndrome), and a syndrome resembling infectious mononucleosis with jaundice have occurred.
DILANTIN is supplied in several forms including Kapseals® containing 0.1 Gm. and 0.03 Gm. diphenylhydantoin sodium.
Parke, Davis & Company, Detroit, Michigan 48232

The color combinations of the banded capsules are Parke-Davis trademarks. The orange-banded white capsule identifies Parke-Davis 0.1 Gm. diphenylhydantoin sodium; the pink-banded white capsule 0.03 Gm. diphenylhydantoin sodium.

PARKE-DAVIS 015R67

a comprehensive hematinic



Description: Each Pulvule® contains—

Special Liver-Stomach Concentrate, Lilly (containing Intrinsic Factor)	150 mg.
Cobalamin Concentrate, N.F., equivalent to Cobalamin (The total vitamin B_{12} activity in the Special Liver-Stomach Concentrate, Lilly, and the Cobalamin Concentrate, N.F., is 15 micrograms.)	7.5 mcg.
Iron, Elemental (as Ferrous Fumarate)	110 mg.
Ascorbic Acid (Vitamin C)	75 mg.
Folic Acid	1 mg.

Indications: Trinsicon® (hematinic concentrate with intrinsic factor, Lilly) is a multifactor preparation effective in the treatment of anemias that respond to oral hematinics, including pernicious anemia and other megaloblastic anemias and also iron-deficiency anemia.

Contraindications: Hemochromatosis and hemosiderosis.

Precautions: Anemia is a manifestation that requires approp
investigation to determine its cause or causes.

In pernicious anemia, the use of folic acid without adeq
vitamin B_{12} therapy may result in hematologic remission but
rological progression. Adequate doses of vitamin B_{12} (parent
or oral with potent intrinsic factor as in Trinsicon® [hema
concentrate with intrinsic factor, Lilly]) usually prevent, hal
improve the neurological changes.

As with all preparations containing intrinsic factor, resist
may develop in some cases of pernicious anemia to the pote
tion of absorption of physiological doses of vitamin B_{12}. If re
ance occurs, parenteral therapy, or oral therapy with so-c
massive doses of vitamin B_{12}, may be necessary. No single
men fits all cases, and the status of the patient observe
follow-up is the final criterion for adequacy of therapy. Peri

You can treat combined deficiencies with

Trinsicon®

—the multifactor hematinic

Vitamin B_{12} plus intrinsic factor (15 mcg. B_{12} activity)—helps provide adequate levels of this important vitamin.

Folic acid (1 mg.)—treats nutritional macrocytic anemias and/or malabsorption syndromes.

Ascorbic acid (75 mg.)—augments the conversion of folic acid to its active form and helps iron absorption.

Iron (110 mg.)—treats hypochromic anemia.

ical and laboratory studies are considered essential and are ommended.

erse Reactions: In rare instances, iron in therapeutic doses duces gastro-intestinal reactions, such as diarrhea or constiion. Reducing the dose and administering it with meals will imize these effects.

extremely rare instances, skin rash suggesting allergy has owed oral administration of liver-stomach material. Instances apparent allergic sensitization have also been reported after l administration of folic acid.

age: One Pulvule twice a day. (Two Pulvules daily produce a ndard response in the average uncomplicated case of pernius anemia.)

Supplied: Pulvules Trinsicon® (hematinic concentrate with insic factor, Lilly), in bottles of 60 and 500. [032568]

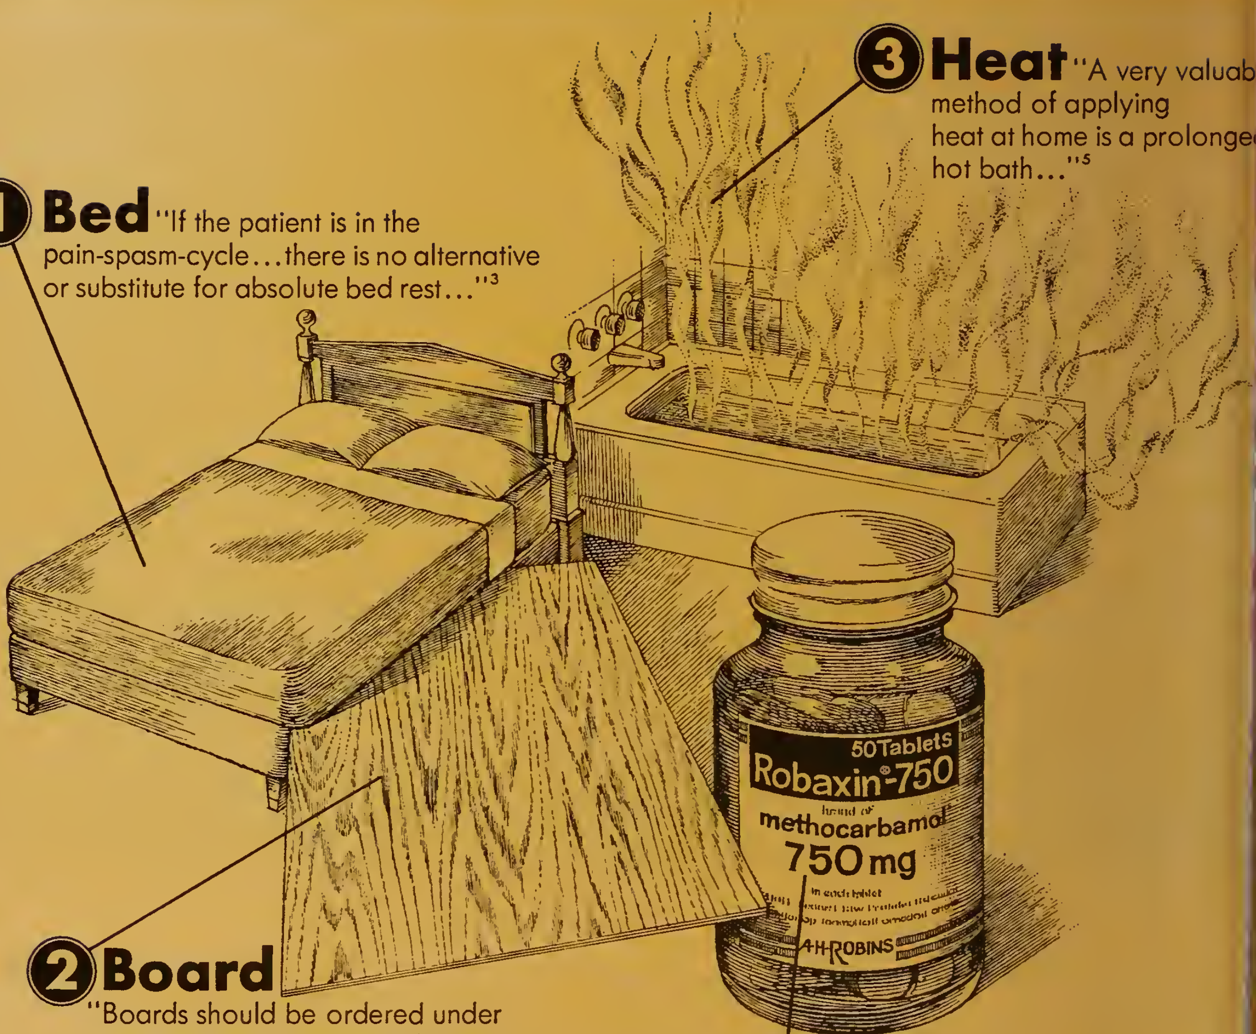
LOW-BACK PAIN

A CONSERVATIVE, FOUR-POINT PROGRAM

The low back pain that is most frequently seen in general practice is mechanical in nature, i.e., postural back pain, joint dysfunction and acute back strain.[1,2] For this type of discomfort, a conservative regimen is usually sufficient to relieve aches and pains, and to help keep the patient functioning. Components of this basic program include:



① **Bed** "If the patient is in the pain-spasm-cycle...there is no alternative or substitute for absolute bed rest..."[3]

② **Board** "Boards should be ordered under the mattress...these boards act by immobilizing the spine..."[4]

③ **Heat** "A very valuab method of applying heat at home is a prolonge hot bath..."[5]

④ **Robaxin®-750** (methocarbamol, 750 mg. capsule-shaped tablets) A well-tolerated[6] skeletal muscle relaxant, methocarbamol helps relieve spasm "...without interfering with normal tone and movement."[7] And there is little likelihood of sedation.[6]

Indicated for relief of skeletal muscle spasm. **Contraindicated** in hypersensitive patients. **Side Effects** (lightheadedness, dizziness, drowsiness, nausea) may occur rarely, but usually disappear on reduced dosage. Hypersensitivity reactions develop infrequently. See product literature for further details. **Also available:** Robaxin® Tablets (methocarbamol, 500 mg.) Robaxin Injectable (methocarbamol, 1 Gm./10 cc.) References: (1). Godfrey, C.M.: Applied Therap. 8:950, 1966. (2). Gottschalk, L.A.: GP 33:91, 1966. (3). Rowe, M.L.: J. Occup. Med. 2:219, 1960. (4). Cozen, L.: South Dakota J. Med. *18*:26, 1965. (5). Soto-Hall, R.: Med. Sc. *14*:23, 1963. (6). Weiss, M. and Weiss, S.: J. Am. Osteopath. A. 62:142, 1962. (7). Feuer, S.G., *et al.*: New York J. A-H-ROBINS A. H. ROBINS COMPANY
RICHMOND, VIRGINIA 232

n the complex picture
f moderate to severe anxiety...

ere is a new reason
r prescribing Mellaril
(Thioridazine HCl)

fectiveness in
ixed anxiety-depression

ng recognized for its usefulness in the
atment of moderate to severe anxiety,
llaril is now also known to be effective
inst mixed anxiety-depression.

en the symptoms of anxiety states are
icult to sort out—even with the most careful
bing. The patient may manifest symptoms of
tation, restlessness, insomnia, somatic
nplaints. But what of the depression that may
mixed in the total picture? It is reassuring
now that Mellaril may be prescribed—with
ng possibilities of success—when there is
iety alone or a mixture of anxiety
l depression.

Before prescribing or administering, see Sandoz literature for full product information, including adverse reactions reported with phenothiazines. The following is a brief precautionary statement.
Contraindications: Severe central nervous system depression, comatose states from any cause, hypertensive or hypotensive heart disease of extreme degree.
Warnings: Administer cautiously to patients who have previously exhibited a hypersensitivity reaction (e.g., blood dyscrasias, jaundice) to phenothiazines. Phenothiazines are capable of potentiating central nervous system depressants (e.g., anesthetics, opiates, alcohol, etc.) as well as atropine and phosphorus insecticides. During pregnancy, administer only when necessary.
Precautions: There have been infrequent reports of leukopenia and/or agranulocytosis and convulsive seizures. In epileptic patients, anticonvulsant medication should also be maintained. Pigmentary retinopathy may be avoided by remaining within the recommended limits of dosage. Administer cautiously to patients participating in activities requiring complete mental alertness (e.g., driving). Orthostatic hypotension is more common in females than in males. Do not use epinephrine in treating drug-induced hypotension. Daily doses in excess of 300 mg. should be used only in severe neuropsychiatric conditions.
Adverse Reactions: *Central Nervous System*—Drowsiness, especially with large doses, early in treatment; infrequently, pseudoparkinsonism and other extrapyramidal symptoms; nocturnal confusion, hyperactivity, lethargy, psychotic reactions, restlessness, and headache. *Autonomic Nervous System*—Dryness of mouth, blurred vision, constipation, nausea, vomiting, diarrhea, nasal stuffiness, and pallor. *Endocrine System*—Galactorrhea, breast engorgement, amenorrhea, inhibition of ejaculation, and peripheral edema. *Skin*—Dermatitis and skin eruptions of the urticarial type, photosensitivity. *Cardiovascular System*—Changes in the terminal portion of the electrocardiogram have been observed in some patients receiving the phenothiazine tranquilizers, including Mellaril (thioridazine hydrochloride). While there is no evidence at present that these changes are in any way precursors of any significant disturbance of cardiac rhythm, several sudden and unexpected deaths apparently due to cardiac arrest have occurred in patients previously showing electrocardiographic changes. The use of periodic electrocardiograms has been proposed but would appear to be of questionable value as a predictive device. *Other*—A single case described as parotid swelling.

Mellaril®
(Thioridazine HCl)
25 mg. t.i.d.

for moderate to severe anxiety and mixed anxiety-depression

SANDOZ SANDOZ PHARMACEUTICALS, HANOVER, N. J. 68-169

Q. How much does the **anticostive*** **hematinic** cost?

A. No more than costive hematinics cost!

The anticostive hematinic is

PERITINIC®

Hematinic with Vitamins and Fecal Softener

A tablet-a-day provides:

● Elemental Iron (as Ferrous Fumarate)	100 mg
● Dioctyl Sodium Sulfosuccinate (to counteract constipating effect of iron)	100 mg
Vitamin B_1	7.5 mg
Vitamin B_2	7.5 mg
Vitamin B_6	7.5 mg
Vitamin B_{12}	50 mcgm
Vitamin C	200 mg
Niacinamide	30 mg
Folic Acid	0.05 mg
Pantothenic Acid	15 mg

Bottles of 60

*

anticostive, *adj.* (*anti* opposed to + *costive* causing constipation.) Against constipation. Now isn't that a good idea in an iron-containing hematinic?

Lederle LEDERLE LABORATORIES
A Division of American Cyanamid Company
Pearl River, New York 10965

TAO®(triacetyloleandomycin)

Brief Summary

INDICATIONS: Include staphylococci, streptococci, pneumococci and gonococci. Recommended for acute, severe infections where adequate sensitivity testing has demonstrated susceptibility to this antibiotic and resistance to less toxic agents.

CONTRAINDICATIONS: Contraindicated in pre-existing liver disease or dysfunction, and in individuals hypersensitive to the drug.

PRECAUTIONS: CAUTION: USE OF THIS DRUG MAY PRODUCE ALTERATIONS IN LIVER FUNCTION TESTS AND JAUNDICE. CLINICAL EXPERIENCE AVAILABLE THUS FAR INDICATES THAT THESE LIVER CHANGES WERE REVERSIBLE FOLLOWING DISCONTINUATION OF THE DRUG.

Not recommended for prophylaxis or in the treatment of infectious processes, which may require more than ten days continuous therapy. In view of the possible hepatotoxicity of this drug when therapy beyond ten days proves necessary, other less toxic agents should be used. If clinical judgment dictates continuation of therapy for longer periods, serial monitoring of liver profile is recommended, and the drug should be discontinued at the first evidence of any form of liver abnormality. When treating gonorrhea in which lesions of primary or secondary syphilis are suspected, proper diagnostic procedures, including dark-field examinations, should be followed. In other cases in which concomitant syphilis is suspected, monthly serological tests should be made for at least four months. When used in streptococcal infections, therapy should be continued for ten days to prevent the development of rheumatic fever or glomerulonephritis. The use of antibiotics may occasionally permit overgrowth of nonsusceptible organisms. A resistant infection or superinfection requires reevaluation of the patient's therapy. In the event such occurs with this drug the medication should be discontinued, and specific antibacterial and supportive therapy instituted.

ADVERSE REACTIONS: Although reactions of an allergic nature are infrequent and seldom severe, those of the anaphylactoid type have occurred on rare occasions.

OMNI-TUSS® b.i.d.

. . . because OMNI-TUSS is indicated for cough associated with upper respiratory tract infections, bronchitis, bronchiectasis, bronchial asthma, emphysema, sinusitis and rhinitis, hay fever, or other allergic conditions. Any of these conditions may exhibit the general symptom syndrome—coughing, wheezing, bronchospasm, and tenacious mucus—which may benefit from the antitussive, bronchodilative, antihistaminic, and expectorant action of Omni-Tuss.

The therapeutic usefulness of Omni-Tuss is enhanced by a unique resin complex formulation providing the clinically desirable advantages of: (1) uniform drug availability throughout an extended period, (2) 8 to 12 hours of symptomatic control, (3) minimal dosage requirement, (4) minimal side effects.

Economical, efficient **b.i.d.** dosage—extremely well-tolerated by children, 6-12, and adults.

'Omni Tuss' Suspension: Each teaspoonful (5 cc.) contains 10 mg. codeine (Warning: May be habit-forming), 5 mg. phenyltoloxamine, 3 mg. chlorpheniramine, 25 mg. ephedrine, all as cation exchange resin complexes of sulfonated polystyrene, and 20 mg. guaiacol carbonate.

Available on prescription only. Class X exempt narcotic. Permissible on oral prescription.

Dosage: *Adults:* 1 teaspoonful (5 cc.) q12h.
Children (6-12 *years*): ½ teaspoonful q12h.

Side Effects: Minimal, but when encountered may include jitteriness, nausea, drying of mouth, insomnia, constipation, which disappear upon adjustment of the dose or discontinuance of treatment.

Precautions and Contraindications: For complete detailed information, refer to package insert or official brochure.

Strasenburgh
Strasenburgh Laboratories Division
Wallace & Tiernan Inc., Rochester, N.Y.

In peptic ulcer:

the antacid puzzle

solved by Mylanta®

aluminum and magnesium hydroxides *plus* simethicone

"will it ease the pain?"

Mylanta helps relieve ulcer pain with the two most widely prescribed antacids: aluminum and magnesium hydroxides.

will it help "my gassy stomach"?

Mylanta *also* contains simethicone: for concomitant relief of G.I. gas distress.

"will this one taste O.K.?"

The *prolonged* acceptance of Mylanta was recently confirmed in 87.5% of 104 patients—after a total of 20,459 documented days of therapy.* *Danhof, I. E.: Report on file.

Composition: Each Mylanta chewable tablet or teaspoonful (5 ml.) contains: magnesium hydroxide, 200 mg.; aluminum hydroxide, dried gel, 200 mg.; simethicone, 20 mg. *Dosage:* One or two tablets (well chewed or allowed to dissolve in the mouth) or one or two teaspoonfuls to be taken between meals and at bedtime.

Stuart Division/Pasadena, Calif.
ATLAS CHEMICAL INDUSTRIES, INC.

No two women are quite alike...

and no other oral contraceptive is quite like Ovulen-21®

Each tablet contains ethynodiol diacetate 1 mg., mestranol 0.1 mg.

The progestin is distinctive, and for some women this may mean a different clinical response. The Compack® tablet dispenser is distinctive; its functional simplicity makes it virtually patient-proof. The acceptance of Ovulen-21 is distinctive... together with Ovulen®, it is more often prescribed than any other individual contraceptive product currently available.

Indication—Oral contraception.

Contraindications—Thrombophlebitis, thromboembolic disorders, cerebral apoplexy or a past history of these conditions, markedly impaired liver function, known or suspected carcinoma of the breast, known or suspected estrogen-dependent neoplasia, undiagnosed abnormal genital bleeding.

Warnings—Watch for the earliest manifestations of thrombotic disorders (thrombophlebitis, cerebrovascular disorders, pulmonary embolism, retinal thrombosis); if present or suspected discontinue the drug immediately.

British studies reported in April 1968[1,2] estimate there is a seven- to tenfold increase in mortality and morbidity due to thromboembolic diseases in women taking oral contraceptives. In these controlled retrospective studies, involving 36 reported deaths and 58 hospitalizations due to "idiopathic" thromboembolism, statistical evaluation indicated that the differences observed between users and non-users were highly significant. The conclusions reached in the studies are summarized in the table below:

Comparison of Mortality and Hospitalization Rates Due to Thromboembolic Disease in Users and Non-Users of Oral Contraceptives in Britain.

Category	Mortality Rates		Hospitalization Rates (Morbidity)
	Age 20-34	Age 35-44	Age 20-44
Users of Oral Contraceptives	1.5/100,000	3.9/100,000	47/100,000
Non-Users	0.2/100,000	0.5/100,000	5/100,000

No comparable studies are yet available in the United States. The British data, especially as they indicate the magnitude of the increased risk to the individual patient, cannot be applied directly to women in other countries in which the incidences of spontaneously occurring thromboembolic disease may differ.

Discontinue medication pending examination if there is sudden partial or complete loss of vision, or sudden onset of proptosis, diplopia or migraine. Withdraw medication if papilledema or retinal vascular lesions are found.

Since the safety of Ovulen in pregnancy has not been demonstrated, it is recommended that pregnancy be ruled out for any patient who has missed two consecutive periods before continuing the contraceptive regimen. If the patient has not adhered to the prescribed schedule the possibility of pregnancy should be considered at the first missed period.

A small fraction of the hormone agents in oral contraceptives has been identified in the milk of mothers receiving these drugs. The long-range effect to the nursing infant cannot be determined at this time.

Precautions—Pretreatment physical examination should include special reference to the breasts and pelvic organs, and a Papanicolaou smear.

Endocrine and possibly liver function tests may be affected by Ovulen. Therefore, it is recommended that such tests if abnormal be repeated after the drug has been withdrawn for two months.

Pre-existing uterine fibromyomas may increase in size under the influence of progestogen-estrogen preparations.

Because these agents may cause some degree of fluid retention, conditions which might be influenced by this factor, such as epilepsy, migraine, asthma, cardiac or renal dysfunction, require careful observation.

In breakthrough bleeding, and all irregular vaginal bleeding, consider nonfunctional causes. Adequate diagnostic measures are indicated in undiagnosed vaginal bleeding.

Carefully observe patients with a history of psychic depression and discontinue the drug if severe depression recurs.

Any possible influence of prolonged Ovulen therapy on pituitary, ovarian, adrenal, hepatic or uterine function awaits further study.

A decrease in glucose tolerance has occurred in a significant percentage of patients on oral contraceptives. The mechanism of this decrease is obscure. For this reason, diabetic patients should be observed carefully while receiving Ovulen.

Because of the effects of estrogens on epiphyseal closure Ovulen should be used judiciously in young patients in whom bone growth is not complete.

The age of the patient constitutes no absolute limiting factor, although Ovulen therapy may mask the onset of the climacteric.

The pathologist should be informed of Ovulen therapy when relevant specimens are submitted.

Adverse Reactions—A statistically significant association has been shown between use of oral contraceptives and the following serious adverse reactions: thrombophlebitis, pulmonary embolism.

Although available evidence is suggestive of an association, such a relationship has been neither confirmed nor refuted for the following serious adverse reactions: cerebrovascular accidents, neuro-ocular lesions, e.g., retinal thrombosis and optic neuritis.

The following adverse reactions are known to occur in patients receiving oral contraceptives: nausea, vomiting, gastrointestinal symptoms (such as abdominal cramps and bloating), breakthrough bleeding, spotting, change in menstrual flow, amenorrhea during and after treatment, edema, chloasma or melasma, breast changes (tenderness, enlargement, secretion), change in weight, changes in cervical erosion and cervical secretions, suppression of lactation when given immediately post partum, cholestatic jaundice, migraine, allergic rash, rise in blood pressure in susceptible individuals, mental depression.

Although the following adverse reactions have been reported in users of oral contraceptives, an association has been neither confirmed nor refuted: anovulation post treatment, premenstrual-like syndrome, changes in libido, changes in appetite, cystitis-like syndrome, headache, nervousness, dizziness, fatigue, backache, hirsutism, loss of scalp hair, erythema multiforme and nodosum, hemorrhagic eruption, itching.

The following laboratory results may be altered by oral contraceptives: hepatic function: increased sulfobromophthalein and other tests; coagulation tests: increase in prothrombin, Factors VII, VIII, IX and X; thyroid function: increase in PBI and butanol extractable protein bound iodine, and decrease in T^3 uptake values; metyrapone test; pregnanediol determination.

SEARLE Where "The Pill" Began
G. D. SEARLE & CO., P. O. Box 5110, Chicago, Illinois 60680

If you think the pink pill for U.R.I. symptoms is built for speed and endurance you're on the right track.

Here is a tablet that begins to relieve symptoms of upper respiratory infection quickly—a tablet that works for hours to make it easy for your patient to enjoy continuous relief.

Novahistine Singlet combines effective dosage of an antipyretic-analgesic with a vasoconstrictor-antihistamine formulation to relieve not only the congestion, but also the fever and the aches and pains that almost always accompany upper respiratory infections.

A total daily dosage of 3 or 4 tablets will normally provide the continuous relief your patient expects. Use with caution in patients with severe hypertension, diabetes mellitus, hyperthyroidism or urinary retention. Caution ambulatory patients that drowsiness may result.

PITMAN-MOORE Division of
The Dow Chemical Company,
Indianapolis, Indiana.

Novahistine® Singlet decongestant-analgesic

(Each tablet contains: phenylephrine hydrochloride, 40 mg.; chlorpheniramine maleate, 8 mg.; acetaminophen, 500 mg.)

DOW

It's almost as if you were there to give an injection of penicillin

V-Cillin K®, Pediatric dependable oral penicillin therapy

Potassium Phenoxymethyl Penicillin

Description: V-Cillin K, the potassium salt of V-Cillin® (phenoxymethyl penicillin, Lilly), combines acid stability with immediate solubility and rapid absorption. Higher, more rapid serum levels are obtained than with equal oral doses of penicillin G.

Indications: Streptococcus, pneumococcus, and gonococcus infections; infections caused by sensitive strains of staphylococci; prophylaxis of streptococcus infections in patients with a history of rheumatic fever; and prevention of bacterial endocarditis after tonsillectomy and tooth extraction in patients with a history of rheumatic fever or congenital heart disease.

Contraindication: Penicillin hypersensitivity.

Warnings: In rare instances, penicillin may cause acute anaphylaxis which may prove fatal unless promptly controlled. This type of reaction appears more frequently in patients with a history of sensitivity reactions to penicillin or with bronchial asthma or other allergies. Resuscitative drugs should be readily available. These include epinephrine and pressor drugs (as well as oxygen for inhalation) for immediate allergic manifestations and antihistamines and corticosteroids for delayed effects.

Precautions: Use cautiously, if at all, in a patient with a strongly positive history of allergy.

In prolonged therapy with penicillin, and particularly with high parenteral dosage schedules, frequent evaluation of the renal and hematopoietic systems is recommended.

In suspected staphylococcus infections, proper laboratory studies (including sensitivity tests) should be performed.

The use of penicillin may be associated with the overgrowth of penicillin-insensitive organisms. In such cases, discontinue administration and take appropriate measures.

Adverse Reactions: Although serious allergic reactions are much less common with oral penicillin than with intramuscular forms, manifestations of penicillin allergy may occur.

Penicillin is a substance of low toxicity, but it possesses a significant index of sensitization. The following hypersensitivity reactions have been reported: skin rashes ranging from maculopapular eruptions to exfoliative dermatitis; urticaria; and reactions resembling serum sickness, including chills, fever, edema, arthralgia, and prostration. Severe and often fatal anaphylaxis has occurred (see Warnings). Hemolytic anemia, leukopenia, thrombocytopenia, and nephropathy are rarely observed side-effects and are usually associated with high parenteral dosage.

Administration and Dosage: Usual dosage range, 125 mg. (200,000 units) three times a day to 500 mg. (800,000 units) every four hours. For infants, 50 mg. per Kg. per day divided into three doses.

See package literature for detailed dosage instructions for prophylaxis of streptococcus infections, surgery, gonorrhea, and severe infections.

How Supplied: Tablets V-Cillin K® (Potassium Phenoxymethyl Penicillin Tablets, U.S.P.), 125 mg. (200,000 units), 250 mg. (400,000 units), and 500 mg. (800,000 units).

V-Cillin K® (potassium phenoxymethyl penicillin, Lilly), Pediatric, for Oral Solution, 125 mg. (200,000 units) and 250 mg. (400,000 units) per 5 cc. of solution (approximately one teaspoonful). [042567A]

Concerning Therapy of Candida Fungemia

BY MARY M. CARRUTHERS, M.D.
A. MARTIN LERNER, M.D.
BOTH OF DETROIT

INTRODUCTION

When Candida fungemia is found, removal of the usually culpable intravenous catheter and cessation of antibiotics are indicated. If the patient does not improve, intravenous amphotericin B is instituted.[1-4] Mortality, however, remains high.

Within a 13 month-period, we saw 9 patients with nosocomial Candida fungemias. In each, at least 2 separate blood cultures yielded Candida. Four of the patients who died had received less than 24 hours of therapy with amphotericin B. We suggest prompt institution of small doses of amphotericin when candidemia is documented.

METHODS

Patients were admitted to medical or surgical wards of the Detroit General Hospital. Initially isolations of Candida were made in tryptose phosphate broth. Later, urine, swabs from the throat, feces, or pleural fluids were cultured on Sabouraud's agar. Subsequently, all Candida were transferred to eosin methylene blue (EMB) and Sabouraud's agar. Species were suspected by colonial morphology on EMB agar and characteristics of growth in broth. In most instances fungi were further delineated by biochemical reactions.

CLINICAL FINDINGS (SEE TABLE)

Characteristics of illness are presented in the table. Patients were 18 to 60 years old with a mean of 46 years. Five were women. Cases occurred during every season. Five were chronic alcoholics with abnormal liver function. One was in hepatic coma, and another had marked ascites. One had chronic renal disease with azotemia; 2 others had transiently elevated values of blood urea nitrogen which returned to normal before the onset of their candidemia. Two patients had diabetes mellitus, but their metabolic acidosis was probably renal. Other conditions necessitating hospitalization were empyema, peritonitis, a burn to 30% of the skin, and meningovascular syphilis. None of the patients had malignancies or had received immunosuppressive drugs. One had had corticosteroids. Antibiotics were used by mouth (5 patients) or parenterally by muscle (6 patients) or vein (5 patients). One patient had received 5 agents; three, 4 separate drugs; one, 3 drugs; and one, 2 drugs. Three patients received 1 antibacterial agent. These drugs (ampicillin, cephalothin, chloramphenicol, colistimethate, kanamycin, neomycin, penicillin G, streptomycin, sulfamethoxazole and tetracycline) were given for continuous periods of 6-39 days. Only a 55 year old woman entering in hepatic coma had received neomycin alone by mouth for less than a day. When candidemia was initially documented, all patients were receiving intravenous infusions and most of them by catheter.

Peaks in oral temperature were 102-103°F in 2 patients and 103-106°F in the rest. Moderate to marked anemias (6.5-9.5 gm/100ml) were present in 7 of the 9 patients before onset of fungemias. During candidemias most patients had leukocytoses and all had "shifts to the left." Although 2 patients had initial values of blood urea nitrogen which were transiently over 100 mg%, these returned toward normal before fungemia ensued. Both patients survived. In 3 of the fatal cases progressive azotemia accompanied fungemia. None of these patients had preexisting renal disease, and this organ failure seemed directly related to their candidemias. Serum glutamic oxalacetic transaminases were moderately elevated (less than 200 units) in 2 patients. Four patients with cirrhosis of the liver and one with peritonitis had rises in total bilirubin (2-12 mg/100 ml). Alkaline phosphatase levels were 6.8-26.2 Bodansky units in 3 patients. Hypoalbuminemia (less than 2.5 gm/100

* These included ampicillin, cephalothin, chloramphenicol, colistimethate, kanamycin, neomycin, penicillin G, streptomycin, sulfamethoxazole, and tetracycline.

† All patients received intravenous fluids.

ml) was present in 3 patients, while 5 had hyperglobulinemia (over 3 gm/100 ml). All of these abnormalities in liver function antedated fungemia. Of 5 urines which were examined at times of fungemia, yeast was seen twice.

Species of *Candida* in the blood were *albicans* (4 patients), *tropicalis* (1 patient) and *parakrusei* (1 patient). Three candidemias were species other than *albicans,* but were not further characterized. Every *C. albicans* fungemia was fatal, while 2 of 3 patients with species other than *albicans* and the single patient with *C. tropicalis* sepsis recovered. The *C. parakrusei* infection was also fatal. Urines were cultured in 3 patients and in each, Candida was found. When feces was cultured (twice) or the throat (once), samples yielded Candida. Finally, a *Pasteurella multocida* empyema was superinfected with Candida. Usually within 48 hours blood cultures were positive. Fungemias were repeatedly documented and with a single exception, candidemias were found on at least 2 separate days. Four to 6 cultures from blood were positive in 5 patients, 3 positive in 3 patients and 2 positive in 3 patients. Candidemia was documented for less than 24 hours in 1 case and for 2-12 days in the other 8. Five of 6 patients died whose fungemias were documented for 3 days or less, while 2 of the 3 patients whose fungemias were documented for 7 or more days survived. After the first isolation of Candida from blood, 1 patient lived less than 48 hours while 5 others survived 3-16 days.

TABLE/Continued

C. COURSE

Duration of documented candidemia	total pts/deaths

None	4/3
< 24 hours	1/1
48 hours-6 days	4/2

E. DURATION OF ONSET OF CANDIDEMIA TO DEATHS

2 days	1 patient(s)
3 "	1 "
5 "	1 "
9-16 "	3 "
living	3 "

Four patients received no amphotericin B. Three of them died. A 60 year old woman with cirrhosis and *P. multocida* empyema received a single infusion of 15 mg of amphotericin B. before her demise, while 2 of the patients receiving longer courses survived. In 2 of the survivors, initiation of therapy with an initial dosage of 5 mg amphotericin B promptly cleared the blood of fungi. In both patients, where candidemia had previously been found for periods of 48 hours and 7 days respectively, amphotericin B in daily infusions of 15-30 mg was continued for 6 days. Cessation of candidemia in at least one patient, a 45 year old man with pyelonephritis and diabetes mellitus, was not the result of removal of an intravenous catheter. A hectic fever and leukocytosis continued for 2 weeks after intraveous fluids, and all antibiotics were discontinued. *C. tropicalis* fungemia was documented on 4 separate occasions over a 7 day period. After administration of amphotericin B, fungemia ceased.

COMMENT

These patients with candidemias were all debilitated. However, hepatic and renal diseases, diabetes mellitus or other conditions were stable when high fevers and leukocytoses appeared. All had been given intravenous infusions usually by an indwelling catheter. All but one* of the patients had received at least one broad-spectrum antibiotic. *C. albicans*[5] was most virulent, and all of these patients died. Three of the 5 patients with species other than *albicans* recovered. Oligemia or rising azotemia occurred in 3 of the fatalities.

Amphotericin B is indicated in candidemia only after antibiotics are discontinued and infected catheters removed. In one of our patients, candidemia continued for at least 8 days following cessation of intravenous and antibacterial therapy. In 2 of the survivors when amphotericin B was promptly administered small amounts of drug rapidly ended the fungemia. In these amounts there was no toxicity from amphotericin B.

Candida are readily recoverable with routine bacteriologic media from the blood and rarely are contaminants in this site. Yeast probably originated from infected phlebitic veins in patients with intravenous catheters. However, spontaneous gram-negative bacillemias occur in cirrhotics,[6] and although similar candidemias especially in these patients who lack a circulating globulin lethal for *C. albicans* are possible*[7] this remains conjecture. Systemic candidiasis in man may be remarkably similar to the murine model. In both, the kidney is the most vulnerable organ and rapidly progressive renal failure the mode of death. In the mouse after candidemias of 24-30 hours, microabscesses are found in the liver, pancreas, heart, skeletal muscle, and kidney. Occasionally rupture of the fungus into the lumina of the nephron occurs. Within the urine (free of protective globulins in serum) fungi multiply rapidly forming long invasive hyphal elements. Lesions in other organs invariably regress, but occasional recurrent interstitial invasion by hyphae leads to large and lethal cortical and medullary abscesses.[8] An objective of therapy may be to prevent such secondary hyphal invasion of the kidney. Gross and microscopical abscesses in the kidney and brain were demonstrated in one of the fatalities.

---

*This patient was receiving 30 million units of intravenous penicillin G daily.

Candidemia should be considered in any patient developing a fever and leukocytosis with an intravenous catheter, especially while receiving antibiotics. The catheter should be removed. A single positive blood culture for Candida suggests that amphotericin B be initiated. Infusions of 15-30 mg daily for about a week have no toxicity, and may be life-saving.

SUMMARY

Nine patients with candidemias were seen at the Detroit General Hospital within 13 months of 1966-67. All had chronic underlying illnesses requiring hospitalization. Hectic fevers and leukocytoses with "shifts to the left" heralded fungemias. Most of the patients had intravenous catheters, and all were receiving antibacterial agents. Corticosteroids were administered to one, but none received immunosuppressive drugs. None had malignancy. Six died after illnesses of 48 hours to 16 days. In at least one of the survivors small doses of amphotericin B induced a prompt remission which did not follow removal of an intravenous catheter and cessation of antibacterial agents.

Since removal of the intravenous catheter followed by a period of observation is not always successful, it is suggested that 15-30 mg of amphotericin B intravenously should be promptly administered when candidemia is confirmed.

Editorial Comment:

Candida is ordinarily a benign fungus of little consequence. Two factors in modern medical therapy appear to be unleashing a potential danger. These two factors are the use of antibiotics and indwelling catheters. The authors point out warning signs of Candida fungemia, laboratory detection and the need for specific therapy.

*Patients with diabetic or renal acidosis as well as others with systemic candidiasis are also deficient in this substance.

Clinical Pathological Conference

This Clinical Pathological Conference at Munson Medical Center, Traverse City, was edited by Richard Wunsch, M.D., Michigan Medicine Associate Scientific Editor of Traverse City

A 56-year-old woman came to the hospital because of fatigue, chronic cough, and hypertension.

During the three years before admission, the patient was aware of progressive fatigue, severe enough to prevent her from performing ordinary household tasks or from walking one to two blocks. Within the last month she developed a persistent non-productive cough and X-rays showed only increased bronchovascular markings. The patient had had hypertension and during a physical examination approximately eight months previously, the blood pressure was 240/130 mm. Hg. Quinidine controlled episodes of tachycardia and auricular fibrillation.

The patient denied pain associated with fatigue. There was no intolerance to cold or heat nor had there been episodes of paroxysmal nocturnal dyspnea. The patient stated that she had had rheumatic fever approximately 20 years ago and ascribed occasional pain in both ankles as an aftermath of that disease. The patient developed what she termed "butterflies" in the abdomen and there were occasional bouts of constipation.

A brother of the patient has diabetes mellitus and another brother and her mother died of coronary thrombosis.

PHYSICAL EXAMINATION

The patient was alert but replied rather slowly to questions. Blood pressure, 148/80, pulse 60 per minute, respirations 20 per minute, weight 179 lbs. There was a suggestion of fullness when examining the thyroid, but nodules were not palpable. The left border of cardiac dullness extended to the left anterior axillary line. The rhythm was normal and a Grade II systolic murmur was heard over the apex and to a lesser extent at the base of the heart. Lungs were clear to percussion and ausculation. Abdominal, pelvic and rectal examinations were normal. The skin felt dry and thickened but there was no edema. The neurologic examination was within normal limits although ankle jerks were not elicited bilaterally.

INITIAL LABORATORY DATA

C.B.C.: Hemoglobin, 15.5 gm/100 ml.; wbc, 13,500 per mm^3 with 8% bands, 63% segs, 1% eosinophils, 3% basophils, 22% lymphocytes, and 3% monocytes.

Urinalysis: Specific gravity 1.012 albumin, trace; other chemical tests normal, 3 to 5 white blood cells per high power field on microscopic examination.

Chemical testing: fasting blood sugar, 92 mg/100 ml; blood urea nitrogen, 45 mg/100 ml; total protein 6.6 G/100 ml; protein electrophoresis, albumin 3.3 G., alpha one 0.03 G., alpha two 0.08 G., beta 0.7 G., and gamma 1.3 G. (all values were within normal limits although the gammaglobulin fraction was at the higher range of normal).

Maurice Pelto, M.D.,
Radiology Department

X-RAYS

A limited number of radiologic examinations were available. The first, a chest, showed mild to moderate cardiomegaly with left ventricular prominence, and a prominent aortic arch. The hilar shadows were minimally prominent apparently on the basis of enlarged main pulmonary arteries. **(Figure 1)**

Subsequent cardiac films, taken three days later, including obliques with barium, confirmed the prominent aortic arch. Fluoroscopy showed pulsation of the hili favoring prominent pulmonary arteries. They had a somewhat rounded appearance and one could not exclude adenopathy. The enlarged aortic arch with its increased pulsations made

---

About the Hospital:

This CPC is from the Munson Medical Center, a nonprofit community hospital at Traverse City, a city of 20,000 on Grand Traverse Bay. The hospital, which serves as a referral center for the area, has 250 beds and a training program with rotating internships.

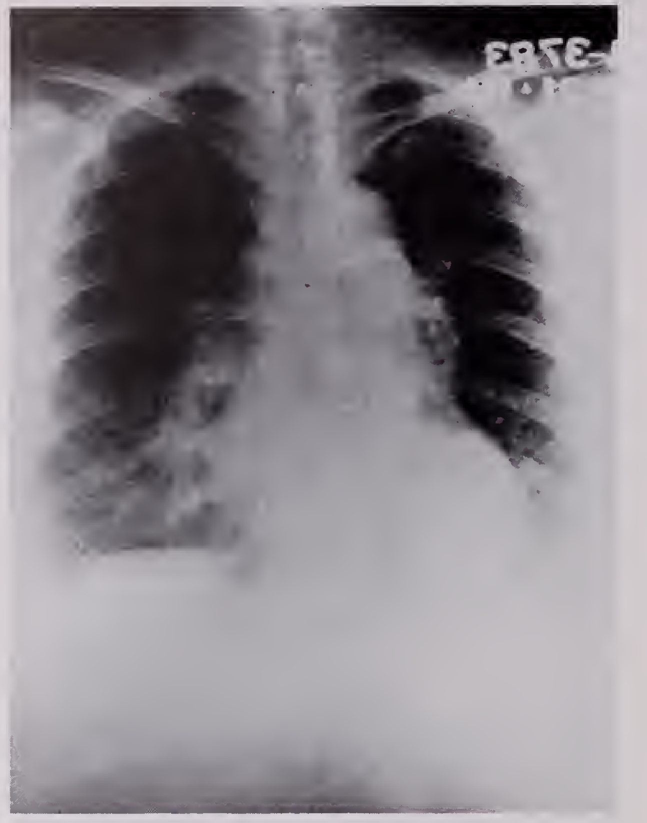

Figure 1

adequate evaluation and differentiation difficult. Laminograms added no further information. An IVP at the time showed mild delay in contrast excretion bilaterally, and was otherwise normal. There was splenomegaly of moderate extent.

Because of the confusion concerning the hili, a miniature chest film taken four years previously was obtained. This showed a similar degree of cardiac enlargement and hilar prominence. In summary, the radiographic examinations showed a moderate cardiomegaly with a widened thoracic aorta, which pulsated prominently. The hili were prominent, the appearance favoring enlarged main pulmonary arteries, with no change in four years.

The kidneys showed mild decreased excretion of dye. There was moderate splenomegaly.

HOSPITAL COURSE

The patient's condition remained unchanged. Additional laboratory studies included: serum calcium 11.9 mg/100 ml. phosphorus 3.3 mg/100 ml., fasting blood sugar 136 mg/100 ml, serum chloride 104 mEq/l, sodium 149 mEq/l, and potassium 4.1 mEq/l. White blood count 18,600 per mm^3 with a normal differential.

Early in the morning of the 10th hospital day she complained of nausea and vomited undigested food. Severe abdominal pain developed and the temperature rose to 101° F. Serum amylase was 2,250 Somogyi units. Serum electrolyte values were in the normal range. Intravenous fluids were administered because of clinical dehydration. On the 11th day, the temperature rose to 106° F. and a repeat serum amylase was 1,330 Somogyi Units. Blood pressure decreased gradually to 86/56 mm. Hg. and the patient was placed in an oxygen tent because of cyanosis. On the 12th day her condition remained critical and urinary output diminished to less than 500 ml. for 24 hours. Serum sodium was 118 mEq/l, chloride 84, potassium 6.9, serum calcium 9.2 mg/100 ml., carbon dioxide content 21.3 mEq/l, serum bilirubin 6.8 mg/100 ml. with a direct fraction of 4.8 mg/100 ml. The temperature remained elevated in the range of 104° to 105° F. She became unresponsive and died on the 12th hospital day.

* * *

DISCUSSION

* * *

Jerold Harwood, M.D.,
Department of Medicine

Fatigue apparently consisting of asthenia and myasthenia was the chief complaint at the time of admission of this middle-aged woman. The protocol does not describe the course of hypertension but does note the occurrence of paroxysmal arrhythmias. The exertional dyspnea and persistent cough suggested mild congestive heart failure. The history of acute rheumatic fever was poorly documented and consists only of sore ankles which had persisted for 20 years. Hypertension and a family history of diabetes mellitus and coronary artery disease established a good background for the presence of arteriosclerotic heart disease.

The physical examination was surprising in that the blood pressure was normal and there were no findings of congestive heart failure except cardiac enlargement. No stigmata of sustained hypertension were described. No neuromuscular abnormality was described except depressed tendon reflexes. The localized thyroid enlargement was interpreted as non-adenomatous for unknown reasons. Laboratory tests established the presence of azotemia, hypercalcemia, hyperglycemia and perhaps a mild hypergammaglobulinemia. The urinalysis did not reflect the severity of the uremia. The chest x-ray was described as showing generalized cardiac enlargement with aortic and pulmonic artery prominence interpreted as aortic valve disease and pulmonary hypertension.

Her terminal course was marked by the development of an acute abdomen with hyperamylasemia, direct hyperbilirubinemia and shock. The sodium, chloride and calcium were all observed to decrease during this period.

The definable problems were the 1) hypercalcemia, 2) acute abdomen, 3) uremia, 4) hypertension, and 5) cardiac enlargement.

Diagnosis of the hypercalcemia was difficult because of only a single phosphorus determination and no alkaline phosphatase measurement. Hypergammaglabulinemia, proteinuria, and a normal serum phosphorus suggested multiple myeloma. The hypergammaglobulinemia of multiple myeloma is usually more dramatic and occurs as a monoclonal spike on electrophoresis. Anemia and rouleaux formations are both manifestations of bone marrow replacement with cells producing abnormal globulin and are not described on our protocol. Sarcoidosis was a possible cause of the hypercalcemia, hypergammaglobulinemia and arthralgias. No hilar or peripheral adenopathy, pulmonary infiltrates or erythema nodosum were present. Minimal pulmonary sarcoidosis can cause a diffusion defect[2] but not pulmonary hypertension.

A history of upper gastrointestinal symptoms suggested the possibility of milk alkali syndrome but would not cause elevation of the serum phosphorus. No history of vitamin D ingestion was available as a possible source of hypercalcemia and this also should cause hyperphosphatemia. Chronic renal insufficiency can result in sustained parathyroid stimulation with the late development of hypercalcemia but always in the presence of, and because of marked hyperphosphatemia. Acute osteoporosis of disuse can not be implicated as a cause of hypercalcemia here. Hyperparathyroidism can not be excluded as the cause of her hypercalcemia. A single normal serum phosphorus does not rule out hyperparathyroidism and multiple phosphorus determinations may be required to demonstrate the hypophosphatemia. I have seen more than one surgically proven hyperfunctioning parathyroid adenoma accompanied by a normal serum phosphorus at the time of admission. The serum chloride of 104 mEq/l is highly suggestive of hyperparathyroidism opposed to hypercalcemic sarcoidosis in which the serum chloride is usually less than 102 mEq/l[9]. Studies of tubular reabsorption of phosphorus would not be of value in this case because of the impaired renal function.

The terminal event was quite dramatic and with its rapid downhill course, acute abdomen, shock, amylasemia and direct hyperbilirubinemia was strongly suggestive of an acute necrotizing pancreatitis. Acute pancreatitis is quite common (12%)[4] in the presence of hyperparathyroidism and may be the presenting event. A decrease in serum calcium due to diminished gastrointestinal absorption occurs in acute pancreatitis and usually parallels the severity of the pancreatitis. This phenomenon is so common that the presence of a normal serum calcium in the presence of acute pancreatitis is highly suggestive of hyperparathyroidism.[6] Acute pancreatitis is uncommon in hypercalcemia not due to hyperparathyroidism and the only case which I have read of was with a multiple myeloma.[1] Pancreatitis may be secondary to uremia of any cause and this should be kept in mind.

Carcinoma of the pancreas secreting a parathormone-like substance resulting in a hypercalcemia is conceivable but I'm not aware of any previously reported cases.

It is difficult to determine the duration of the uremia. Her longstanding, non-specific fatigue could be attributed to it, but chronic renal insufficiency would be expected to have a more striking hyperphosphatemia, hyperkalemia, anemia, hyposthenuria and albuminuria. Chronic glomerulonephritis and pyelonephritis would be expected to follow the latter course. Myeloma kidney or a kidney with glomerular and tubular dysfunction secondary to paramyloid deposits could cause this picture. Apparently benign essential hypertension can result in arteriolonephrosclerosis severe enough to cause renal failure. Renal failure secondary to heart disease is usually precipitated by a marked fall in cardiac output severe enough to cause shock and/or gross pulmonary and/or peripheral edema. No hematuria was present to suggest a primary arteritis which could also cause an acute intestinal event. Hypercalcemic nephropathy may be insidious in its onset and progress to terminal renal failure with a relatively normal urinalysis[3] and no roentgenological evidence of nephrolithiasis or nephrocalcinosis.[5]

The possibility of hyperparathyroidism looks quite strong. If one endocrine adenoma is present, I had best look for another one. Pheochromocytoma has a known association with parathyroid adenoma[7] and would explain the hyperglycemia, intermittent hypertension, paroxysmal arrhythmias and weakness and nervousness. Against this diagnosis is the body weight of 179 pounds which is quite husky for pheochromocytoma. Aldosteronism could account for hypernatremia, hyperglycemia, myasthenia and hypertension, but the normal-to-elevated serum potassium is against this diagnosis. The nephropathy of Conn's syndrome is almost always limited to impaired tubular function with hyposthenuria due to hypokalemia. Essential hypertension or renovascular disease with secondary hypertension are impossible to exclude. Renovascular disease with hypertension is unlikely in that the hypertension is not progressive and apparently preceded the renal disease.

The cardiac enlargement was one of the most difficult aspects of the problem. Arteriosclerotic heart disease unrelated to the other events would be expected to cause angina and more classical congestive heart failure. No physical findings of left ventricular hypertrophy were described so I will assume that the heart was dilated rather than hypertrophied. As mentioned before, it is hard to implicate sarcoidosis. Sustained catecholamine release from a pheochromocytoma can cause myocardopathy. Pheochromocytoma can also metastasize to heart and cause apparent valvular abnormality. Rheumatic heart disease with aortic stenosis and mitral insufficiency could result in the vascular changes described but does not relate to any other of her disease processes. Congenital heart disease with a left to right shunt and secondary pulmonary hypertension would not be expected to have hypertension or aortic prominence. Hypercalcemia can result in aortic valvular calcification and a myocardopathy which is as acceptable as any of the other etiologies mentioned. Cardiac amyloidosis secondary to multiple myeloma could also cause bizarre cardiopulmonary findings including aortic disease, arrhythmias and right sided dilatation with minimal pulmonary disease.

If the patient has a concurrent parathyroid adenoma and pheochromocytoma, the literature says that she must also have medullary carcinoma of the thyroid,[7] and this would account for the enlarged thyroid isthmus.

My diagnosis is Sipple's syndrome[8] or parathyroid adenoma — pheochromocytoma and medullary thyroid carcinoma with secondary acute pancreatitis, myocardopathy and hypercalcemic nephropathy. Second choice is multiple myeloma with hypercalcemia and secondary amyloidosis.

Laurence P. Skendzel, M.D.,
Department of Pathology

AUTOPSY REPORT

Outstanding gross and microscopic features were seen in the lungs, lymph nodes, pancreas and kidneys. The lungs were not remarkable grossly, but microscopic sections showed non-caseating granulomas composed on multi-nucleated giant cells surrounded by fibrous tissues. There was also an infiltrate of chronic inflammatory cells, chiefly lymphocytes. Sections through hilar lymph nodes showed similar microscopic findings, namely non-caseating granulomas, and in one of these, an asteroid body was seen. Stains for acid fast organisms and fungi were negative.

The pancreas was removed with difficulty because of adherence of its surface to the mesentary and loops of small and large intestine. The peritoneal surface overlying the pancreas was discolored and dark red; and there were numerous bright yellow foci of fat necrosis. The weight of the pancreas was 300 grams and included a moderate amount of soft tissue surrounding the head. Cut section showed discrete pancreatic lobules but the major portion of the pancreas was mottled red and green with a loss of normal architecture. Microscopic sections confirmed the gross impression of acute necrotizing pancreatitis.

Microscopic section of kidney showed focal glomerular thickening characterized by irregular deposits of pink staining material. Congo red and crystal violet stains were negative and ruled out the possibility of amyloidosis. The homogenous refractile material was positive with PAS stains. Microscopic findings were those of a focal glomerulonephritis characterized by thickening of glomerular walls. There also were calcific deposits in the interstitium of the kidney and arterioles were thickened considerably with narrowing of the lumens. The glomerular lesions were not classified. Focal glomerulonephritis can occur as a complication of a great variety of infections, chemical poisoning, or an allergic reaction to drugs. The thyroid was not enlarged nor were microscopic sections unusual. Only two parathyroids were identified at the time of autopsy and they were not enlarged.

The heart weighed 460 grams and the right ventricular wall was 0.4 cm. thick and the left ventricular wall, 1.2 cm. thick. Cross sections of the coronary artery shows that the lumens were patent. Microscopic sections of the heart were not remarkable. On examination of the lung, focal arteriosclerosis was noted in the pulmonary arteries. There was no significant enlargement of the major pulmonary arteries at the hilum.

The microscopic findings in the lungs and lymph nodes were consistent with sarcoidosis. We attributed hypercalcemia to sarcoidosis and the serum calcium concentration decreased with the onset of acute pancreatitis. We were aware of the association between hyperparathyroidism and pancreatic disease, but a review of the literature does not reveal a correlation between sarcoidosis and acute pancreatitis.

FINAL ANATOMIC DIAGNOSES:

1. Sarcoidosis involving lungs and hilar lymph nodes.

2. Acute necrotizing pancreatitis with fat necrosis of peri-pancreatic tissue, omentum, and mesentary of small and large intestine.
3. Focal glomerulonephritis.
4. Arteriolar nephrosclerosis.
5. Enlargement of the heart, slight, weight 460 grams.

FURTHER DISCUSSION

A physician:

In retrospect, what clues suggested the diagnosis of sarcoidosis?

Doctor Harwood:

Hypergammaglobulinemia and hypercalcemia would make you consider this diagnosis. The features against sarcoidosis are the elevated serum chloride level, about 104 mEq/l, the fact that acute pancreatitis has not been described in association with sarcoidosis. This would be a reportable case except for the fact that all the parathyroid glands were not identified.

A physician:

We are aware of the association of parathyroid tumors in pancreatitis, and one wonders if the high calcium level is responsible for acute pancreatitis?

Doctor Harwood:

Acute pancreatitis associated with hyperparathyroidism is due to a direct action of parathyroid hormone on trypsin activation in the pancreas. The calcium level is not responsible for the acute pancreatitis.

Doctor Pelto:

I'm wondering if the prominence in the hilar regions were lymph nodes instead of pulmonary arteries. I have a feeling that the one feature that led the Discussant astray is the confusion of enlarged pulmonary wessels with hilar adenopathy.

Doctor Skendzel:

There was no enlargement of the pulmonary arteries. The autopsy protocol does not include the measurement of lymph nodes, but I assume that they were enlarged.

A physician:

I have a young woman with asymptomatic sarcoidosis and a proven Kviem test. Chest X-Rays on two occasions have shown prominent pulmonary arteries.

A physician:

One interesting feature that I have seen before in sarcoidosis is dyspnea which can not be explained on the basis of pulmonary findings. The enlarged spleen noted on the I.V.P. is another possible clue of sarcoidosis.

Doctor Harwood:

Pulmonary function tests would have been extremely valuable in this case. In the *"Annals of Internal Medicine"* a study showed that with either minimal sarcoidosis or extensive sarcoidosis which has been treated and dissolved, there is a persistent pulmonary defect even though the pulmonary architecture is not remarkable.

The Physician as a Life-Long Student

BY MILFORD O. ROUSE, M.D.
AMA PAST PRESIDENT
DALLAS

The true physician is a student as long as he accepts the responsibility of practicing medicine. Even if the store of medical knowledge were not doubling every ten years — as has been estimated, it would be impossible for any human brain to absorb and retrieve all of the scientific knowledge requisite for the "complete" practice of medicine. The physician, therefore, learns the essentials or fundamentals of medicine and where to go for special information, and then relies on his judgment and his sincere desire to "keep-up" to enable him to continue to meet faithfully his obligation in handling the problems of health of his fellow citizens.

Therefore, postgraduate or continuing education is a vital necessity for every physician.

In addition to the every day opportunity to learn from his patients and from his fellow physicians, a doctor should also have a definite program of continuing education by scientific reading. His county medical bulletin, his state medical journal, the Journal of the American Medical Association, his specialty journal (if he is in a specialty) ought to be the minimum — with at least a couple of hours set aside each week to at least scan through these journals.

The scientific programs of his county society; annual meeting of his state association; the annual and clinical sessions of the AMA and the meetings of his specialty groups afford a wonderful opportunity to get a condensed review of both fundamentals and advancements in the fields in which the physician is particularly interested.

The American Academy of General Practice set the first example of requiring a minimum amount of postgraduate work as a basic requirement for continued membership in the organization, and other medical groups are considering the same principles. Most of our medical schools have excellent programs of continuing medical education, and many specialty groups sponsor one week or more organized postgraduate work one or more times each year.

One interesting advance has been the utilization of closed circuit television — not only from hospital or medical school to assembly hall or hotel room during medical meetings, but now from a medical center to a county medical society, as was recently successfully demonstrated between the Southwestern Medical School Faculty in Dallas and a group assembled at Sherman, Texas, for the Blackford Memorial Lectures, where a clinical pathological conference was staged in the most successful and interesting manner, with questions and comments both from the audience in Sherman and the team in Dallas.

The American Medical Association is working on plans of formal recognition of regular postgraduate work by physicians, probably as a plaque to go on the physician's wall.

Meanwhile, the true physician regards continuing medical education not only as an obligation, but as a tremendously interesting privilege.

(Editor's Note: This article was prepared by Doctor Rouse especially for Michigan Medicine).

Tumors of Major Salivary Glands In Children

BY KLAUS HOFFMANN, M.D.
MELVIN A. BLOCK, M.D.
BOTH OF DETROIT

Except for hemangioendotheliomas, angiomas, and other congenital lesions which usually are evident during the first year of life, the spectrum of disease processes producing tumors of the major salivary glands in children is similar to that in adults.

Our experience emphasizes that unless management of salivary gland lesions in children follows the principles established for their proper treatment in adults, recurrence rates and the incidence of poor therapeutic results are high. Thus, tumors of the parotid gland in children require more than a local excision; i.e., at least a partial or superficial parotidectomy should be performed.

MATERIALS AND METHODS

In a review of the experience with lesions of the major salivary glands at the Henry Ford Hospital from 1944 through 1966, 22 patients were under the age of 16 at the time the tumors of these glands were recognized. All patients with acute inflammatory processes involving the salivary glands were excluded. All lesions occurred in the parotid gland except for three patients in whom the submaxillary gland was involved. This distribution of the various pathologic entities in the 22 patients is shown in **Table I.**

Follow-up periods varied from 2 to 23 years, with an average of 13 years. The operative procedures, along with the results of treatment and the length of follow-up periods, are shown in **Table II.**

RESULTS

Since a total of 440 tumors of the parotid and submaxillary glands were treated at the Henry Ford Hospital from 1944 through 1966, approximately 5 per cent of all patients with tumors of the major salivary glands were 16 years of age or less. This figure agrees with that of other investigators.[1]

Of the four patients with persistent salivary gland enlargement due to chronic sialadenitis, three required resections because of persistent symptomatic enlargement. In one of the patients, ductal obstruction, due to a stone, was shown to be the etiologic factor. The additional patient, who did not require an operation, had bilateral parotid involvement. Antibiotics were used in treatment.

As shown in **Table II**, problems in treatment were concerned primarily with mixed tumors and mucoepidermoid tumors in children. Difficulty occurred as a result of inadequate initial operative procedures.

Of seven children having mixed tumors of the parotid, two were seen initially because of local recurrence following a previous local excision. One of these patients had been operated for a mixed tumor on two previous occasions. Wider excisions, usually a subtotal parotidectomy, has not been followed by further difficulty for follow-up periods of 3 to 18 years.

All four children with mucoepidermoid tumors were seen because of recurrence, for the third time in one patient, following previous excisions. In one patient, cervical lymph node dissection for metastatic spread was necessary at the time of reoperation.

DISCUSSION

The frequency of occurrence and high recurrence rate of mixed tumors and mucoepidermoid tumors, after local excision of salivary gland tumors in children was striking in this review. The potential danger of salivary gland tumors in children is emphasized.

A tumor of a major salivary gland in infancy can be expected to be a hemangioendothelioma or angiomatous lesion of congenital origin. Kauffman and Stout report benign hemangioendotheliomas to be the dominant tumors of the parotid in the first year of life.[2] They point out that this pathologic entity is the most striking feature distinguishing parotid tumors in infants and children from those occurring in adults. Surgical removal of hemangioendotheliomas, hemangiomas,

TABLE I. LESIONS OF PAROTID AND SUBMAXILLARY GLANDS IN 22 PATIENTS UNDER THE AGE OF 16 YEARS.

	LESION	NO. PATIENTS	AGES
I. Infancy and early childhood	Hemangioendothelioma	2	1-2 mo.
	Lymphangioma	1	3 yr.
II. Childhood	Chronic sialadenitis, non-specific*	4	6-16 yr.
	Tuberculous sialadenitis	1	7 yr.
	Simple cyst	1	6 yr.
	Epidermoid cyst*	1	9 yr.
	Mixed tumor*	7	8-16 yr.
	Mucoepidermoid tumor	4	11-14 yr.
	Acinar cell carcinoma	1	13 yr.
TOTAL		22	

*One each of these categories occurred in submaxillary gland.

TABLE II. OPERATIONS AND RESULTS OF TREATMENT FOR MAJOR SALIVARY GLAND LESIONS IN CHILDREN.

LESION	NO. PTS.	ORIGINAL OPERATION	RECURRENCE	FINAL OPERATION	CURRENT STATUS	LENGTH OF FOLLOW-UP (YR.)
Hemangioendothelioma	2	Part. parotidect.	No (2)	———	No rec.	3-15
Lymphangioma	1	Superficial parotidect.	No	———	No rec.	2
Chronic sialadenitis, non-specific	4	Subtot. parotidect. (2) Excision submax. gland (1) No operation (1)	No (4)	———	No rec.	6-19
Tuberculous sialadenitis	1	Subtot. parotidect.	No	———	No rec.	13
Simple cyst	1	Superficial parotidect.	No	———	No rec.	2
Epidermoid cyst	1	Excision submax. gland	No	———	No rec.	10
Mixed tumor	7	Local excision (4)	Rec. (2)*	Subtot. (2) parotidect.	No rec.	4-22
		Excision submax. gland (1)	No	———	No rec.	
		Subtot. parotidect. (2)	No	———	No rec.	
Mucoepidermoid tumor	4	Local excision (4)	Rec. (4)**	Subtot. (2) parotidect. Total (2) parotidect.	No rec. in 3, 1 lost to follow-up	2-20
Acinar cell carcinoma	1	Superficial parotidect.	No	———	No rec.	4

*In one patient, recurrence developed on 2 occasions after local excisions done prior to subtotal parotidectomy.

**In one patient, recurrence developed on 3 occasions after local excisions prior to more madical operations. Neck dissection also done in 1 patient having cervical node metastases.

and lymphangiomas is avoided if possible during the first two years of life since facial nerve damage is prone to occur and some of the lesions will regress. A small incisional biopsy is performed to eliminate the possibility of a rare sarcoma or embryoma which should be totally removed by parotidectomy.[3] Early removal of benign congenital lesions may be necessitated because of size, ulceration, or hemorrhage.

Except for the finding of undifferentiated carcinoma occurring more frequently in childhood (beyond infancy) than in adults, the spectrum of pathology and the clinical behavior of lesions of major salivary glands is the same in children as in adults.[2] Chronic sialadenitis can produce persistent tumefaction and constitutional symptoms in children as well as in adults. Blatt states that benign lymphosialadenopathy in children is characterized by a non-obstructive peripheral duct sialectasis.[4] However, chronic sialadenitis of the submaxillary gland in a 16 year old boy in our group was associated with a stone in the duct. Total extirpation of a submaxillary gland because of repeated inflammatory exacerbations associated with a calculus was also required for a seven year old patient reported by Doku.[5] As Beahrs, Devine, and Woolner point out, parotidectomy is indicated when symptoms of chronic or recurrent sialadenitis are severe and do not respond to conservative treatment.[6] Blatt also emphasized that recurrent and persistent parotid lymphadenitis can result from animal scratches.[4]

Karlan and Snyder emphasize that chronic sialadenitis causes the majority of persistent salivary gland enlargements and can usually be managed satisfactorily by observation and antibiotics.[7] Extensive parotid surgery for inflammatory lesions is associated with a greater risk of facial nerve damage in children. In general, chronic inflammatory lesions of the salivary glands were not included in this series unless the persistent enlargement produced significant symptoms or problems in differentiation from a neoplasm.

The histologic identity of discrete nodules or tumors of major salivary glands cannot be defined with certainty except by study after surgical removal. Therefore, all such gross lesions in the parotid should be treated by at least a superficial parotidectomy (removing the portion of the gland superficial to the facial nerve) and those in the submaxillary gland by total excision of this gland, as the minimal operative procedure. This study emphasizes the necessity for this policy in children as well as in adults. A high local recurrence rate, metastatic spread, or other complications occur following removal of mixed tumors, mucoepidermoid tumors, or more virulent lesions, or more malignant lesions unless this policy is followed in operative procedures for all ages beyond infancy. Every effort should be made to preserve the facial nerve and its major branches, if these are not involved as evidenced by pre-operative or operative findings. Of course, preservation of branches of the facial nerve can necessitate a more tedious and difficult dissection in young children. Tumors of the deep portion of the parotid gland are rare; these require removal of this portion of the gland by an approach through the neck.

It is true that discrete small tumors projecting from the lower pole of the parotid can occasionally be adequately removed by a wide excision of the lower half of the gland (partial parotidectomy) after proper visualization of the facial nerve and its branches. Also, in rare instances incisional biopsy is indicated to determine the nature of large diffuse lesions in infants or young children to support a policy of continued conservative treatment for a chronic inflammatory process. Sialograms are also of help in such problems. Thus, experienced surgical judgment modifies treatment, but the policy stipulated in the above paragraph should be the basic plan of management of parotid tumors in children.

Nodules located posterior to the angle of the mandible should be considered to be parotid tumors in their initial management. Although a nodule in this location can be an enlarged lymph node, it is more likely to be a tumor of the parotid gland, in our experience. Therefore, mere enucleation of such lesions under local anesthesia should be avoided. Adequate removal of parotid tumors in this posterior location requires general anesthesia and, at least, a superficial parotidectomy.

The clinical course of the various salivary gland tumors in children also appears to be similar to that for adults. Thus, long periods of follow-up are required before cure of certain lesions, such as mixed and mucoepidermoid tumors, is certain. Kauffman and Stout did not encounter a mixed tumor of a major salivary gland in a patient less than 7 years old; this conforms with our experience.[2] Mixed and mucoepidermoid tumors usually enlarge slowly.

Except for the problem of local recurrence and metastatic spread, postoperative complications in the children with major salivary gland lesions were minimal in the group of patients in this study. Two patients had transient facial weakness following superficial parotidectomy for mixed tumor, one of these patients also developing gustatory sweating (Frey Syndrome).

Of course, a variety of benign and malignant lesions, not represented in this study, can occur in the major salivary glands in both children and adults. Some of these have been noted in several reports which indicate their rare occurrence.[8-10] The parotid glands may be diffusely enlarged as a result of involvement by systemic disease such as sarcoidosis. A parotid tumor may be simulated by underlying mandibular tumors, primary or metastatic, which push the parotid anteriorly.

SUMMARY AND CONCLUSIONS

1. In an evaluation of 22 patients, who were 16 years of age or less at the time of recognition of tumors in their major salivary glands, the spectrum of the pathology of lesions, excluding acute inflammatory processes, corresponded to that for adults, except that hemangioendotheliomas and congenital angiomas predominated in infancy and early childhood.

2. Tumors of the major salivary glands require, in general, an initial wide excision by at least a superficial parotidectomy or excision of the submaxillary gland. Enucleation, or other inadequate surgical procedures, has resulted in the past in a high recurrence rate of salivary gland tumors in children. This was especially emphasized in the commonly occurring mixed and mucoepidermoid tumors. Thus, the surgical principles of management of salivary gland tumors in adults applies equally to children.

3. Chronic or recurrent sialadenitis, not responding to medical measures, occasionally requires operative treatment in children.

An Unusual Case of Middle Ear Injury

BY JACK CAMPBELL, M.D.
BATTLE CREEK

A recent comprehensive article in the Laryngoscope, June 1968, by Hough and Stewart[2] indicates the infrequent recording of conductive lesions due to middle ear injuries. This article is chiefly devoted to those cases in which middle ear injuries are found associated with severe injuries where skull fractures are encountered, et cetera. Our report is of traumatic injury to the external auditory canal with middle ear injury.

The patient was a white male, age 24, who was a repairman for the telephone company. On 11/30/67 he was admitted to the Out Patient Department of the hospital, roughly two hours after the following had taken place: at 11 a.m. he was disconnecting a telephone line at the side of a house and while reaching a twig of a tree around which he was working penetrated under his cap and into his ear canal. Immediately he sustained severe pain and severe vertigo. He fell to the ground and after the vertigo maintained itself, he managed to crawl to the company truck and use the mobile phone to call for medical aid. He had no severe bleeding at the time, complaining only that he had severe vertigo. He was unable to stand without putting his arms out from his sides to steady himself in space and, of course, he heard very poorly.

He was examined rather promptly in the Out Patient Department admitting room and was found to have a traumatic perforation of his right tympanic membrane after the twig had deflected from the anterior wall of the external auditory canal. Furthermore, with microscopy, it was noted that there was an incudo-stapedial dislocation.

Two days after his admission, because of the obvious involvement of his vestibule, secondary to his trauma, and when we were more reasonably certain that we had protected him from tetanus and infectious labyrinthitis, etc., he was taken to the operating room. Under local anesthesia a tympanomeatal flap was developed with some difficulty because of the trauma involving the external auditory canal. After reflecting this forward and controlling the bleeding with adrenalin tampons, the posterior canal wall was taken down in the usual manner and we were able to visualize the problem: he had dislocated both the incus and the stapes.[3] The incus was no longer in continuity with the stapes and the stapes was rotated 45 degrees toward the promontory and depressed into the vestibule slightly. The sacule did not appear to be injured from the trauma, however, following removal of the stapes.

It was my belief, at the time, that the incus was fractured and a stainless steel prosthesis gelfoam wire was placed from the long process to the oval window. It was difficult for us to identify the malleus handle adequately because of the traumatic condition of his tympanum and we were not as hopeful that a prosthetic device from the malleus to the oval window would work as well as one from the incus to the vestibule. The incus was so mobile, however, we were unable to use a stainless steel pre-formed gelfoam prosthesis, so an aluminum teflon piston was used, as this has a grasp application and we were able to tighten this over the neck of the incus and place it over a compressed gelfoam pad, maintaining the position of the incus in its normal position and place it over a compressed gelfoam pad covering the oval window, using a modification of a consistently effective procedure restoring the sound conduction to the oval window, as outlined by Dr. Howard House.

Following this procedure, we then anesthetized the pretragal area and the tragus was exposed and the upper half excised. The perichondrium was stripped from this. One-half of this was compressed, after thinning, and placed under the tympanic membrane, after we had first placed gelfoam soaked in Chloromycetin otic into the middle ear space. The tympanic defect seemed to be covered nicely this way and this same "slush" was then used as a retainer of the tympanomeatal flap, after it was reflected into its normal position. A mastoid dressing was applied and the procedure was terminated.

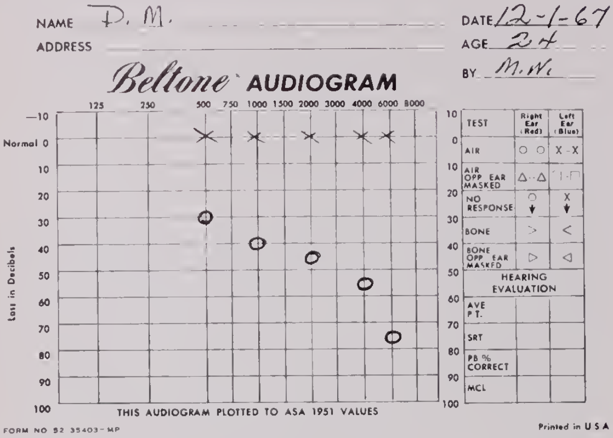

FIGURE 1

An audiogram done prior to his surgery (**Figure 1**) indicated a rather severe hearing impairment with evidence of probable injury to the sensorineural mechanism. Because of his hearing loss and because he had had previous audiometric evaluation at the University of Michigan, we obtained a copy of the work done there in June 1965. The final diagnosis of their department was chronic sinusitis and possible mild high tone sensorineural deafness. This then made us cognizant to the fact that he had perhaps had some pre-existing problem in his ear. However, after obtaining their records, we found that they were concerned with his left ear and his trauma was to his right ear. Thus, we were forced to conclude that he did not have a pre-existing sensorineural hearing loss to his injured ear.

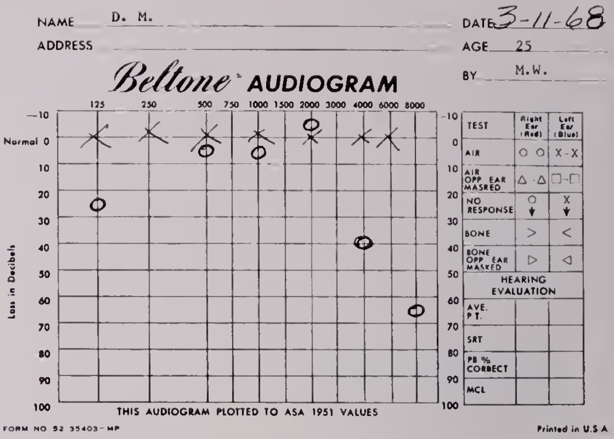

FIGURE 2

An audiogram (**Figure 2**) three months after his surgery will indicate complete recovery through the speech range of his hearing loss. Moreover, it will be noted that he had some recovery in the area most concerned about in acoustic trauma, 4000 cycles, but still showed evidence of sensorineural damage.

The important features of the management of the case, of course, were that his vertigo was almost non-existent within three days after surgery and that he had an uneventful recovery with a non-infected middle ear cavity and labyrinth following surgery. Further, he had a salubrious response to his graft and prosthesis. The patient was returned to his normal occupation in a six week interval and as far as he is aware, his hearing is normal binaurally.

Summarily, a brief resume of the handling of traumatic ossicular[4] disruption and dislocation combined with tympanic perforation with present day microsurgery is presented.

Acute Mumps Meningitis

BY CARLOS A. PHILIPPON, M.D., F.A.A.P.
ALMA

Acute mumps meningitis is a relatively common, benign and short lived complication of mumps virus infection. The condition should not be confused with mumps encephalitis which is more severe, carrying a 20% mortality and a higher incidence of neurologic sequelae (ataxia, hemiplegia, spastic triplegia, etc.).

The purpose of this report is to call attention to this entity that may go undiagnosed unless sought for.

MATERIAL

This small series consists of 8 cases of acute mumps meningitis (**Table 1**) drawn from a single Pediatric Practice and seen at Gratiot Community Hospital in Alma between the months of February and May of 1968.

There were 6 males and 2 females, in keeping with the reported preponderance of males over females at a ratio of 5:1. The age ranged from 4 to 12 years.

TABLE 1

Symptoms	No. of Cases
Headaches	8
Vomiting	8
Fever	8
Malaise	8
Stiffneck	8
Photophobia	7
Parotid Swelling	6
Dehydration	5
Convulsions	0

CLINICAL SYMPTOMS

All 8 cases had an abrupt onset of illness with fever, headaches and vomiting followed within 24 hours by mild stiffness of the neck and photophobia.

Signs of meningeal irritation were elicited in all on admission. The onset of CNS involvement followed the parotid swelling for 7 days in 3 cases, 2, 5 and 10 days in another 3. One never developed glandular swelling and in 1 case parotitis appeared on the right side 3 days after the CNS symptoms and on the left 3 days after the right.

LABORATORY FINDINGS

As can be seen in (**Table 2**) all 8 cases had spinal fluid pleocytosis ranging from 84 to 1450 with a lymphocytic preponderance in 6.

As expected Protein and Sugar were normal or slightly elevated and all cultures were negative. Case 3 is included even though the CSF was normal, because the patient had all the clinical features already described.

Table 3 depicts the results of the CBC's showing a tendency to a mild leukopenia, the lowest being Case VIII with 2800 cells. A polymorphonuclear leukocytosis on the peripheral smear is present in most cases.

Virus isolation was attempted in 3 cases by forwarding the CSF to the Bureau of Laboratories, Michigan Department of Health. All 3 cases were negative. This failure to isolate mumps virus may

CBC results

have been due to our faulty handling of the specimens. Complement fixation titers were obtained in 2 cases, both with positive result thus confirming the clinical diagnosis. The test was crucial in Case I in whom parotid swelling never developed.

HOSPITAL COURSE AND TREATMENT

Clinical symptoms subsided within a week in all cases except one who remained febrile for 8 days.

Convulsions occurred in none nor were there any signs of neurologic sequelae at the time of discharge.

None of the cases had papilledema or evidence of increased intracranial pressure.

The treatment consisted of symptomatic and supportive measures. Analgesics and antipyretics were used as needed and, only occasionally, mild sedation with a short acting barbiturate.

All cases obtained temporary relief from headaches at the time of the lumbar puncture.

Five children required intravenous fluids to correct a mild to moderate dehydration and persistent vomiting.

COMMENTS AND DISCUSSION

Acute mumps meningitis is a complication of the mumps (myxovirus) infection that follows a rather typical clinical pattern of sudden onset of illness with fever, headaches, vomiting, variable degree of stiffness of the neck and signs of meningeal irritation on physical examination.

It usually appears 7-10 days after the glandular involvement although it may precede, manifest during or without any evidence of parotitis.

The absence of cerebral symptoms points to a pure meningeal involvement.

The cerebrospinal fluid shows pleocytosis with normal or elevated Sugar and Protein. These findings alone are, of course, not diagnostic since aseptic meningitis of other etiology will present the same changes.

It is estimated that between 35 and 65% of cases of mumps will show CSF pleocytosis if tested routinely so that this finding becomes even less specific.

The presence of the typical clinical picture during an epidemic in the community coupled with glandular involvement warrants the diagnosis of acute mumps meningitis.

In those instances where one or more criteria are missing confirmation must be obtained by virus isolation or serologically with complement fixation titers.

A leukocytosis with neutrophilia in the peripheral smear is described as present during the initial, acute stage of the disease. Our cases had a tendency to a mild leukopenia that was pronounced in one instance. There was relative neutrophilia in most. The true incidence of this complication is difficult to ascertain because of the varying reports including those from the Communicable Diseases Center of the U.S. Public Health Service. When the cases are reported from the local level they are included under the heading of "Encephalitis of a post-infectious nature" and I imagine that by so reporting we have added 8 more cases of "Encephalitis" to the National Registry.

Mumps meningitis is, nevertheless a common condition. Among 511 cases of acute CNS diseases of viral etiology reviewed by Lennette and coworkers they found 42 cases or 8% to be due to mumps. At the local level, according to the Monthly Surveillance Report by the Michigan Department of Public Health (*Michigan Medicine* —906—July 1968) there were 11,808 cases of mumps in the first 5 months of 1968 as against 10,512 for the same period in 1967.

Forty-seven cases of Encephalitis are listed but without giving the etiology.

SUMMARY

Thus, to conclude: a youngster who, during an epidemic of mumps has been exposed to, or has mumps parotitis and develops a sudden illness characterized by fever, headaches, vomiting and stiffness of the neck very likely suffers from mumps meningitis and deserves a lumbar puncture. This latter procedure will accomplish threefold:

1. will rule out a purulent or bacterial meningitis
2. will confirm the clinical diagnosis and
3. will temporarily relieve the patient's cephalalgia.

APPENDIX

REPRESENTATIVE CASES

CASE I is an 8-yr.-old Caucasian male who was in his usual state of health until 24 hours prior to admission when he suddenly developed fever. Within the next 12 hours he complained of severe headaches and vomited once.

When examined on the day of admission he was alert with no cloudiness of his cerebral faculties. The temperature was 102 rectally. There was stiffness of the neck but without rigidity. Brudzinski, Kernig and "tripod" signs were present. The optic fundi were normal. A lumbar puncture disclosed clear CSF with 220 white cells of which 213 were neutrophils and 7 lymphocytes.

A second spinal fluid 2 days later again showed pleocytosis of 526 with 285 polys and 141 lymphs. Protein and Sugar were normal. The youngster remained febrile, complained of severe headaches and photophobia but mentation was normal at all times.

A complement fixation titer for mumps virus in serum showed an acute phase sample of 1:8 and a fourfold rise to 1:32 in 3 weeks. The patient recovered uneventfully and without sequelae.

COMMENT: this interesting case began with a picture of aseptic meningitis of viral etiology, the ultimate diagnosis unfolding only when the serology revealed the presence of rising titers for mumps.

CASE VII: This 4-yr.-old Mexican-American male youngster was well until the night prior to admission when he suddenly developed fever, headaches and vomiting. By the next day he continued ill having now complained of photophobia.

He was known to have been exposed to mumps in the previous 2 weeks by two siblings.

Initial examination revealed fever of 102.2, lethargy but with normal mental faculties. Signs of meningeal irritation were elicited: Brudzinski, Kernig and nuccal stiffness.

The parotid regions were normal with no evidence of swelling or tenderness.

By lumbar puncture clear CSF was withdrawn containing 397 cells of which 234 were neutrophils and 163 lymphocytes.

Sugar 73 mg. % and Protein 29 mg. %. The hemoglobin was normal and the WBC showed 10,700 cells with 80% neutrophils and 19% lymphocytes, 1% monocytes.

Three days after admission and with the above clinical picture only slightly improved he developed parotid swelling and tenderness on the right, followed, three days later, by left sided parotitis.

Acute phase complement fixation titer of 1:8 with a convalescent titer of 1:128 were obtained.

He recovered without sequelae after 8 days of low grade fever, malaise and intermittent headaches.

COMMENT: This youngster developed the complication before the appearance of the glandular involvement thus indicating the wide spread distribution of the virus before localizing the disease to the parotid glands.

Xanthogranulomatous Pyelonephritis

ABSTRACT: A case of xanthogranulomatous pyelonephritis in a fifty-five year old female is presented to document the rapid progression of this disease during a forty-five month period. This destructive inflammatory process is usually unilateral and associated with a Proteus infection. At times the gross and radiologic picture may resemble a renal tumor; furthermore, the microscopic appearance of the large vacuolated foam cells has been confused with the clear cells of hypernephroma. Treatment usually consists of nephrectomy of the affected side.

BY MARK C. MC QUIGGAN, M.D., F.A.C.S.
HENRY Y. LIU, M.D., F.A.S.C.P.
BOTH OF SOUTHFIELD

Xanthogranulomatous pyelonephritis is a destructive disease of the kidney which may mimic renal carcinoma in its pyelographic as well as its gross and microscopic appearance.[1, 2, 3] While the end result of this disease is usually a functionless kidney the rate of progression of the disease has not been determined. This case is being presented to document the possible rapid progression of this disease. Minimal caliectasis in the upper pole of the kidney was demonstrated on a pyelogram taken forty-five months prior to admission. These minimal inflammatory changes progressed rapidly to total destruction of the kidney.

CASE REPORT

P.T. (No. 090047) is a 55-year-old Negro female who was admitted to Providence Hospital on December 20, 1967 with a history of a urinary tract infection which did not respond to antibiotic therapy. An intravenous pyelogram on December 11, 1967 demonstrated non-visualization of the left kidney and minimal caliectasis in the right upper pole.

In 1964 this patient underwent urologic investigation for a similar problem. An intravenous pyelogram obtained on March 16, 1964 demonstrated minimal caliectasis on the left (**Figure 1**). At cystoscopy, findings compatible with chronic cystitis were noted. At this time the patient responded well to antibiotics and remained asymptomatic until about six months prior to admission when she began to experience bladder irritative symptoms. She did not seek medical advice until one month prior to admission.

A blood pressure of 140/90 was noted. The rest of the physical examination was within normal limits.

The hemogram was normal, the blood urea nitrogen was 22 mg. per 100 ml. and the fasting blood sugar was 105 mg. per 100 ml. on admission. Marked pyuria and bacteruria without albuminuria

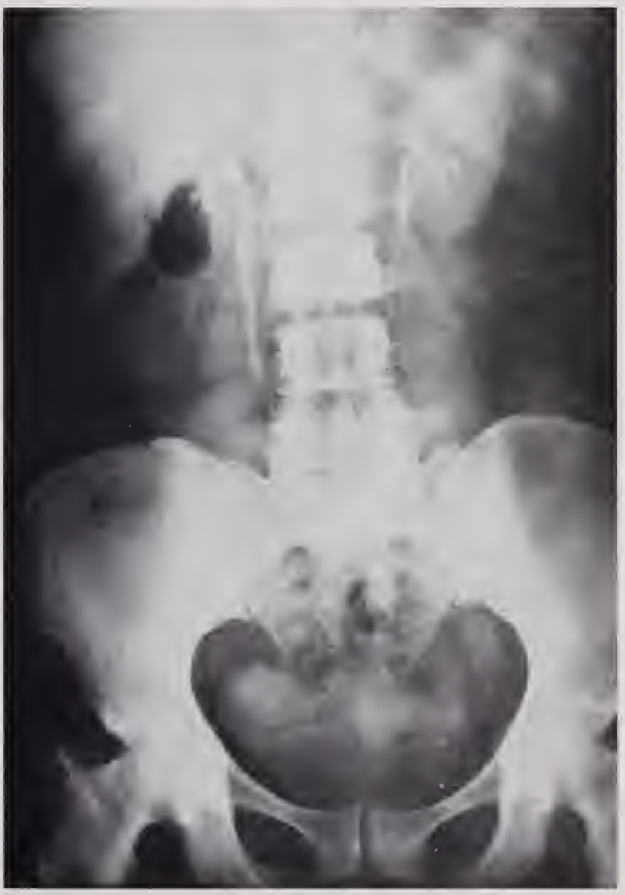

Figure 1. Minimal caliectasis is noted in the upper pole of the left kidney on the intravenous pyelogram taken forty-five months prior to admission.

The authors are both associated with Providence Hospital, 16001 W. Nine Mile, Southfield, Michigan; Doctor McQuiggan with the Department of Urology, and Doctor Liu with the Department of Pathology.

were noted on the urinalysis. Urine culture from the bladder and left kidney grew out Proteus. The 24 hour urine for acid fast bacteria and the tuberculin skin test were negative. Urine cytology was negative. Postoperative cholesterol was 209 mg. per 100 ml. and total serum lipid was 2638 mg. per 100 ml.

Since this patient presented with persistent urinary tract infection and non-visualization of the left kidney, retrograde studies were planned. At cystoscopy on December 21, 1967 some inflammatory changes on the floor of the bladder were seen. When the ureteral catheter was passed on the left side a thick purulent drainage was obtained. The retrograde pyelogram (**Figure 2**) demonstrated far advanced destructive inflammatory changes of the entire kidney with ragged edges and dilatation of the entire renal pelvis and ureter. The density of the third lumbar vertebrae was increased suggesting metastatic disease or Paget's disease of bone.

Since metastatic neoplasm was suspected as a cause of the vertebral lesion, a thorough search for a primary was undertaken. Upper gastrointestinal examination, barium enema, examination of the breasts and pelvic examination failed to demonstrate any neoplasms. The alkaline phosphatase was not elevated. Since none of these studies suggested neoplasm the diagnosis of Paget's disease of bone was made.

Because the left kidney was almost completely destroyed, funtionless, and involved with a severe purulent inflammatory process, a left nephrectomy was advised. On December 27, 1967 the left kidney was approached through the twelfth rib bed and left nephrectomy was performed. Postoperative course was uneventful. The urine culture was negative one week postoperatively. The patient was discharged on an ascorbic acid preparation and nitrofurantoin 100 mg. four times a day.

The kidney weighed 180 mg. Its capsule was thickened, edematous and firmly adherent to the renal cortex. On the cut surface (**Figure 3**) the renal calyces and pelvis showed marked dilatation and tissue destruction. The inner surface appeared ragged and hemorrhagic. In the adjacent renal tissue, numerous small bright yellow nodules and fibrotic areas were present. Microscopically, the wall of renal calyces and pelvis, and part of renal medulla were replaced by a thick band of granulation tissue which was characterized by numerous congested capillaries and rich cellular infiltrate of an inflammatory nature. Toward the calyceal surface, hemorrhage and tissue necrosis were marked. In the cellular infiltrate, plasma cells predominated. However, the most striking feature was the presence of the large mononuclear xanthomatous cells, with a vacuolated and finely reticular

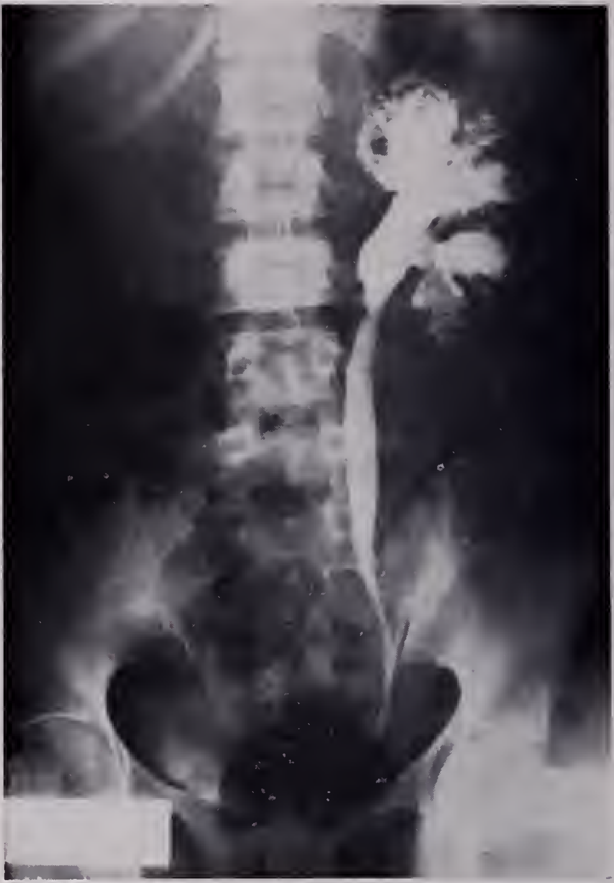

Figure 2. The preoperative left retrograde pyelogram demonstrates marked destruction of the entire kidney with dilatation of the entire ureter.

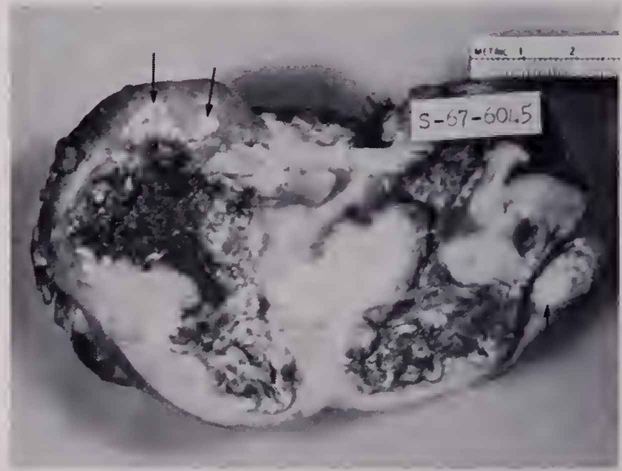

Figure 3. Cut surface of the bisected kidney showing marked destruction of renal tissue along the dilated calyces. Arrows indicate prominent yellow nodules of xanthomatous tissue.

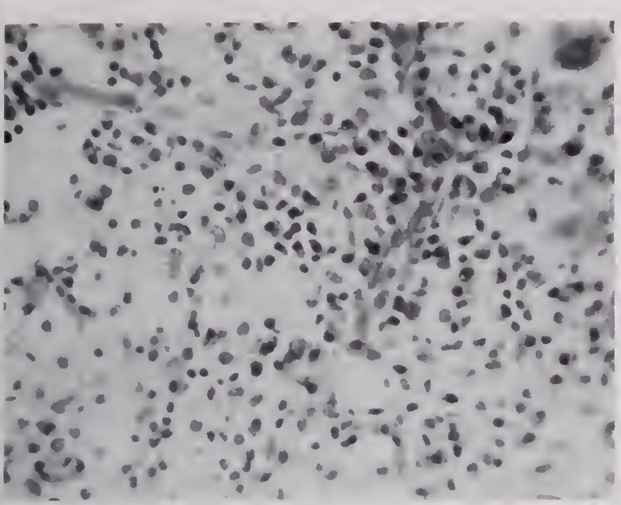

Figure 4. High magnification of an inflamed area. Note the intimate mixture of xanthomatous cells and other inflammatory elements. A multinucleated giant cell is in upper right (H and E stain, 450 X).

cytoplasm (**Figure 4**). Their nuclei were relatively small but often showed a prominent nucleolus. These xanthomatous cells were seen throughout the granulation tissue. Large aggregates of them corresponded to the yellow nodules seen grossly. Multinucleated giant cells with similar nuclear structures but with denser and more eosinophilic cytoplasm were frequently seen side by side with the xanthomatous cells. The renal cortical tissue displayed marked periglomerular and interstitial fibrosis with loss of parenchymal elements, leukocytic infiltration and exudates in the tubular lumen. The pathological diagnosis was xanthogranulomatous pyelonephritis.

Follow up lipid studies were obtained on June 17, 1968. They were as follows: Total cholesterol 289 mg. per 100 ml., total lipid 1000 mg. per 100 ml., triglycerides 67 mg. per 100 ml., Phospholipid 8.5 mg. per 100 ml. The lipoprotein electrophoretic pattern was normal with a 35 percent alpha fraction and a 65 percent beta fraction.

DISCUSSION

INCIDENCE

Xanthogranulomatous pyelonephritis is an unusual disease which is rarely bilateral.[12] The youngest reported case was in a nine year old girl[5] and the oldest reported case was in an eighty-two year old man.[6] The disease occurs most commonly in the fifth decade. The sex distribution varies with the series reported.[5, 6]

ETIOLOGY

At the present time it is not clear whether this xanthomatous process represents a localized response to infection or a generalized lipid disorder. Saeed and Fine in a report of four cases[7] incriminate a metabolic defect of lipid metabolism because of the absence of lipid macrophages in other types of pyelonephritis and the variable bacterial flora seen in xanthogranulomatous pyelonephritis. However, this was a speculative assumption since the serum lipid fractions were not studied. In our case a complete lipid profile was obtained (see case report). The total serum lipid and the total cholesterol were slightly elevated, but the phospholipid, the triglycerides and the lipoprotein electrophoretic pattern were within normal limits. This suggests that this disease is not a generalized lipid disorder but rather represents a peculiar localized reaction to infection in which phagocytosis of a fatty substance takes place. Diabetes mellitus is not associated with xanthogranulomatous pyelonephritis as it is with some of the other xanthomatous diseases.

All cases of this disease have severe bacterial infections of the kidney and the majority of these infections involve a Proteus organism. Renal calculi often accompany infections caused by urea splitting organisms such as Proteus, so their presence in xanthogranulomatous pyelonephritis is not surprising. Many of the cases reported are associated with obstructive uropathy. While this may initiate the infection it would not be a specific cause of this disease.

CLINICAL COURSE

Typically the patient with xanthogranulomatous pyelonephritis presents with a history of recurrent urinary tract infection, Proteus being the most common organism involved. Often the urine cannot be cleared with antibiotic therapy. Symptoms include those of bladder irritation and hematuria as well as generalized sepsis with chills and fever. Flank pain is common. Occasionally this disease presents as an abdominal mass.[8] The disease process is destructive and usually the involved kidney is completely functionless. Fortunately the disease is almost always unilateral and therefore nephrectomy provides a complete cure. The natural course of the disease has not been previously documented and this case is unique in this respect. Minimal pyelonephritic changes progressed to complete destruction of the kidney within a four year period.

DIAGNOSIS

This disease is unique in that it may mimic renal neoplasm radiographically, grossly and even microscopically. The affected side is usually not visualized by intravenous pyelography because of the lack of function. The retrograde pyelogram may demonstrate a space occupying lesion as seen in a hypernephroma. Or it may present as a diffuse inflammatory process involving the entire kidney with or without hydronephrosis and hydroureter, as is seen in renal tuberculosis or some types of far advanced obstructive uropathy. Angiography, if done, usually demonstrates a decreased vascular pattern which may be of some help in the differential diagnosis.

At operation the diagnosis is not always obvious. At times the diseased kidney is adherent to adjacent structures as seen in neoplasm and unnecessarily radical operations have been performed. In one case, what was thought to be an inoperable hypernephroma was biopsied and the microscopic diagnosis of clear cell hypernephroma was made. Radiation therapy was given. When the patient was alive nine years after the initial diagnosis the slides were reviewed and the error was discovered.[8] The lesion which was thought to be hypernephroma was indeed xanthogranulomatous pyelonephritis.

PATHOLOGY

The definitive diagnosis of xanthogranulomatous pyelonephritis can be made only by histologic examination of the diseased kidney. Grossly the xanthomatous area is bright yellow and if localized may appear neoplastic. However, if diffuse it resembles a severe pyelonephritis with or without pyonephrosis and small renal abscesses. Microscopically an intimate admixture of large, vacuolated, mononuclear xanthomatous cells and abundant inflammatory infiltrate is seen in xanthogranulomatous pyelonephritis. In renal cell carcinoma of the clear cell type the individual cells may resemble the xanthomatous cells, but the neoplastic cells are arranged in an organoid pattern with less inflammatory infiltrate. The PAS positive material is usually negative after diastase treatment in renal cell carcinoma but remains positive in xanthogranulomatous pyelonephritis. Fat stains demonstrate abundant lipids in xanthoma cells. Confusion in diagnosis is usually encountered when only a limited portion of the kidney is available.

TREATMENT

Since the disease process is usually so far advanced when the diagnosis is made, antibiotic therapy has little value in the primary treatment of xanthogranulomatous pyelonephritis. Fortunately the disease is usually unilateral and nephrectomy provides a complete cure. In the few cases in which pyelonephritis has been noted in the contralateral kidney an attempt should be made to sterilize the urine and keep the kidney free of calculi.[6] In our case minimal caliectasis was noted in the remaining kidney and the patient was placed on nitrofurantoin indefinitely. Ascorbic acid was added to the regimen to acidify the urine and thereby potentiate its effect.[4] The urine has remained sterile to date.

SUMMARY

A case of xanthogranulomatous pyelonephritis in a fifty-five year old female is presented. The case is unique because the progression of the disease from minimal caliectasis to complete renal destruction during a four year period is documented. An essentially normal serum lipid profile suggests that this disease represents an unusual reaction to infection rather than a generalized disease.

MAP . . . A Decade of Accomplishment

What is?

What if?

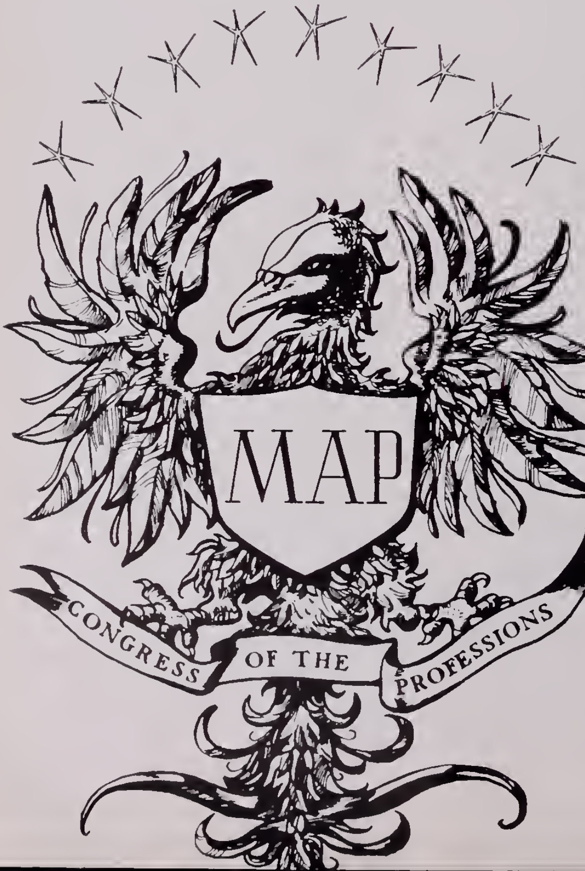
Together those two thoughts form a synthesis for action.

As questions they demand answers. As musings they spark imaginative hopes. As challenges they issue a clarion call to accomplishment. They resulted in the organization of MAP ten years ago.

In 1957 the medical profession said, by way of a survey conducted by the MSMS, that it believed coordinated activity of the professions was overdue.

THE SURVEY SPELLED out the major needs — the "what is" — and the favored procedures for meeting those needs in an organization devoted to the protection and promotion of professionalism — the "what ifs."

Hugh W. Brenneman, then Public Relations Counsel of MSMS and adviser to a number of other state professional associations, was authorized to proceed with the organization of an association of the professions and money was advanced to hire staff assistance and pay for initial meetings and mailings.



Coincidental with this action by the medical society, other professional societies were alerted to the potential of united action by the leading professions in areas of education, legislation, professional and public relations, and business services.

Almost simultaneously the boards of directors of the state professional societies passed resolutions calling for the establishment of a permanent organization with individual memberships as well as state association representation which could become financially viable and independent of any single group.

Their thinking was summed up in the expression of George W. Slagle, M.D., the then President of the MSMS.

"The power of the professions, as organizations, to serve the public good is not being used effectively because it is not being exerted in unison," Dr. Slagle said. It is ironic that at a time in our history when the nation is crying for brain-power, the most learned group of all, the professions, are being by-passed when decisions affecting their future are being made."

His successor, G. B. Saltonstall, M.D., supplemented his thought with: "Industry and labor are represented at the bargaining tables of the nation by single, powerful voices, backed by separate organizations which represent segments of interest. Legislators consult — and listen to — the wishes and demands of these highly organized groups (industry - labor). Their opinions are sought on almost all matters of legislation. By contrast, the professions are rarely considered, much less consulted, except in those instances when the matter directly affects technical subjects within the purview of one particular profession."

PEOPLE AND GROUPS at interest, but outside of the professional policy-making boards, were also consulted. Lester P. Dodd, J.D., Detroit attorney, a Past President of the State Bar and Legal Counsel of the MSMS, drafted bylaws. Dr. Marvin Niehuss, Vice President and Dean of Faculty of the University of Michigan lent support and advice. Congressman Gerald R. Ford, Jr., encouraged the development, various association executives and businessmen indicated interest and Pat Loomis as the sole staff assistant worked overtime.

Leaders of the five Charter professions met and agreed to form an association so that all professions might work together for their mutual benefit. Delegates appointed by the Board of Directors of the individual state professional societies worked out the organizational details, by-laws, administrative lines, membership qualifications, etc. The state professional societies represented at these meetings included the Michigan Society of Architects, the Michigan Society of Professional Engineers, the Michigan State Dental Association, the Michigan State Medical Society and the State Bar of Michigan.

The final organizational meeting, following approval in principle of a projected set of by-laws by the state professional societies, was held on November 23, 1958, in the new board room of the Michigan Road Builders Association in Lansing.

Bylaws were adopted, a board of directors and officers were elected and authorization given for incorporation papers to be filed.

The Founding Board members were as follows:

William M. LeFevre, M.D., President
Floyd D. Ostrander, D.D.S., Vice President
Elmer J. Manson, A.I.A., Secretary
Frederick Von Voigtlander, P.E., Treasurer
Hugh W. Brenneman, Executive Director
John G. Nolen, D.D.S.
G. B. Saltonstall, M.D.
N. O. Saulter, P.E.

THE MICHIGAN ASSOCIATION of the Professions was officially incorporated on December, 1, 1958.

Growth was inevitable. Individual membership climbed quickly — first one, then two, then three thousand; the number stabilized at 3,000. State organization membership applications were received and after studied deliberations, new professions were added — certified public accountancy, veterinary medicine, pharmacy and education. Approximately 100,000 professional people are members of MAP state organizations. Still other professions are being considered.

Other states heard the story, first New York, then North Carolina, Illinois, Virginia, Wisconsin, Pennsylvania followed the MAP pattern. Other states, Iowa, Nevada, Hawaii, Indiana, Florida, Texas, Louisiana, etc. are thinking, talking, evaluating, meeting — in order that they, too, can follow suit.

MAP is governed by a Board of Directors. On that Board recognition rather than control is accorded those professions having larger numbers of individual members. MAP by-laws provide that the Board of Directors of each State Organization Member designate two of its members, who are also members of MAP, to serve as Directors on the MAP Board. In addition to those thus provided, an equal number of Directors are elected at the MAP Annual Meeting from its individual membership. Of these not more than three, nor fewer than one, can be members of any one of the professions.

The purpose of MAP is "to devise ways and means of better utilizing the professional heritage of knowledge and skill for the benefit of society, and to create relations between the professions

Officials of MSMS who met with leaders of other professions to discuss organization plans for MAP were, left to right, G. B. Saltonstall, M.D., Charlevoix; George W. Slagle, M.D., Battle Creek; and William M. LeFevre, M.D., Muskegon.

MAP — A DECADE OF ACCOMPLISHMENT . . . CONTINUED

looking toward that end." MAP was created to provide the organizational machinery whereby the combined strength and counsel of all professions could be utilized for the advancement of professional ideals and the promotion of professional welfare. It is directed toward strengthening the traditional rights and privileges of each profession and, at the same time assisting the professions to better serve the people.

MAP-TYPE ORGANIZATIONS are designed to protect and promote professionalism. They do this via action *against* legislation which would permit third party control from whatever source — labor, business, government, farming or industry — over the professions. They *support* legislation which serves to encourage private practice and maintain the professional attributes of professional persons in employed practice. The *Legislative Report,* containing information on all bills of interest to the MAP professions is distributed weekly to all members wishing it. An annual trip to Washington keeps MAP in close contact with Michigan Congressmen.

Leader

Brink

Brenneman

LEADER — Luther R. Leader, M.D., Royal Oak, has served as a member of the MAP Board for four terms and has received the MAP Booster Award in 1963. Doctor Leader, a past president of MSMS, is now secretary of the State Board of Registration in Medicine.

BRINK — J. Russell Brink, M.D., Grand Rapids, is a member of the MAP Board of Directors, second term, and has been active in organizing the American Association of the Professions.

BRENNEMAN — Hugh W. Brenneman, executive director of MSMS and MAP, spearheaded the organization of the professional group and has served since its founding as its executive.

MAP Education Committees stimulate student interest in professional careers as well as advise secondary schools on curricula development.

Use is made of all communication media to tell the public why professional people do what they do in the way that they do it and why that way is in the public interest. Over a period of nine consecutive years, MAP has produced more than 500 quarter and half-hour telecasts over major commercial TV stations on prime time.

MAP activities in communication develop understandings and knowledge about the professions among the several professions by way of interprofessional meetings (the annual one is called the Congress of the Professions) and by MONITOR, The Journal of the Professions.

Business services designed to aid individual professional people to obtain savings through group purchasing, such as Group Term Accidental Death, Life, and High Level Life Insurance, Professional Liability Insurance can be maintained when several professions are together which many individual professions or professional persons could not otherwise obtain. The MAP Pension Plan and Trust, the first plan in the nation to qualify under the Keogh Act, has since been updated and stands today as a model plan in the nation.

MAP and its emerging national body, the American Association of the Professions, represent the professional segment of society to balance representation of other segments of society represented by such organizations as NAM for industry, US Chamber of Commerce for business, AFL-CIO for labor, Farm Bureau for farming.

Is it not necessary that one organization be able to present basic thinking of the professional segment of society as these organizations do for their segments? Otherwise how are the wishes of the professions as minority groups going to be put forward?

THE AMERICAN ASSOCIATION of the Professions has been formed with the following purposes:

1. The encouragement of participation, throughout the United States, of all the professions in programs having for their objectives the advancement of professional ideals and professional welfare.

2. The promotion of better understanding between and among the several professions.

3. The promotion of a free and cordial interchange of opinion and information among its

MAP'S FOUNDING BOARD — These men comprised the first Board. Seated left to right are F. Von Voigtlander, P.E., Ann Arbor; William M. LeFevre, M.D., Muskegon; F. D. Ostrander, D.D.S., Ann Arbor; Elmer J. Manson, A.I.A., Lansing. Standing left to right are N. O. Saulter, P.E., Detroit; G. B. Saltonstall, M.D., Charlevoix; John G. Nolen, D.D.S., Lansing, Hugh W. Brenneman, Executive Director.

members on subjects of mutual or common professional interest.

4. The promotion, upon a national basis, of closer contact between and among the leaders of the learned professions.

5. The fostering, throughout the several states, of ever higher standards of professional ethics and conduct.

6. The promotion of programs and measures designed to protect the public and the professions against encroachments on professional practice by those not qualified.

7. The promotion of programs designed to offer professional and pre-professional students more adequate preparation for professional life.

8. The promotion of programs and measures designed to assist young professionals in meeting the problems of their respective professions.

9. The stimulation and fostering of leadership by the professions in public service activities on community, state and national levels.

FEW PROFESSIONAL PEOPLE can obtain more from any organization, other than their own primary professional society, than they can from MAP. Michigan is proud to be the front runner in this vital movement.

MAP has placed the professions "in the mainstream" of community and state-wide planning by working officially with civic groups in such activities as Michigan Week, Community Health Week and its own Professional Week which has been proclaimed for eight successive years by Michigan's governors.

If an organization is known by the "company it keeps" MAP must certainly rank at the top. Among those receiving its highest Awards were such leaders as famous architect Minoru Yamasaki (1963), Chief Justice John R. Dethmers (1964), State Building Director Adrian N. Langius (1965), Explorer Talbert Abrams (1966), Sculptor Marshall Fredericks (1967), and Dental Leader Dr. John G. Nolen (1968) — all of whom received the MAP Distinguished Award for Professional Excellence.

Outstanding Service Awardees, named for their contributions to the professions, were: Lester P. Dodd (1963), Hugh W. Brenneman (1964), Gerald R. Ford, Jr. (1965), Emory W. Morris (1966), Harlan Hatcher (1967), Harold F. Gross (1968).

BEGINNING DECEMBER 1, 1968, MAP will celebrate its 10th Anniversary. Many major activities are being planned, highlighted by a trip to Spain on February 8th and the final formal structuring of the American Association of the Professions.

MAP enters its second decade with a proud record of accomplishment, successfully organized and financed. At one of the early meetings, following the successful organization of MAP, Hugh Brenneman was officially declared to be Founder of the association and a motion of thanks to him was passed. Noting a moist eye, President LeFevre said to him: "This means a lot to you doesn't it?" The reply: "Yes. And I hope it means a lot to the professional people of Michigan."

Most "head colds" last 7 to 14 days
18
WEDNESDAY
TUESDAY

In the meantime...Ornade®

Prompt relief from nasal congestion and hypersecretion due to colds.

Before prescribing, see complete prescribing information in SK&F literature or *PDR*.
Contraindications: Glaucoma, prostatic hypertrophy, stenosing peptic ulcer, pyloroduodenal or bladder neck obstruction.
Precautions: Use cautiously in the presence of hypertension, hyperthyroidism, coronary artery disease; warn vehicle or machine operators of possible drowsiness.
Usage in Pregnancy: Use in pregnancy, nursing mothers and women who might bear children only when potential benefits have been weighed against possible hazards.
Note: The iodine in isopropamide iodide may alter PBI test results and will suppress I^{131} uptake; discontinue 'Ornade' one week before these tests.
Adverse Reactions: Drowsiness, excessive dryness of nose, throat or mouth; nervousness; insomnia. Other known possible adverse reactions of the individual ingredients: nausea, vomiting, diarrhea, rash, dizziness, fatigue, tightness of chest, abdominal pain, irritability, tachycardia, headache, incoordination, tremor, difficulty in urination. Thrombocytopenia, leukopenia and convulsions have been reported.
Supplied: Bottles of 50 capsules.

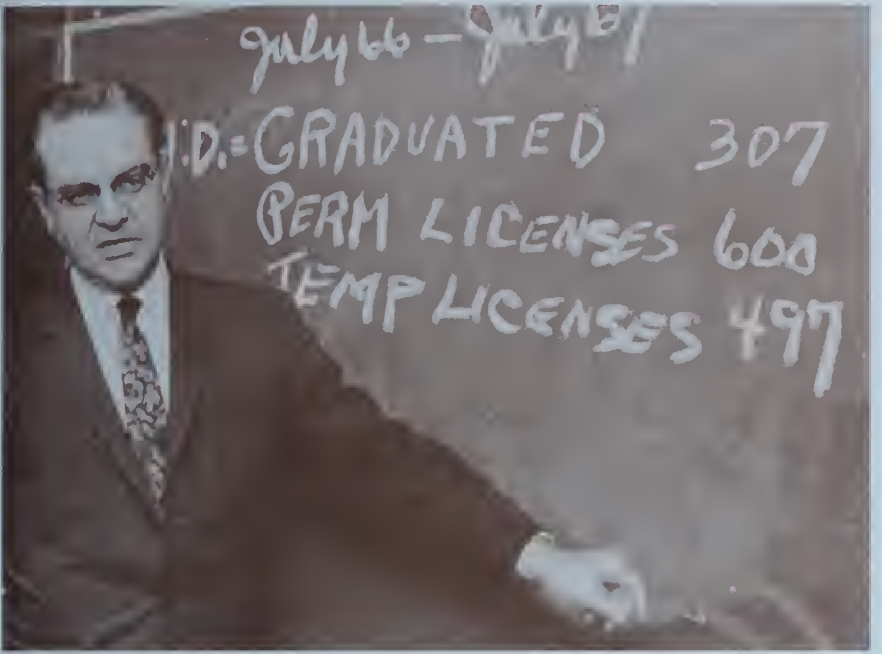
One capsule q12h for round-the-clock relief

Ornade® Trademark Each capsule contains 8 mg. of Teldrin® (brand of chlorpheniramine maleate); 50 mg. of phenylpropanolamine hydrochloride; 2.5 mg. of isopropamide, as the iodide.

Spansule® capsules brand of sustained release capsules

SK&F Smith Kline & French Laboratories

MSMS Manpower Plea Picks Up Speed



MSMS Council Chairman Ross V. Taylor, M.D., at a news conference in Jackson stressed that Michigan graduates about 300 doctors each year and licenses 1,000-1,100 physicians each year as a debtor state. (Jackson Citizen-Patriot Photo)

Co-Chairmen Robert J. Mason, M.D., left, MSMS President-Elect, and Warren Huff, outstanding Michigan educator and civic leader, spoke at the MSMS Medical Manpower Conference at Saginaw November 21 to 75 physicians and decision-makers from central Michigan and Thumb area.

All across Michigan the MSMS appeal that more physicians must be trained in Michigan is getting enthusiastic support from businessmen, civic leaders, industrialists, labor officials, educators, professional men, and the mass media.

The challenge that MSMS step up its efforts to stress the need for more medical schools was adopted by the 1968 MSMS House of Delegates. The organizational meeting for the Michigan Citizens Committee on Medical Education was organized in Detroit October 16, followed by a Michigan Conference on Medical Manpower at Battle Creek October 23. The MSMS Council outlined both immediate and long-range recommendations November 6 in a letter to the State Board of Education.

The first MSMS-sponsored regional conference, in connection with county society leadership workshops, was held in Grand Rapids November 14, and the next in Saginaw, November 28. The third is scheduled for the Metropolitan area December 12.

TV and radio stations have told the stories and articles have appeared in newspapers in Detroit, Lansing and across the state.

The MSMS appeal for more physicians was presented at Grand Rapids November 14 to, 100 physicians and community leaders from western Michigan by MSMS Secretary Kenneth H. Johnson, M.D.

Members of a special MSMS committee appointed to recommend courses of action for county medical societies to follow regarding health planning councils met recently with two invited guests. In photo at right, Mrs. Betty Tableman, executive director, Comprehensive State Health Planning Commission, visits informally with, left to right, MSMS Councilor Sidney Adler, M.D., Detroit; George T. Kelleher, M.D., Battle Creek; and MSMS Councilor John R. Pedden, M.D., Grand Rapids. In photo at left, Edwin S. Marsh, third from left, director, Health Planning Council of Michigan, talks during the dinner break with, left to right, MSMS Councilor A. C. Stander, M.D., Saginaw; MSMS Councilor Ralph R. Cooper, M.D., Detroit, and D. Bonta Hiscoe, M.D., Lansing. Otto K. Engelke, M.D., Ann Arbor, another member of the committee, was unable to attend.

Committee at Work to Develop Recommendations To County Societies re Planning Councils

At the September, 1968 meeting of The Council an ad hoc committee was authorized "To study recommended courses of action for component medical societies re health planning councils."

The special committee was a result of an action of the 1968 House of Delegates in adopting Resolution 3 "That the county societies be made cognizant of the role which can be played by them in taking leadership in the regional councils of the State Comprehensive Health Planning Commission."

Members at this first meeting received an in-depth review of the statutory requirements of this program from Mrs. Betty Tableman, Executive Director of the Comprehensive State Health Planning Commission. Mr. Edwin S. Marsh, Director of the Health Planning Council of Michigan, reviewed the voluntary role that can be made in comprehensive health planning on a regional basis.

A report of the initial committee meeting will be received by The MSMS Council at its meeting December 18.

WSU Thyroid Program Lists Top Speaker

Sidney Ingbar, M.D., Boston, and Joseph Matovinovic, M.D., Ann Arbor, will be among the principal speakers at the Eighth Annual Wayne State University Thyroid Workshop, December 11. The program will be held at the Wayne County Medical Society auditorium.

Doctor Ingbar will discuss pharmacology of iodine and Doctor Matovinovic will trace the history of goiter.

Interested physicians may obtain copies of the complete workshop program from WSU medical school or Joel I. Hamburger, M.D., 20905 Greenfield, Southfield 48075.

SECOND MARGOLIS FILM OUT NOW ON SEX, TEENAGER

The premiere showing of "Sexuality and the Teenager," a new film produced by Doctor and Mrs. Frederick Margolis of Kalamazoo, was held recently at Western Michigan University.

Included in the program was a panel discussion featuring Tommy N. Evans, M.D., Chairman and Professor of the Department of Obstetrics and Gynecology, WSU; Stuart Finch, M.D., Professor of Psychiatry and Head of the Children's Psychiatric Hospital, U-M; Pauline Iyenaga, M.P.H., Family Life Education Consultant with the Bureau of Maternal and Child Health, MDPH; and Doctor Margolis.

This film is a sequel to the Doctor Margolis' popular film "Parent to Child About Sex."

MAP Invites MSMS Members Join Special AAP Tour to Spain

The Inauguratory Session of the American Association of the Professions will convene in Detroit on February 22, 1969, recess, and reconvene in Malaga, Spain, on February 23, 1969.

As the opening major event of its 10th Anniversary Year, MAP, in cooperation with seven other State Associations of the Professions, will formally launch the American Association of the Professions and concomitantly sponsor a trip to Spain.

This trip, in behalf of the originators of the national body, members of MAP and of its components — also includes the Michigan State Medical Society.

All members of MSMS are invited to make the trip and take their families with them, each at the attractive rate of $359. This includes eight days room and board at the Hotel Pepe, taxes and tips, the plane trip (DC-8-61F) to and from Spain, the meeting, reception and dinner which precedes enplaning. The flight from Spain will return March 2.

The AAP has been organized for several years but has never been structured and implemented, awaiting the development of several State Associations of the Professions — which has now been completed. The proposals up for adoption at the February 22 meeting will be those put forth at the preliminary national get-together at Harbor Springs in the summer of 1967.

MAP spokesmen point out that: "Hotel Don Pepe and Malaga are on the sunshine coast of Spain where, even during the coldest months, temperatures rarely dip below 60 degrees and more often than not, it is sunny and warm.

"By contrasting picturesque whitewashed villages, with some of the world's finest hotels, nightclubs and luxury apartments, this birthplace of Pablo Picasso harmonizes new resort living with ancient customs and traditions.

"On any winter's day, it is possible to ski on fresh snow in the Sierras during the morning, play a round of golf or a set of tennis by the sea, have a siesta on the beach in the afternoon, and pass an enjoyable evening in one of those typical Spanish bodegas.

"The non-athletes, who can forego lazying on the beach or swimming in the pools (the hotel has three of 'em) can take inexpensive side trips to Granada ($12), Tangier-North Africa ($35—by air), Gibraltar, etc."

MSMS members wanting more information may write or phone:

Doctor Loupee Dies; Served In Legislature

Sherman L. Loupee, M.D., 96 years old, who served in the State Legislature from 1939 to 1949 and who was selected by MSMS as "Physician-of-the-Year" in 1952, died October 31 in Dowagiac where he had practiced many years.

Doctor Loupee, who underwent surgery last year, was last honored by MSMS at its special Government Day during the MSMS Centennial observance in Detroit in 1965.

A former delegate for many years to both the state and national Republican conventions, Doctor Loupee had a long list of civic accomplishments. He was mayor of Dowagiac in the 1950's and for a time was a member of the Dowagiac Board of Education. He was long active in the Dowagiac Chamber of Commerce and Rotary Club.

Born September 4, 1872, he attended Eastern Michigan University and taught in the Dowagiac area before entering the old Illinois College of Physicians and Surgeons which later became a part of the University of Illinois Medical School. He was graduated in 1904 and began practice in Vandalia in 1904, moving to Dowagiac in 1919. While in Vandalia, he served as village president and school board president.

Several years ago, he was joined in practice by his son, George.

HARPER APPOINTS CHIEF OF STAFF

Sidney Miller, M.D., who has practiced 21 years in the Birmingham-Detroit area, has been appointed full-time chief of staff of Harper Hospital. He began duties December 1 at Harper, where he did his internship and residency.

Gerber Products Company has made an unrestricted teaching and research grant to the Department of Human Development, College of Human Medicine, Michigan State University. Left to right: Dr. R. A. Stewart, Director of Research at Gerber; William B. Weil, M.D., Chairman of the Department of Human Development.

Hunt to Lead Comprehensive Health Council

Six Michigan physicians are among the 32 citizens named by Governor Romney to serve as the Michigan Advisory Council on Comprehensive Health Planning.

Andrew Hunt, Jr., M.D., Dean of the MSU College of Human Medicine, has been named chairman of the Council.

Physicians named to the Council for one-year terms expiring Oct. 24, 1969, are: Vernon V. Bass, M.D., of Saginaw; James Hagans, M.D., of Kalamazoo; and Julian Priver, M.D., of Detroit.

Winston B. Prothro, M.D., of Grand Rapids, and Herbert A. Raskin, M.D., of Detroit, were named to two-year terms ending Oct. 24, 1970; and Myron E. Wegman, M.D., of Ann Arbor, will serve a three-year term expiring Oct. 24, 1971.

Keast Appeals For More Med School Faculty

Wayne State University's School of Medicine must continue to build its faculty if it is to double present student enrollment by the time new facilities are completed, President William R. Keast told the WSU Board of Governors recently. Mr. Keast emphasized that the need for doctors, nurses, hospital pharmacists and related medical technicians "was never greater."

He pointed out that the 1969-70 operating budget request of $49.26 million was needed if WSU was to carry out its educational responsibilities. The budget, approved by the board, represents an increase of $11.09 million over the current State of Michigan appropriation of $38.18 million. Student fees and other revenue total $15.13 million, bringing the total budget to $64.39 million for next fiscal year.

Mr. Keast said a major part o the budget increase represent funds which will permit Wayn State to fill its unique role i making a much needed impac upon urban problems facing Detroit and the nation.

Zoccolillo Heads Dow Life Sciences

Roger R. Zoccolillo was appointed assistant general manage of Dow Life Sciences, the Do Chemical Company's worldwid pharmaceutical and human healt business. In his new position, Mr Zoccolillo will participate in th general management of the activi ties of Pitman-Moore Medica Company, Diagnostic Products Bio-Science Laboratories, Lepeti S.p.A. and LIFE.

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Spinal Anesthesia in Obstetrics

Safe dose of spinal anesthetic drugs used for the obstetrical patient at term in well established labor. (Primipara – 8 to 9 cm.
Multipara – 6 to 7 cm.)

For Vaginal delivery: (Saddle Block)
- Procaine hydrochloride (Novocaine):
  30 to 50 mg. with or without dextrose.
- Tetracaine hydrochloride (Pontocaine):
  2 to 5 mg. with 5% dextrose.
- Dibucaine hydrochloride (Nupercaine):
  2.5 to 3.75 mg. with 5% dextrose.

For Cesarean Section:
- Tetracaine hydrochloride (Pontocaine):
  5, 6, 7 or 8 mg. with dextrose.
- Dibucaine hydrochloride (Nupercaine):
  3.75 mg. to 5 mg. with 5% dextrose.
- Procaine hydrochloride (Novocaine):
  50 to 75 mg. with or without dextrose.

For safe management of spinal anesthesia in the Obstetrical patient:

1. Start intravenous fluids before giving spinal anesthesia with 18 or 19G needle, or 18G plastic cannula.
2. Take blood pressure, pulse, and respiration before giving spinal anesthesia.
3. Inject spinal anesthetic drug after a contraction – never during a contraction.
4. Keep patient's head elevated with pillow when patient is placed supine after giving spinal anesthesia.
5. Take blood pressure, pulse and respiration q 2 min. for first 10 min. after spinal anesthesia has been given, then q 5 min. for next 20 min.
6. Watch sensory anesthesia level for first 20 min. after giving spinal anesthesia.
7. Always have vasopressor drug (ephedrine, etc.) readily available to give intravenously, if necessary, during spinal anesthesia.
8. Always have a bag and mask, and oxygen available so that oxygen can be given by intermittent positive pressure if patient develops respiratory difficulty.
9. Always have the patient in the delivery room and keep patient in the delivery room when spinal anesthesia is given.
10. Always use careful aseptic technique in giving spinal anesthesia – be sure the drugs used have been autoclaved – (not cold sterilized).

NOTE: Use individual small ampules. **DO NOT** use stock bottle solutions.

MATERNAL HEALTH DESK REFERENCE CARD NO. 2

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Septic Abortion, With or Without Septic Shock: Diagnosis and Treatment

Cases of threatened or incomplete abortion, with or without associated septic shock, are a major problem in the current medical scene in Michigan. The history is usually one of cramps in the lower midline of the woman's abdomen, the passage of blood and clots, and tissue, in some cases from her vagina. She may have had feverishness and chills for the past 1 or 2 days. Some will admit to being 2 to 6 weeks overdue on the menses. All cases of septic abortion are best considered as being due to instrumentation of the uterus until demonstrated to be otherwise.

The findings on physical examination may be: temperature of from 96.8 to 105 F., subnormal levels indicating presence of severe infection and shock. Initial normal temperature does not preclude presence of a potentially severe and dangerous sepsis. Temperature, pulse and respiration rates should be recorded in all cases every 4 hours for the first few days so as not to fail to detect any initial wide swings, if and when they occur, these signal a dangerous degree of infection and must not be missed. Blood pressure may be normal or down to shock levels. Patient may not appear to be actually ill when first seen. Abdomen may evidence tenderness, rebound tenderness, even muscle rigidity. Uterus may be normal in size, or enlarged to size of 8 to 12 weeks of pregnancy, and may be intrinsically tender.

Sterile speculum examination may reveal bloody discharge from cervix canal; some clots and conceptual tissues may be present. Amount of discharge may vary from scant to profuse, may have foul odor. Cervix may be closed or open, firm or soft, normal in size or enlarged. There may be thickening, induration or tenderness of the bases of the broad ligaments. Tubes and ovaries may be normal and nontender, or enlarged, tender, prolapsed, and adherent to floor of lateral pelvic fornices.

Shock may be evidenced by blood pressures of 80/50, or lower, a pulse rate of 110, or higher, coolness and moisture of the extremities. Shock may be due to blood loss, to sepsis, or to a combination of blood loss and sepsis. Quickly determined white and red blood cell counts, and hemoglobin and hematocrit determinations, are of major aid in deciding the cause of shock. Shock most likely is not due to blood loss if patient's hemoglobin is 10 grams or higher, or hematocrit reading is 34 to 36 percent or higher. The venous pressure is the most reliable method of determining the need for intravenous fluids or blood transfusions. When shock thus is found not to be on basis of blood loss, it is most probably due to sepsis, in which event all major treatment efforts are best directed toward eradication of the infection. In such cases it is best not to give a blood transfusion, or more than a very slow drip maintenance volume of intravenous fluids, until such time as this can be accomplished without danger of overloading the cardiovascular system and possibly inducing decompensation. In cases of severe septic shock acidosis may be present, and blood pH determination should be made.

The following steps in treatment are given in time sequence of performance:

(1). Start 1,000 ml. bottle of 5 percent glucose in water intravenously; insert Foley catheter in bladder and connect for continuous drainage; start recordings on a fluid intake and output chart. At same time get blood samples for determination of potassium, sodium, chloride levels, the CO_2 percentage and pH values.

11-1-68

(2). Perform at once sterile speculum vaginal examination, obtaining material for culture from high in cervical canal, or uterine cavity, and have it planted as soon as possible for culture and sensitivity testing (if these culture specimens dry out or otherwise die before they are properly planted the most important and crucial guide to the best means of saving the woman's life may be lost).

(3). Next, adequate amounts of penicillin and chloramphenicol are added to the bottle of 5 percent glucose. If the woman is very ill, 6 to 20 million units of aqueous penicillin and 2 to 3 grams of i.v. chloramphenicol should be added, and they can run in as a slow drip over a period of 12 to 24 hours, and longer as necessary; 1 to 2 grams of streptomycin may also be injected intramuscularly. If the woman is not so ill, smaller doses intramuscularly and orally can be given.

(4). Lost blood should be replaced when and as indicated by initial and repeated blood cell counts, hematocrit determinations and as indicated by the venous pressure. If patient's hemoglobin is less than 10 grams, or hematocrit is less than 30 to 34 percent, a blood transfusion should be given right away, if indicated by the venous pressure. Always listen at intervals for the development of basal rales posteriorly, and cut down on the rate of intravenous flow of the blood or glucose solution, or stop them entirely, as need be, in order to prevent cardiac decompensation and pulmonary oedema. If a woman is still in shock after her hemoglobin has been brought up to 10.5 to 11 grams, no more blood should be given for the time being; an intravenous drip containing an antihypotension agent can be run in as slow as 20 drops per minute using the glucose solution. This will permit additional time for combatting her infection. Monitoring with Central Venous Pressure is an excellent aid in managing blood volume and fluid replacement.

(5). General supportive care includes the maintenance of fluid and electrolyte balance, administration of nasal oxygen is indicated, the provision for necessary periods of sleep, and the giving of reassurance.

(6). Dilation and curettage should usually be done about 24 hours after commencement of antibiotic and general therapy, regardless of her febrile state, unless such procedure probably would prove fatal; it may be performed sooner than 24 hours if there is too much uterine bleeding. This is best done with ovum ring forceps under paracervical block using 1 percent xylocaine; demerol analgesia may also be indicated.

(7). If shock is not relieved by administration of blood and/or intravenous fluids, and antibiotic agents, metarminol bitartrate (Aramine) may have to be administered by slow intravenous drip, the drug being added to a bottle of 5 percent glucose. Such therapy must be closely watched by a physician, who will take and record the blood pressure every 30 minutes or so, and will discontinue administration of the drug as soon as the blood pressure rises to levels just above the shock state. If this drug is not sufficiently potent in its effect, levarterenal bitartrate (Levophed) may be administered instead. After the drug has been discontinued, the pressure may fall again, and it will have to be administered again, but this is much better than using it continually over too long a period.

(8). Corticosteriod therapy may be indicated in a few cases, and one of the available suitable products may be given intramuscularly or intravenously. The intravenous administration of 7½% sodium bicarbonate solution is indicated only if acidosis is present. It should be given not faster than 50 ccs in 20 minutes, and 50-100 ccs is usually an adequate dosage until a repeat blood pH determination can be made."

N.B. It is important to point out that the above therapy routine in general is also suitable in cases of regular puerperal sepsis. Also, if the infection is due to the gas bacillus, or to tetanus, then special therapy with antitoxin and antiserum is indicated; in fact some physicians give such injections in all cases of criminal abortion.

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Use & Abuse of Oxytocics

Uterine rupture with resulting hemorrhagic shock (sometimes irreversible) and death of the mother as well as other unfavorable complications may result from injudicious use of oxytocics. The following Indications, Contraindications, and some possible dangers are presented as a guide to the use of this important group of drugs in obstetrics.

Some Indications for Oxytocics

1. INCOMPLETE ABORTION. To control uterine bleeding prior to surgical intervention or to complete the abortion without surgery.
2. SEPTIC OR MISSED ABORTION. To attempt emptying the uterus without surgical intervention.
3. HYDATIDIFORM MOLE. To stimulate the uterus to empty or during a molar abortion to hasten emptying or to control bleeding as with incomplete abortion.
4. ABRUPTIO PLACENTAE. After amniotomy if the cervix seems to promise early vaginal delivery.
5. POSTPARTUM UTERINE ATONY. Use oxytocics only after careful examination has ruled out retained placenta or laceration of the birth canal.
6. INDUCTION OF LABOR. For medical or obstetrical indications, such as:
    a. Diabetes mellitus
    b. Isoimmunization, Rh or other
    c. Dead fetus
    d. Toxemia — after the disease has been controlled for at least 12 to 24 hours
    e. Prolonged rupture of the bag of waters with the mother at or near term
    f. Suspected or proven amnionitis
7. UTERINE INERTIA IN UNOBSTRUCTED LABOR.
8. FOLLOWING DELIVERY BY CESAREAN SECTION.

Contraindications to Use of Oxytocics

The contraindications are as important as the indications, sometimes even more important. There is evidence that indicates measures other than oxytocics should be tried in the following conditions:

1. NORMALLY PROGRESSIVE LABOR. During the first or second stage.
2. PATIENTS WHO ARE POTENTIAL CANDIDATES FOR UTERINE RUPTURE
    a. Obstructed or possibly obstructed labor due to abnormalities of the bony pelvis or pelvic tumor,
    b. Malpresentations — abnormal vertex, transverse lie,
    c. Patients with previous cesarean section or myomectomy

11-1-68

3. MULTIPARAE WITH FOUR OR MORE CHILDREN.
4. PATIENTS, 35 YEARS OF AGE OR OLDER.
5. PATIENTS WITH ALREADY OVERDISTENDED UTERUS. Such as
   a. Hydramnios
   b. Multiple pregnancy
   c. Fetus estimated to weigh over 9 pounds
6. PHYSICAL EXHAUSTION OF THE MOTHER.
7. PATIENT WITH UNENGAGED FETAL HEAD, ESPECIALLY IN PRIMIGRAVIDA.
8. WHERE WELFARE OF THE FETUS IS ALREADY IN DOUBT, indicated by
   a. Irregular heart rate,
   b. Heart rate persistently below 100 per minute, especially during a contraction
   c. Meconium-stained amniotic fluid in cephalic presentation

Administration of Oxytocics

In the use of oxytocics the following comments should be kept in mind.

EVERY PATIENT RECEIVING OXYTOCICS MUST HAVE SOMEONE, PREFERABLY A PHYSICIAN, OBSERVE THEM CLOSELY DURING THE FIRST 30 MINUTES LEST THE PATIENT HAVE A TETANIC CONTRACTION OF THE UTERUS OR DEVELOP A SEVERE HYPERTENSION.

1. PITOCIN Except after delivery of the placenta, intravenous infusion has replaced the intramuscular or subcutaneous administration of this drug.

   Five units (0.5 ml.) of the drug is placed in 500 ml. of 5% dextrose in water. The infusion is started at a rate of 8 to 12 drops per minute. Tetanic uterine contraction must be watched for and fetal heart tones checked frequently. If there is a tetanic uterine contraction or the fetal heart tones drop below 100 per minute, especially during a contraction, the infusion should be stopped immediately.

   During the first 30 minutes uterine contractions, fetal heart tones, blood pressure, and pulse are to be checked every 3 to 5 minutes. If significant abnormalities are found the infusion should be stopped and the situation carefully evaluated.

   After 45 to 60 minutes without any adverse effects the rate of flow may be increased up to 20 drops per minute if effective labor has not begun. Usually administration for 3 to 5 hours is sufficient for any one continued infusion.

2. SYNTOCIN This drug is given in the same dose, with the same technic, and with the same precautions as for Pitocin.

3. SPARTEINE SULPHATE (TOCASAMINE) The use of sparteine sulphate (Tocasamine) for the induction of labor or strengthening contractions cannot be recommended.

MATERNAL HEALTH DESK REFERENCE CARD NO. 4

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Suggested Standards of Prenatal Care

Good prenatal care significantly reduces maternal and perinatal mortality.

1. All pregnant women should have a complete history, and a general physical examination, including pelvic examination, with pelvic measurements and an evaluation of bony pelvic capacity, during the first trimester. Early examination is particularly important in high risk patients with major medical diseases and/or previous obstetrical complications.

2. Initial laboratory studies should include:
   - a) Urinalysis; glucose, albumin, and microscopic examination of a clean midstream specimen (to rule out asymptomatic bacteriuria).
   - b) Blood hemoglobin or hematocrit.
   - c) Determination of Blood type, and the presence of the Rh factor, with Rh antibody titers in Rh negative women.
   - d) A serological test for Syphilis.
   - e) A smear for presence of Gonococcus, when indicated.
   - f) A Papanicolaou smear from the cervix, where indicated by multiparity or age, or unless a smear has not been taken in over a year.
   - g) Additional tests may be indicated, e.g., glucose tolerance test, kidney function tests, blood chemistry, etc.

3. The patient's current status as to Polio and Tetanus immunizations should be determined, and where deficient, they should be immunized for both, according to the individual judgement of the physician.

4. Early consultation may be warranted when the course of a medical illness may affect or be altered by the pregnancy. Pregnant patients with heart disease, Diabetes Mellitus, or other medical complications, require close observation and supervision during the entire pregnancy and puerperium.

5. Weight gain of not more than 15-20 pounds is advised in normal patients. Diet should consist of 1800-2000 cal. daily, with about 80 Gm. protein, 200 Gm. carbohydrate, and 90 Gm. of fat. Reduction to 14-1500 cal. daily may be advised for obesity. Daily sodium requirements may be limited to 1 Gm. or less in the presence of edema, hypertension, diabetes, multiple pregnancy, or a history of previous toxemia. Multiple vitamin and iron supplements may be indicated. (Because of possible teratogenic effects, especially during the first twelve weeks, drugs administered should be clearly indicated.)

11-1-68

6. Prenatal examination should be made at least monthly during the first 6 months, every 2 weeks during the 7th & 8th months, and weekly thereafter. More frequent examinations may be indicated in special situations, such as threatened toxemia, Diabetes, heart disease, multiple pregnancy, etc.

    a) Unless urgent, diagnostic radiography should be deferred until after the pregnancy.
    b) Urinalysis for albumin and glucose should be performed at each office visit. Significant bacteriuria should be treated even if asymptomatic.
    c) Weight, blood pressure, fundal measurement, fetal position, fetal heart tones, presence of edema, presence of abnormal vaginal discharge, should be checked at each prenatal visit.

7. At 28 weeks gestation, repeat hemoglobin or hematocrit, breast examination, and the determination of Rh antibody titer in Rh negative women, should be done.

8. With a history of mid-trimester premature labor repeated speculum exam (as often as once weekly) may be indicated for the detection of the incompetent cervix.

9. Hospitalization for investigation, consultation, and treatment of all women with actual or suspected major complications of pregnancy should be considered particularly in the presence of increased blood pressure, persistent albuminuria, in a clean catch specimen, or both, since the prevention of pre-eclampsia is one of the chief goals of prenatal care.

Derived in part from Manual of Standards in Obstetric-Gynecologic Practice — The American College of Obstetricians and Gynecologists.

MATERNAL HEALTH DESK REFERENCE CARD NO. 5

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Immediate Post Partum Hemorrhage

There are very few more sudden, more abrupt, and more dangerous emergencies in all of medicine than an immediate post partum hemorrhage. The successful management of this catastrophe depends upon its anticipation, if possible, and upon prompt and almost automatic course of action when it occurs.

The three common causes are: uterine atony, retained placenta, or laceration of the birth canal.

PREVENTION There are certain conditions that are associated with an increased danger of post-partum hemorrhage.

1. Any condition that produces an over-distention of the uterus, such as multiple pregnancy, hydramnios, or an exceptionally large infant.
2. Any previous scarring of the uterus, such as a previous cesarean section, extensive myomectomy, or previous hysterotomy.
3. Inertia in the first stage of labor with poor uterine contractions.
4. Prolonged labor with maternal exhaustion.
5. Operative procedures, especially version and extraction.
6. Deep surgical anesthesia.
7. Any ante or intra partum bleeding, as from abruptio placenta, placenta previa, etc.

During their prenatal course, all patients should have their blood typed and an Rh factor determination performed. This information should be in the patient's chart on admission.

All birth rooms should be adequately equipped for prompt emergency care of the patient that is hemorrhaging. Adequate personnel should be available.

All patients admitted should have a hematocrit or hemoglobin determination.

Should any of the above predisposing conditions exist, certain preventative steps should be taken:

1. Blood should be made available.
2. When delivery becomes imminent, a 15 to 18 gauge needle or catheter should be placed in a vein, and kept open with 5 percent glucose and water. This latter precaution allows an oxytocic to be given intravenously after the birth of the infant or the placenta, it permits an infusion of an oxytocic in a dilution of 5 units in 500 cc glucose & water, it permits blood transfusion if this is necessary, and it permits withdrawal of blood for a clot observation test.

11-1-68

DIAGNOSIS When a post-partum hemorrhage does occur, a definite and prompt routine of action is necessary.

1. The nursing attendant should as quickly as possible, give 5 units of oxytocic intravenously, as a single dose, draw blood sample for typing and cross-matching, start an infusion of 5 units of oxytocic in 500 cc of 5 percent glucose in water, and do a clot observation test when indicated. All this can be done with one needle insertion.
2. The physician should introduce one hand into the uterus, supporting that organ from the outside with the other hand. Any placental fragments should be searched for and removed. Systematic exploration for possible rupture follows, each lateral wall being palpated, next the fundus, then the anterior and posterior walls, with particular care in palpating the lower uterine segment. The cervix and vagina should be visualized. Adequate exposure is most important.
3. The attending physician should immediately request adequate help and consultation.

TREATMENT Uterine atony will usually respond to exploration and oxytocics (Pitocin, Syntocinon, & Ergot preparations), The infusion should be continued for several hours. An indwelling catheter is advisable to prevent overdistention of the bladder. Uterine packing or hysterectomy are seldom necessary.

Hemorrhage from retained placenta or fragments usually responds to the removal of the tissue.

Lacerations of the cervix and vagina should be detected and repaired promptly. Occasionally, a cervical laceration may be so extensive that hysterectomy is required. Rupture of the uterus demands exploration abdominally, and frequently hysterectomy. Rarely, the rupture can be repaired and the uterus spared.

Blood loss should be promptly replaced. When blood is not yet available, plasma expanders should be administered to maintain blood pressure.

Less frequent causes of immediate post-partum hemorrhage may be encountered. Hypofibrinoginemia (abruptio placenta, dead fetus syndrome, amniotic fluid embolus), other bleeding diatheses, and coagulation defects, placenta accreta, inversion of the uterus: all should be considered, and appropriate therapy instituted.

Prompt recognition, prompt management, and judicious blood replacement constitute the key to success in the management of immediate post-partum hemorrhage.

MATERNAL HEALTH DESK REFERENCE CARD NO. 6

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Premature Separation Of The Normally Implanted Placenta

This complication of pregnancy is an important contributor to maternal mortalities in the State of Michigan, but is even more of a contributor to peri-natal mortalities. In its severe form, still-birth often accompanies "Abruptio Placenta."

Abruptio Placenta must always be considered in the differential diagnosis of 3rd trimester bleeding, before or during labor. It is commonly associated with toxemia of pregnancy, pre-existing hypertension, with or without super-imposed toxemia, increasing maternal age, multiparity, uterine fibroids, renal disease, usually chronic glomerular nephritis, and hydramnios with sudden decompensation from rupture of the membranes. It may also occur independent of these conditions.

PATHOLOGY

Maternal blood loss from the separated portion of the placenta, produces the clinical picture and possibly afibrinogenemia. The bleeding may be vaginal or hidden (often with more severe symptoms). As the separation increases, the uterus reacts with contractions which may range from productive, rhythmical contractions to board-like tetany. Pain, a prominent feature, is produced by stretching of the uterus by the retroplacental bleeding (concealed bleeding). Often the pain is localized by the patient to one area of the uterus.

CLINICAL PICTURE

The severity of symptoms and findings, vaginal or concealed, resulting pain, consistency and tenderness of the uterus, degree of maternal shock and condition of the infant, are determined by the degree of placental separation.

As the clinical picture worsens, the blood ceases to clot due to the reduction of circulating maternal fibrinogen. Fetal embarrassment, fetal jeopardy, and fetal death, occur in succession as the condition worsens.

MANAGEMENT

If the diagnosis is established or suspected, management should proceed as follows:

(1). Appraise the patient: a. as to the severity of the disease, b. and the state of blood coagulability, c. estimate the probable length of labor, all things considered.

(2). Draw sufficient blood from the mother for typing and cross-matching, and for a clot observation test, as a simple method of determining blood coagulability. (5cc of blood in a clean tube should form a firm clot in 5-10 min.) A circulating fibrinogen level should be determined at this time, and followed at hourly intervals. (Normal — 150 mg% or more.)

(3). Start an infusion of 5 percent glucose in water, thru a large needle (No. 17 or 18).

(4). Call a consultant.

(5). Perform a vaginal examination with a double set-up:

11-1-68

    a. To determine the degree of effacement and dilatation of the cervix.
    b. To rupture the membranes. This should always be done, once the diagnosis is established, no matter what type of delivery may follow.

(6). Give whole blood transfusions (fresh blood if available) as indicated by blood loss and degree of shock. Blood over 24 hours old is poor in fibrinogen. Blood loss is often under-estimated.

(7). Give human fibrinogen if hypofibrinogenemia exists, when there is failure to respond to fresh blood infusion.

(8). Delivery is the immediate goal for abruptio placenta and its complications, and should be effected by whatever route seems safest for mother and infant.
    a. VAGINALLY, if the cervix is "ripe," if the severity of abruption and hence the amount of shock and evident bleeding is not too severe, and if delivery can be expected in a very short time (consistent with maximum safety of mother and infant).
    b. BY CESAREAN SECTION, if the cervix is not "ripe," with expectation of a labor longer than 4-6 hours, if the hypofibrinogenemia is corrected or quickly correctable, in severe abruption, or if delay for vaginal delivery would jeopardize the life of mother and infant.

An excellent summary on Abruptio Placenta has been written by C. Paul Hodgkinson, MD, and John Neufeld, MD, appearing in Clinical Obstetrics & Gynecology, September, 1960, published by Paul B. Hoeber, Inc., Medical Division of Harper & Brothers.

"Because of the seriousness, as well as the risk of post-transfusion hepatitis, blood, plasma, or dried fibrinogen infusions should be rigorously restricted to those recipients with clear cut indications for its use" — communication from H. D. Anderson, Ph.D., Biological Products Section, Michigan Department of Health.

MATERNAL HEALTH DESK REFERENCE CARD NO. 7

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Toxemia Of Pregnancy-Pre-Eclampsia-Eclampsia

Toxemia of pregnancy is characterized by edema, hypertension, and proteinuria, first appearing during the second half of pregnancy, except with hydatidiform mole. It continues to be an important cause of maternal and infant mortality, but its progression can be prevented by early recognition and proper treatment.

ETIOLOGY

Not clearly established. Occurs more often in young primagravadas than in older multiparas. Mothers with diabetes, multiple pregnancy, hypertensive vascular disease, pyelonephritis, glomerulonephritis, and hydatidiform mole, are particularly susceptible.

PATHOPHYSIOLOGY

The toxemic process occurs in two phases (not clearly demarcated): sodium retention phase, and sodium retention plus vasoconstriction. Edema is based on sodium retention. The generalized vasoconstrictive phase causes hypertension, reduced renal blood flow, (decreased urinary output), and characteristic retinal changes (retinal sheen and decrease in caliber of retinal arteries). Cerebral ischemia is the cause of coma and convulsions.

DIFFERENTIAL DIAGNOSIS

Toxemia must be differentiated from hypertensive vascular disease, HVD plus toxemia, pyelonephritis, and glomerulonephritis. Retinal changes and complete urinalysis of a clean voided mid-stream specimen, aid in differentiating. Culture and colony count help to diagnose pyelonephritis. RBCs and casts in urine point toward glomerulonephritis. Toxemia produces albuminuria, but no WBCs or RBCs are found in urine, in early stages.

CLINICAL COURSE

First evidence of abnormality: weight gain exceeding one pound per week followed by edema, then proteinuria. Rise of 20-30 mm of Hg above base-line BP is suggestive. All signs are exaggerated as condition worsens.

CHARACTERISTIC SYMPTOMS

No symptoms of early pre-eclampsia, only physical findings of excessive weight-gain, edema, and blood pressure rise. Headache, blurred vision (edema of retina), scotomata, occur as late symptoms. Epigastric pain and vomiting indicate impending eclampsia.

PREVENTION

Best preventative is observation and early recognition, i.e., good prenatal care. Low sodium diet, restriction of activity (phenobarbital, ½ gr. qid, decrease in physical and emotional stress), careful, frequent observation, plus thiazide diuresis (if indicated) may prevent progression to generalized vasoconstriction and true toxemia.

TREATMENT

Principles

Recognize developing pre-eclampsia, apply available measures, and if no response, deliver.

Office Treatment

1. Restrict activity (as above under prevention).
2. With excessive weight-gain, prescribe thiazide diuretic (hydrochlorothiazide) 25-50 mg. daily; (chlorthalidone) 50 mgs daily to prevent progression.
3. Re-examine every 3-5 days.
4. If poor response, limit sodium intake to 2-4 Grams daily. With weight loss stable or dropping BP, and negative urine, re-examine every 3-5 days. Diuretic and anti-hypertensive effect of thiazides, may be potentiated by Acetazolamide, 250 mg. bid, every 3-5 days.
5. If patient fails to respond, with further weight gain, and has increasing edema and BP, proteinuria, or toxic symptoms, admit to hospital. DO NOT ATTEMPT IMMEDIATE DELIVERY. Stabilize the patient's condition before attempting delivery if this is possible.

11-1-68

Hospital Treatment

1. Call consultant obstetrician.
2. Weigh patient daily and record.
3. Record intake and output.
4. Take and record BP at least four times daily.
5. Determine daily quantitative 24 hour albumin.
6. Check hematocrit and type and cross-match for available blood.
7. Check serum uric acid. (Thiazides may cause rise.)
8. Order low sodium diet (1.5 to 2.0 Grams).
9. Re-check hematocrit and uric acid every 3 days.
10. Continue diuretic therapy, if indicated. Successful therapy is suggested by: 1. weight loss, 2. stabilization or fall in BP, 3. reduced proteinuria, 4. stable hematocrit, 5. normal uric acid.

Patient should remain in hospital until cervix is ripe for induction, and should then be induced. Occasionally, if true recovery, may be sent home if under 32 weeks gestation. Persistent albuminuria is indication for induction. If sent home, should be followed closely by obstetrician, and examined once or twice weekly.

Patients who have had eclampsia, must **NOT** be sent home until delivery is accomplished and adequate post-partum recovery is accomplished.

Failure of therapy is indicated by reversal of above findings (Paragraph 4 under office treatment), indicating progression to generalized vasoconstriction.

Treatment of Severe or Fulminating Toxemia

A variety of anti-hypertensive agents, alone or in combination, may be used, patient being monitored constantly.

Anti-hypertensive Agents

1. Reserpine, 2.5 mg. IM, every 12 hours, attempting to control vasoconstriction.
2. Hydralazine (Apresoline), 20-30 mg. IM or IV, slowly.
3. Veratum, 2.5 mg. IM, when diastolic pressure arises above 90 mm. Hg. as indicated.
4. Various combinations or other anti-hypertensives are available and useful. McCall's solution (Unitensen, 30 mg. and Apresoline, 20 mg. in 1000 cc of glucose in water) may be given as slow IV drip, provided physician personally remains at bedside during administration.

Other Measures

Many authorities advise administration of magnesium sulfate in eclampsia according to the following schedule.

a) 4 grams in 20% solution — IV — at the rate of one gram per minute, then 10 grams in 50% solution IM (3″ needle No. 20).
b) If convulsions continue repeat 4 grams in 20% solution IV.
c) 5 grams in 50% solution IM q 4 hours until delivery and for 24 hours after.

CAUTION: a) Patellar reflex must be present
b) Urinary output greater than 100 cc every 4 hours.
c) Normal respiration must be present.

If convulsions occur, pentobarbital sodium, slowly IV, will usually control them.

When severe pre-eclampsia or eclampsia is stabilized, usually accomplished in 12-48 hours, DELIVER THE PATIENT. Medical induction with oxytocic drip often succeeds even with unfavorable cervix. If not in active labor in 8-12 hours, deliver by Cesarean Section.

Abruptio Placenta may accompany toxemia (See Desk Reference Card No. 6).

POST-DELIVERY CARE

Continue pre-delivery care until:

1. BP is stabilized, 2. Urinary output is adequate, 3. Symptoms are relieved.

Essential Hypertension

Women with essential hypertension are prone to develop acute toxemia with similar signs, but more fulminating course. Treatment is similar to Pre-eclampsia.

Abruptio Placenta can usually be prevented by early delivery if acute toxemia develops.

MATERNAL HEALTH DESK REFERENCE CARD NO. 8

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)
(The material below is derived from Technical Bulletin No. 5, March, 1965, edited by the American College of Obstetricians and Gynecologists)

Infant Resuscitation

All obstetricians, anesthetists, house officers, and nurses assigned to the delivery room should receive detailed instructions and supervised training in the resuscitation of newborn infants.

Responsibility for the organization, implementation, and supervision of such training should be clearly established in all hospitals caring for maternity patients. Often this is shared by the Chief of Obstetrics and Gynecology with the Chief of Anesthesiology. Resuscitation of the newborn in the delivery room is the responsibility of the attending obstetrician. Situations in which resuscitation is required often occur unheralded. The most experienced person present in the delivery room should be delegated by the obstetrician to assist in the establishment of respirations. He should not delay calling those skilled and experienced in administering positive pressure oxygen and in intubating the larynx to assist him or to assume the responsibility for resuscitation when these methods might appear needed.

The fundamentals of establishing respirations and of active resuscitation of depressed infants are outlined in this section.

Fundamental Principles

1. The normal newborn baby usually breathes within a few seconds after delivery. Most will establish respiration within one minute and need little or no assistance. Some, however, may require active resuscitation.
2. Amniotic fluid will flow from the mouth and nose by gravity. Thick fluid or mucous requires direct pharyngeal aspiration.
3. Prolonged pharyngeal stimulation (as with a catheter) may inhibit respiratory efforts and decrease the heart rate.
4. The basic principle in establishing respirations for the normal and for the sick infant is to provide an open air-passage as quickly and reliably as possible after birth.
5. The alert infant usually can open his own air-passage and keep it open. Depressed and comatose infants do not have the muscle tone and strength to open their air-passage against the force of gravity and surface tension. The simple maneuver of moving the tongue from the posterior pharyngeal wall either directly or by lifting the jaw forward will provide an open airway in most cases.
6. The physiological condition of the newborn infant should be assessed within one minute after birth. Several types of observation may help make this evaluation:
    a. General Condition. The newborn may be assessed as alert, depressed or comatose (the limp, "rag doll").
    b. Heart Rate. If the heart rate is below 100, hypoxia probably is present. The heart in the comatose infant cannot be heard at rates much below 40 per minute, but umbilical pulsation may be visible. The amplitude of umbilical pulsation often is a good indication of circulatory status in the newborn.
    c. Apgar Score. The newborn is rated 0, 1, or 2, in each of five categories: (1) heart rate, (2) rhythmic respirations, (3) muscle tone, (4) reflex irritability, and (5) color. A score may range from 0 to 10; a baby with a score of 10 is a near-perfect baby, physiologically. (Apgar ratings should be determined at one and five minutes.)

Management of the Newborn

1. GENERAL
    a. KEEP THE HEAD AND FACE OF THE INFANT DOWN AND THE MOUTH OPEN AT ALL TIMES DURING AND IMMEDIATELY AFTER DELIVERY.
    b. During or immediately after birth gently aspirate the nasopharynx or oropharynx once or twice with a soft rubber bulb syringe or a suction catheter.
    c. After the cord is clamped, the infant should be placed on the receiving table where further care may be given. The infant should be evaluated at this time and the decision made as to necessary resuscitative steps. If possible, this should be done within one minute of birth.
    d. Procedures such as care of the eyes, complete physical examination, et cetera, should not be done until spontaneous respirations are well established.
    e. It is important that the infant be observed carefully during the first ten minutes of life to insure that adequate respiration continues.
    f. The infant should be wrapped to maintain normal body temperature.
2. THE ALERT INFANT, APGAR SCORE 8-10, HEART RATE OVER 100.
    No additional treatment other than continued observation is necessary.

11-1-68

3. THE DEPRESSED INFANT, APGAR SCORE 5-7, HEART RATE BELOW 100.
   a. Place a two-inch thickness of rolled towel under the shoulders if the infant is in the supine position, or a one-inch thickness in the axilla if the semi-lateral position is chosen. Be certain that the head is hyperextended and that the tongue is pulled forward.
   b. Stimulate the baby by flicking and stinging the toes, feet, or buttocks, and by blowing cold oxygen over the face. Too vigorous and too painful stimuli may, however, add to the depression.
   c. Occasionally additional pharyngeal fluid may accumulate. This should be aspirated gently, but not continuously, until the infant shows active swallowing.

4. THE COMATOSE INFANT, APGAR SCORE 0-4, HEART RATE BELOW 100.
   a. The apneic or comatose baby needs prompt attention by trained personnel.
   b. This baby should be placed immediately on the receiving table, the head hyperextended, the airway cleared, and the pharynx carefully suctioned.
   c. Mild painful stimuli occasionally may serve to rouse the sleepy infant to respiratory effort.
   d. If apnea and depression persists for more than one minute, artificial ventilation should be instituted with mouth-to-mouth breathing, intermittent positive pressure oxygen with the bag and mask unit, or a positive pressure resuscitator. These should be accomplished by an operator familiar and skilled in the use of the apparatus and in maintaining a patent upper air-passage.
   e. Pressure between 15-20 cm. H_2O usually are safe for repeated inflations. Initial inflation, however, may require 25-35 cm. H_20, and, occasionally, 35-50 cm. H_2O. Several types of apparatus are available which deliver safe pressures, but at the present time no mechanical device for delivering oxygen under pressure is sufficiently flexible to meet all situations. The use of alternating positive and negative pressures is of no proven value and may do harm.
   f. If the thorax does not expand with intermittent positive pressure oxygen, laryngospasm and/or obstruction from the tongue may be present. Correct the latter with pressure at the angles of the mandible or with proper placement of an oropharyngeal airway. Laryngospasm can be treated by forceful prognathous and positive pressure oxygen or tracheal intubation.
   g. Intubation of the larynx should be done by those skilled in this technique. It is indicated in the following conditions:
      (1) If the improvement in the normal depressed infant has not been obtained after pharyngeal and laryngeal toilet and intermittent positive pressure oxygen.
      (2) For the obviously limp, "rag doll" baby regardless of heart rate and despite occasional gasps.
      (3) For any episode of cardiac arrest in the infant, including stillborn infants delivered for fetal distress.
      (4) For tracheal aspiration of infants born in thick meconium or infected amniotic fluid.
   h. Intubation of the larynx should be done under direct vision using a proper infant laryngoscope.
      (1) After inserting a snug-fitting endotracheal tube, foreign particulate matter (vernix, blood) should be aspirated once through the tube before blowing gas into the lungs.
      (2) Intermittent positive pressure oxygen should be given by mouth-to-tube, bag and mask, or mechanical resuscitator. High pressure may be necessary initially to inflate the non-aerated lung. Subsequent inflations are administered at lower pressures.
      (3) The pharynx should be cleaned of fluid before removing the endotracheal tube because gastric content may accumulate in the pharynx subsequent to ventilation of the lungs.
   i. External cardiac massage is indicated if 30 seconds of lung ventilation do not produce signs of improving circulation. This is done by compressing the heart between the sternum and the vertebral column.
   j. Intracardiac adrenalin is indicated at one minute if ventilation of the lung and external cardiac massage do not show signs of improving circulation. 2.0 cc. of a 1:10,000 solution of adrenalin in saline are introduced through a 1½" needle 2 cm. from the midline in the fourth intercostal space.
   k. Respiratory stimulants are of no value (Metrazol, Alpha-lobeline, Coramine, et cetera). (Nalline hydrochloride may be of value in the prevention of narcotic apnea in over-dosage of the mother).

5. ADDITIONAL MEASURES.
   a. Record the infant's condition at birth and the Apgar Score at one minute. Also record the time of sustained respirations. In addition, record all resuscitative efforts on the Newborn Physical Examination sheet.
   b. Every infant should receive a careful physical examination in the delivery room to discover congenital malformations. If dyspnea, cyanosis, stertor, or excess pharyngeal secretions persist, diagnostic studies to rule out pneumothorax, tracheo-esophageal fistula, diaphragmatic hernia, and hypoplasia of the lung should be made before transfer to the observation nursery. A 10 Fr. suction catheter should be passed into the pharynx to rule out choanal atresia. Passage of a catheter into the stomach will help diagnose a tracheo-esophageal anomaly.
   c. Antibiotic administration should be carefully considered after extensive resuscitative measures.
   d. Transfusion is indicated when the baby shows extreme pallor and shock secondary to fetal blood loss. It should be seriously considered if one infant of a multiple pregnancy is alert and the other shows depression and pallor.
   e. CO_2 levels should be determined as quickly as possible.

6. INDICATIONS FOR EXTENDED SPECIAL ATTENTION.
   a. Resuscitated infant — initial Apgar Score of 4 or less, comatose at birth.
   b. Premature infants.
   c. Infants delivered by cesarean section.
   d. Infants with congenital malformations.
   e. Infants of diabetic mothers.
   f. Respiratory distress syndrome.
   g. Iso-immunization.
   h. Maternal drug addiction.

MATERNAL HEALTH DESK REFERENCE CARD NO. 9

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

The Management of the RH- Sensitized Patient

1. An Rh determination and an antibody screen for atypical antibodies should be done on all maternity patients at the time of the initial visit to the physician or clinic. If the antibody screen is positive, the antibody should be identified and titered. If the screen test is negative, the screen test should be repeated at 26-28 weeks.

2. If the patient has antibodies in the Rh system, amniocentesis should be performed at 28-29 weeks and repeated at intervals, according to the results. If there is a history of previous still-births or fetal hydrops, it should be done earlier (24 weeks).

TECHNIQUE OF AMNIOCENTESIS

1. The amniocentesis should be performed one inch below and one inch lateral to the umbilicus, on the side of the fetal small parts, or in any area where fetal small parts are palpable. (It may be necessary to obtain a single anterior-posterior film of the abdomen to be sure.) Be sure the patient's bladder is empty.

2. The abdomen should be prepared with the same careful technique used for abdominal surgery.

3. The site chosen and the underlying tissues should be anesthetized with a local anesthetic agent such as 1 percent Xylocaine.

4. While holding the fetal head with one hand, a 5 inch, 18 gauge spinal needle with stylet should be introduced into the amniotic cavity. Release the needle so that if it contacts the fetus the point will move freely.

5. Remove the stylet and withdraw 10 cc. of amniotic fluid into a sterile syringe. Replace the stylet and withdraw the needle.

6. It is important to put the fluid immediately into a sterile opaque container to *prevent exposure to light.*

7. As soon as possible after the amniocentesis, centrifuge the fluid for 15 minutes (a standard centrifuge is satisfactory) and remove and save the supernatant. This will remove any blood or vernix which might interfere with the examination.

8. The fluid may be preserved for several weeks, refrigerated in a sterile container, without loss of critical absorption peaks if it is not exposed to light.

9. If fluid is not obtained on the first attempt, choose another area and repeat the procedure. If blood is obtained, a sample should be sent for blood type and Rh determination, and a second tap should be attempted. Blood obtained will usually be maternal blood. If it should be fetal, Coombs and hemoglobin determinations will give much information about the condition of the infant.

POSSIBLE DANGERS

1. Increased sensitization of the mother. This is theoretically possible but seems to be a very infrequent incident.

2. Injury to the placenta. This too has been reported but infrequently.

3. Injury to the baby. Because of this possibility, it has been suggested that the fetal position be determined accurately and the needle be pointed away from the fetal head.

4. Amnionitis. Sterile technique is most essential.

EXAMINATION OF THE FLUID

The fluid is examined in a spectrophotometer. The absorption curve consists of the optical density plotted against the wave length of the light passing through the fluid at various wave lengths between 350 and 650 millimicrons. This is plotted on a logarithmic scale. The difference of the optical density at 450 mu between the speci-

11-1-68

men and the normal is determined. This difference is the figure reported by the laboratory. It is then plotted on the accompanying chart.

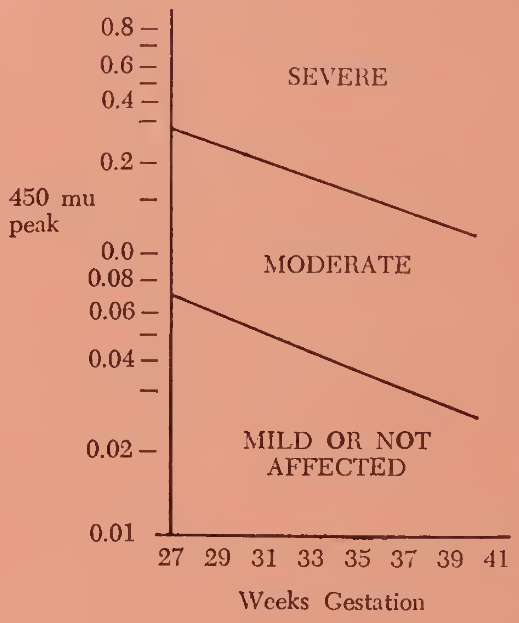
The attending obstetrician who is not well versed in these procedures should seek consultation at an early stage of pregnancy.

INTERPRETATION OF THE RESULTS

1. If the figure reported is low and remains low at the time of the second amniocentesis, the infant will be Rh negative, or Rh positive but mildly affected by the disease. Spontaneous labor may be allowed to ensue. This does not mean that the infant may not require exchange transfusion. It does mean that the baby will be born with an adequate hemoglobin and in good condition for the exchange transfusion.

2. If the figure reported is in the mid range, the infant will probably require exchange transfusion and should be delivered prior to term. The higher a reading in the middle zone, the more urgent is the indication for early delivery. Babies with repeated upper zone readings should be delivered as soon as they are mature (usually 36 weeks).

3. If the figure reported is high (in the severe range), there is no question that the infant is severely affected by the disease. An intra-uterine transfusion should be considered unless the infant is mature enough to be delivered. This is especially important if this mother has lost previous infants from erythroblastosis.



TIMING OF AMNIOCENTESIS

1. Initial fluid taken at 28 weeks.

2. Low and low middle zone reading: Repeat in two weeks.

3. High zone readings: Repeat in one week. If less than 36 weeks, transfuse. If 36 plus weeks, deliver. At 26-28 weeks, repeat tap weekly.

4. Middle zone readings: Repeat taps at 10 day intervals.

PROGNOSTICATING FROM SERIAL READINGS

1. Falling values indicate less severe disease, eg 1. upper middle zone, 2. lower middle zone – the infant may be only moderately affected – some have even been Rh negative.

2. Rising readings indicate a worsening condition. A rise into the high zone is very serious. Intra-uterine transfusion or immediate delivery are usually indicated, depending on fetal maturity.

In communities where laboratory facilities are inadequate for testing the supernatant amniotic fluid, specimens may be mailed to either of the addresses listed below:

1. c/o J. Robert Willson, M.D.
Professor & Chairman, Dept. of Obs & Gyn, Women's Hosp.,
U. of Mich. Medical Center
Ann Arbor, Mich. 48104

2. T. N. Evans, M.D.
Professor & Chairman, Dept. of Obs & Gyn, Wayne State University of Medicine
1400 Chrysler Expressway, Detroit, Mich. 48207

Complete identification of the specimen and a short history would be of value, and either of the above will offer consultation in management.

MATERNAL HEALTH DESK REFERENCE CARD NO. 10

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Ectopic Pregnancy

Since the great majority of pregnancies occurring outside the uterine cavity will be found in the tube, this discussion will be focused upon the diagnosis and treatment of tubal pregnancy. Being constantly alert to the possibility of a tubal pregnancy in any woman in the reproductive age is imperative if it is to be diagnosed and treated before serious complications develop.

SYMPTOMS AND DIAGNOSIS

Postponed, protracted, or any abnormality of menstruation would be suggestive of extra-uterine pregnancy. When accompanied by pain, often vaginal bleeding, low-grade fever, leukocytosis, and/or a mass to one side of the uterus, ectopic pregnancy must be the major working diagnosis until proper evidence can exclude it.

Symptoms vary with the stage of the disease when the patient is seen — before, during or after rupture.

Before rupture the pain is vague. Perhaps it may be felt as discomfort, indefinite distress, soreness, or very mild cramps. There is no fever or leukocytosis because there is little peritoneal irritation from blood in the abdomen. Often the mass is too small to be palpated on bimanual examination.

During rupture a positive diagnosis is more easily made. The pain is more severe, located on one side of the lower abdomen, with frequent referred shoulder pain. Exacerbation of pain followed by complete relief is particularly significant. The cervix is exceedingly sensitive to movement. Vaginal bleeding may be intermittent or constant, but seldom is it profuse. Fever and leukocytosis may be present because there is bleeding into the peritoneal cavity. A tense, pulsating, exquisitely tender mass now is usually felt with ease.

After rupture, the diagnosis is usually easy because of the history of agonizing, one-sided pain, signs of massive internal hemorrhage, followed by nausea, vomiting, fainting, shock and collapse. The pulse is rapid and feeble, and the skin is cold and pallid. In addition there is shallow breathing, air hunger, restlessness, and extreme anxiety.

On the affected side, the abdominal wall is tender and rigid, and a soft doughy mass may be present. At times it may extend over the entire abdomen.

In addition to the above symptoms and findings, there often is a significant past history of infertility, "one child sterility," or a previous ectopic pregnancy.

PROCEDURES USED IN ESTABLISHING A DIAGNOSIS

1) Pregnancy tests, if positive, will demonstrate the presence of living chorionic tissue. If negative, the test is valueless.

2) Pelvic examination, usually without anesthesia, is essential.

3) Culdocentesis can be an important aid, and is indicated in any suspected case. With the patient in the lithotomy position, the posterior lip of the cervix is pulled an-

11-1-68

teriorly with a tenaculum and the vaginal wall is punctured approximately ¾" posterior to the cervix, using a long No. 16 or 17 needle, which has been slightly blunted, and a 10 c.c. Luer-lok syringe. If free, blood-stained watery fluid is obtained, the diagnosis of intra-abdominal bleeding is indicated, and if the fluid removed does not clot, it is established.

4) Dilatation and Curettage may be helpful when reports can be obtained promptly. The presence of chorionic villi is proof of intra-uterine pregnancy, but the finding of decidua without villi is suggestive of tubal pregnancy. (Decidua may be found post-abortion.)

5) Posterior colpotomy and culdoscopy may be helpful for those trained in these techniques, but it is recommended that proper exploration of the pelvis and salpingectomy is always accomplished more definitively and safely through a lower abdominal incision.

DIFFERENTIAL DIAGNOSIS

This is concerned chiefly with the differentiation from abortion, salpingitis, appendicitis, and pelvic tumor.

In abortion the bleeding is usually more profuse, the pain intermittent as uterine cramps. Villi and fetal parts may be seen in the expelled material.

In salpingitis there may be known gonorrhea, positive smears, purulent discharge, gradual onset, no enlargement or softening of the uterus, and a less circumscribed (usually bilateral) mass.

In appendicitis there are no menstrual abnormalities, no evidence of pregnancy, and usually no mass.

Ovarian cysts are usually much larger than a pregnant tube, pain is uncommon, menses have usually been normal, and the uterus feels non-pregnant.

Mittelschmerz occurs at mid-cycle.

MANAGEMENT

It is best to remove the offending ectopic gestation as soon as possible after the diagnosis has been established. Prompt operation before or during rupture will avoid the frank bursting of the tube with its tragic consequences.

In acute tubal rupture, blood should be drawn for CBC, Rh testing, typing and cross-matching, and IV fluids started with a large gauge needle or catheter. A second intravenous route should be established. An operating room should be ready and operation begun at once. Blood should be transfused as soon as available. Those who await recovery from shock lose precious time and more precious blood.

Rapid entry into the peritoneal cavity is essential. Palpation should promptly reveal the side involved, and clamping and ligation will control bleeding, often with dramatic improvement in blood pressure and general condition of the patient. Peritonealization should be attempted, if feasible. In massive hemoperitoneum, sacrifice of the ovary may be unavoidable. In cases diagnosed before rupture, preservation of the tube may be possible.

The operation should be quickly done and no other elective operation should be considered. When the bleeding is stopped, do no more — "get in and get out."

Removal of clotted and unclotted blood found in the peritoneal cavity may be helpful in prevention of peritoneal irritation, infection, and formation of adhesions, with subsequent damage to the remaining tube.

MATERNAL HEALTH DESK REFERENCE CARD NO. 11

(Sponsored and Prepared by the Committee on Maternal Health, Michigan State Medical Society)

Diabetes and Pregnancy

1. Pregnancy is accompanied by diabetes in 2 per cent of cases. Pregnancy aggravates the diabetic state and diabetes in turn seriously affects the outcome of pregnancy. Maternal mortality is not increased despite the fact of increased maternal morbidity. There is a considerable perinatal mortality – the classic accident being fetal death in utero.
2. **DETECTION:** is most important. A urine analysis should be performed at each prenatal visit. Glycosuria must always be investigated. Attention is directed in addition to those women who have any of the following: a family history of diabetes, history of a birth of an infant weighing 9 lbs. or more, unexplained stillbirth, anomalies, unexplained by diagnosis, obesity or suggestive vascular lesions. Minimal investigation would involve securing a fasting and 2-hour postprandial blood sugar level. Levels above 110 and 130 (true glucose) suggest diabetes, and above 130 and 150 are diagnostic of overt diabetes.

   In the absence of frank diabetes a 3-hour glucose tolerance test should be done after the administration of 100 grams of glucose orally. Normal result – fasting 90, 1 hour 165, 2 hours 145, 3 hours 125 (mgm% true glucose). If two or more of these levels are exceeded but the fasting level remains less than 110 mgm%, the patient must be regarded as having chemical diabetes.

   For a valid result the patient must have had normal dietary intake for 3 days prior to the test and must have retained the glucose load.

   It may be necessary to recheck a questionable result in the succeeding trimester. After delivery gestational diabetes clears very rapidly so that a positive glucose tolerance test may not be obtained in the puerperium.

   Renal glycosuria occurs frequently during pregnancy, presumably due to a marked increase in the volume of glomerular filtrate.
3. **CLASSIFICATION:** (Priscilla White)
   - A. Chemical diabetes (abnormal response to glucose tolerance test).
   - B. Diabetes with onset after the age of 20 years and less than 10 years in duration.
   - C. Diabetes with onset between the ages of 10 and 19 years or of from 10-20 years duration.
   - D. Diabetes with onset prior to 10 years of age or of more than 20 years duration or having demonstrable retinal or leg vessel changes.
   - E. Diabetes with roentgen signs of pelvic vascular disease.
   - F. Diabetes with nephropathy.
   - G. Diabetes with multiple obstetric failures.
4. **EFFECT OF PREGNANCY ON DIABETES:**

   Pregnancy makes increasing demands on maternal insulin reserve and is thus diabetogenic. Subclinical diabetes is unmasked and overt diabetes worsened. The degeneration of carbohydrate tolerance is most marked during the second and third trimesters. The risk of ketosis and acidosis is increased. There is an increased incidence of toxemia related to preexisting vascular disease. There will be a progression of complications such as nephropathy.
5. **EFFECT OF DIABETES ON PREGNANCY:**

   There is no impairment of fertility or increase in abortion rate in the adequately treated diabetic. The principal effects are upon the fetus which is liable to unexpected intrauterine death in the last weeks of pregnancy. At birth the infants are large, edematous and suffer from inadequate pulmonary ventilation. The infant must often be delivered prematurely. 2-3% of the infants have serious anomalies in the cardiovsacular or gastrointestinal tracts.

   The perinatal mortality is 10-15% in good clinics ranging from 5% in Class A to about 50% in Class D. The appearance of toxemia or diabetic acidosis markedly increases perinatal mortality.
6. **TREATMENT OF THE PREGNANT DIABETIC:**

   Care should be given concurrently by the obstetrician and internist. Class A: Diet, close supervision and delivery at or near term. A small daily dose of NPH insulin sufficient to maintain the postprandial blood sugar within normal limits (130 mgm % or less), will minimize the characteristic fetal changes in these patients.

   Class B, C, D, & E: All require insulin (oral hypoglycemic agents have not been accepted for use in pregnancy). The maternal insulin requirement increases and as a result more than one daily dose of insulin may be required.

   Diet must be constructed to permit a normal weight gain with reference to the patient's ideal weight (30 calories per kgm of ideal weight) and should contain a minimum of 1.5 gms/kilo of protein, 40% of the total carbohydrate and the remainder fat.

   Control should be such as to maintain fasting and 4:00 P.M. blood sugar below 130 mgm %.

   Hospitalization should be resorted to freely for the control of the diabetic state and any medical or obstetric complications.

7. TIMING OF DELIVERY:
   The patient with Class A diabetes may be delivered at or near term in the absence of complications or an over large infant but should not be allowed to go beyond term.
   The patient with insulin dependent diabetes Class B, C, D, etc., should be delivered between the 36th and 38th weeks, either vaginally after induction of labor or by cesarean section. Prolonged induction should be avoided.
   Serial total urinary estriol output is one index of the integrity of the fetoplacental complex. Beyond 35 weeks, levels below 12 mgm. are unsatisfactory, and levels below 5 mgm., if confirmed, are considered critical.
   Nephropathy is an indication for therapeutic termination of pregnancy.
8. THE INFANT OF THE DIABETIC MOTHER: often delivered prematurely should be observed for the following:
   1. Respiratory Distress.
   2. Hypoglycemia (beginning about 2 hours after birth, commonly transient blood sugar level should be checked on cord blood and at 3 and 7 hours and calories given early by the oral or intravenous route).
   3. Hyperbilirubinemia.
   4. Hypocalcemia (stridor, tetany).
   5. Increased hematocrit with possible venous thrombosis.
   6. Increased incidence of major anomalies.

   Qualified pediatric supervision is a prerequisite to the care of the newborn of the diabetic mother.

ESTRIOL EXCRETION IN PREGNANCY

RATIONALE: Estriol excreted in the urine of pregnant women serves as a valuable indicator of fetal well-being. Estriol excretion reflects fetal status for two reasons: a) the bulk of maternal urinary estriol is produced by fetus and placenta, and the fetus is mandatory in estriol biosynthesis. b) Estriol transfer to the mother is rapid and virtually complete. The mother excretes estriol without major delay or further metabolism into the urine. Thus maternal urinary estriol excretion reflects truly and promptly its feto-placental production. Fetal distress and/or placental insufficiency cause a rapid decrease in estriol production, and estriol excretion drops without delay.

WHEN ARE ESTRIOL DETERMINATIONS HELPFUL?

Estriol determinations are helpful in any situation where fetal distress is suspected and termination of pregnancy might reduce the risk of intrauterine or neonatal fetal death. Normal estriol excretion indicates fetal well-being and allows the continuation of pregnancy, thus preventing unnecessary prematurity and reducing the risk of perinatal mortality.

Estriol excretion is routinely measured during the last 10 weeks of pregnancies complicated by DIABETES, HYPERTENSION, TOXEMIA and POSTMATURITY.

Serial estriol determinations are preferred since there are daily individual variations, largely due to fetal size. The larger the fetus, the more estriol is produced and excreted. Constant or increasing estriol excretion, checked twice weekly (or more frequently in certain cases) during late pregnancy when termination of gestation would be feasible, indicates good fetal development.

Extremely low estriol values indicate FETAL DEATH.

WHEN MIGHT ESTRIOL DETERMINATIONS BE MISLEADING?

1. In cases of RH-ISOIMMUNIZATION, urinary estriol determinations do not indicate hazards to the fetus.
2. Low estriol excretion might be found in cases of MATERNAL ADRENAL INSUFFICIENCY and ANENCEPHALIC BABIES, while the fetus does perfectly well.
3. MATERNAL KIDNEY FAILURE causes low estriol excretion despite normal estriol production by a well-functioning feto-placental unit. Plasma estriol determination may help in these cases.

METHODOLOGY

Urinary estriol is measured in the Gynecologic Endocrine Laboratory, Women's Hospital, University of Michigan Medical Center on 1% or 0.5% aliquots of a 24-hour urine collection. Radioactive estriol glucosiduronate is added before analysis to the urine. This is the form in which more than 90% of the estriol is excreted during late pregnancy. This addition of radioactive material permits correction for procedural losses. Our method eliminates any technical error and provides accurate, precise and specific results.

ACCURACY:	100.5% ± 2.2% recovery of estriol glucosiduronate added to 10 ml urine of a normal male subject.
PRECISION:	± 4.3% (Standard deviation).
SPECIFICITY:	The material measured is chromatographically pure.
TIME FOR ASSAY:	One working day = 8 hours.

NORMAL VALUES

The following table indicates normal values of estriol excretion during the 2nd half of gestation.

Weeks of Gestation	Estriol mg/24 hrs.	Weeks of Gestation	Estriol mg/24 hrs.
20	7	32	22
22	9.3	34	26
24	11.1	36	31
26	13.5	38	36
28	16	40	45
30	19		

HOW TO SEND SPECIMENS

Approximately 40 ml of a well-mixed total 24-hour urine collection are required. The result cannot be more accurate than the urine collection and the measurement of its volume ("total volume"). The Gynecologic Endocrine Laboratory supplies plastic containers and mailers upon request. The containers include a preservative. Mailing by "Special Delivery" is strongly recommended. When sent by special delivery, the specimens are usually received on the morning following the day they have been mailed. The results are given by telephone. Completion of the short questionnaire included in the mailers furnishes all information which is necessary for a useful interpretation of the results.

The Gynecologic Endocrine Laboratory
Uwe T. Goebelsmann, M.D.

MSMS, AMA Recommendations Offered Re Medical Society Acceptance of Federal Funds

Guidelines have been developed and approved by The MSMS Council for acceptance of federal funds by a medical society. The formal action by The Council is reported in the official minutes of The Council, outlining the following recommendations:

MSMS RECOMMENDATIONS

"One — That the Recommendations of the AMA Council on Medical Service as approved by the AMA House of Delegates be accepted as guidelines for MSMS policy. (The AMA guidelines follow)

"Two — That all programs involving direct use of government funds by component societies be presented to The Council, MSMS, for evaluation.

"Three — That information be obtained from other state or county medical societies who have established mechanisms such as a foundation, nonprofit corporation, or other entity, separate from the society itself and served by independent administrative staff providing direct operational administration of government funds, without involvement of the medical society as a body, and that this information and the above guidelines be disseminated to component societies, and be a part of some early conferences of the MSMS."

These three recommendations now are part of MSMS policy.

AMA RECOMMENDATIONS

A Council on Medical Service report regarding medical society participation in government medical programs was adopted as amended by the House of Delegates. The Report set forth five recommendations providing guidelines to medical societies as follows:

"1. That this Association reaffirm past recommendations that state and local medical societies assume active responsible leadership in reviewing and setting standards for existing health services in their communities and in the evaluation, planning, developing, improvement, and augmentation of appropriate existing and new services.

"2. That this Association affirm the principle that state and local medical societies including federal funds, in conformity with recommendation #3 below, but only when such funds are essential for the society to maintain its proper role in the development of community health services and when formal agreements permit the society authority over the provision of medical care in accordance with the Principles of Medical Ethics.

"3. That this Association affirm that, in the continuance of its role of responsible leadership, a state or local medical society may enter into agreements with government agencies to administer health care programs and to have the administrative costs of such programs financed from governmental funds. The agreement must provide that such administration does not contravene the ethical precepts of the profession or interfere with the individual physician's freedom to exercise his professional judgment to protect the best interest of the patient. The society should use some mechanism such as a non-profit corporation or other entity, separate from the society itself, and serviced by an independent administrative staff, where possible, to avoid direct operational involvement of the medical society as a body.

"4. That this Association reaffirm its long-established policy that personal care is primarily an individual responsibility and that federal aid in financing care for those unable to pay should be provided only in conjunction with other levels of government — community, county and state. In individual situations, federal grants for research, demonstration, or pilot projects in methods of providing and financing health services may be permissible, but only under the condition that such new mechanisms, if found useful, be incorporated into the ongoing federal state-local programs for those in need, and, for those not in need, the usual private medical care financing methods were appropriate.

"5. That this Association point out that there are hazards to the medical society in involvement in government programs, whether at the developmental or the operational level, and that such involvement should be undertaken only after detailed study and review by the members of its potential impact. Any operational role undertaken by the society in such a program should be conditioned on the society's also having a voice in the planning, and any change in the society's role should be conditioned on prior review and consent by the society. Any contractual agreements entered into by the society, in regard to such programs should be for specific, limited periods of time, preferably not more than one year, and should be renewable only on agreement by the society."

ACTIVITIES, PROJECTS

Laboratory Facilities Council to Implement New Licensing Law

The Laboratory Facilities Council, a new advisory group to the State Department of Public Health, has been named in implementing a state law effective January, 1969 requiring the licensing of clinical laboratories.

The Council members are: Leo Walker, MD, Lansing; Harold Bowman, MD, Grand Rapids; Norman W. Arends, DO, Flint; Edna Andrews, PhD, Detroit; Arthur Jordan, M.S., Detroit; Robert Foy, PhD, Lansing; and Eugene M. Britt, PhD, Ann Arbor. The Council held its first meeting October 30 to review proposed rules under Act 235, P.A. 1968.

The Council's principal responsibility will be establishing rules setting up standards for licensing laboratories in and out of hospitals with the usual procedures of holding public hearings and legal clearances by the State Attorney General before adoption.

Rawling Serves Again As Vietnam Volunteer

John C. Rawling, M.D., Flint, is in Vietnam serving the civilian population through the AMA Volunteer Physicians for Vietnam program.

The two-month stay is a return visit for Dr. Rawling who worked in Vietnamese hospitals and also on the SS Hope hospital ship at Saigon during 1961. In the intervening time he has lectured and helped to raise funds for the medical-assistance program. He also made another trip aboard the SS Hope, serving in Trujillo, Peru, in 1963.

HUME, POMEROY LEAD ORTHOPAEDIC SOCIETY

Leaders of the Michigan Orthopaedic Society are H. Ross Hume, M.D., Detroit, president; Richard W. Pomeroy, M.D., Lansing, president-elect, and George Stilwill, M.D., Lansing, secretary-treasurer.

The officers were elected at the annual fall meeting of the Society in Detroit.

MSU, STATE HOSPITAL BEGIN JOINT PROJECT

An affiliation with Pontiac State Hospital providing for instruction of resident physicians and Michigan State University medical students has been approved by the MSU Board of Trustees and the state hospital.

Planned programs include field trips and summer extern programs for MSU medical students, exchange of residents in psychiatry, and faculty appointments for qualified members of the Pontiac staff.

Academic appointments in the College of Human Medicine will be offered to the medical superintendent and other qualified physicians on the hospital staff.

Leach, McClendon Honored by NAACP

J. Leonidas Leach, M.D., Flint physician for 46 years, and James J. McClendon, M.D., a practicing physician in Detroit for almost 40 years, were recently honored by the Michigan State Conference of NAACP branches. Both men are members of the executive board of directors of the National Association for the Advancement of Colored People.

Doctor Leach was cited for "his pioneering efforts for freedom, equality and civil rights as an early president of the Flint chapter of the NAACP and former president of the Michigan State Conference." Doctor McClendon received a similar citation for his long leadership of the Detroit chapter. Doctor Leach was the first Negro president of the Michigan Academy of General Practice. Doctor McClendon has been active in many civic organizations including the Detroit Metropolitan Area Regional Planning Commission, the Baptist Church, YMCA, and Booker T. Washington Business Association.

MSU ADDS REHABILITATION SPECIALIST FROM OHIO

John F. Lane, M.D., of Cleveland, has been named medical director of the Rehabilitation Medical Center in Lansing and associate professor of medicine at Michigan State University. MSU reports that Doctor Lane will play "a major role in the development of a model community program for the rehabilitation of stroke patients."

Doctor Lane has been a physiatrist and neurophysiologist with the Department of Physical Medicine and Rehabilitation in Cleveland's Highland View Hospital, and also an assistant professor of medicine and an associate in the Department of Physiology at Case Western Reserve Hospital.

Mary Jordan, right, Eaton Rapids, president of the Michigan State Medical Assistants Association, acccepts the state's first-place publication award in the "states with membership over 200" category from Wilda Haines, Canton, Ohio, awards chairman, during the American Association of Medical Assistants convention in Columbus.

X-Rays Show Transplanted Teeth Successful at U-M

Clinical tests and X-rays were described by oral surgeons at the University of Michigan School of Dentistry last month which showed that teeth have been transplanted successfully between related patients.

In the operation performed in February 1968 under local anesthetic, two bicuspids were extracted from 16-year-old Margy Batten and transplanted into the upper jaw of her 13-year-old brother, Bill, both of Elkhart.

The girl's bicuspids were impacted — and her brother's had never developed, so the transplant was attempted. For six weeks the teeth were held in place with stabilizing wires, much like a regular brace.

Now, eight months later, X-rays show that a new layer of dentin is being formed inside the pulp canal; new sockets have developed in the jaw; and both teeth are viable. A conventional pulp test indicates that the nerve supply is migrating into the new teeth.

James R. Hayward, D.D.S., head of dental oral surgery at the University of Michigan Hospital, said, "Although heterogenous tooth transplants (between different individuals) have been attempted for centuries, this may be the first instance in which the teeth survived with a viable pulp."

Unlike the heart transplants, immunosuppressive drugs were not used in the tooth transplant.

MEDISCENE

Dec. 11 – Eighth Annual Wayne State University Thyroid Workshop, Wayne County Medical Society Auditorium, Detroit

Dec. 11-13 – 14th Annual In-Service Training Conference, on Chronic Illness, Division of Adult Health, Michigan Department of Public Health, Holiday Inn South, Lansing

Dec. 18 – The Council, MSMS Headquarters, East Lansing

Jan. 20-24 – Michigan Cancer Foundation and American College of Physicians, "The Internist and Total Cancer Care," McGregor Memorial Center, Wayne State University, Detroit

Jan. 29 – The Council, MSMS Headquarters, East Lansing

Jan. 30 – State Woman's Auxiliary to MSMS, Board of Directors, MSMS Headquarters, East Lansing

Feb. 3-10 – Childrens Dental Health Week

March 12 – The Council, MSMS Headquarters, East Lansing

March 20 – Second Annual Cancer Conference for Nurses, Michigan Division American Cancer Society, Rackham Building, University of Michigan

March 20-21 – AMA Conference on Rural Health, Philadelphia-Marriott Motor Hotel, Philadelphia

March 26-27 – Eighth Annual Michigan Conference on Maternal and Perinatal Welfare, Pick-Durant Hotel, Flint

April 30 – The Council, MSMS Headquarters, East Lansing

May 7-9 – Michigan Public Health Association Annual Meeting, Pick-Durant Hotel, Flint

May 21 – Annual Muscle Symposium, Wayne County Medical Society Auditorium, Detroit

June 4 – The Council, MSMS Headquarters, East Lansing

July 13-17 – AMA Annual Meeting, New York City

July 31-Aug. 2 – MSMS Midsummer Session of The Council, Boyne Mountain Lodge, Boyne Falls

Sept. 28 – The Council, Sheraton-Cadillac Hotel, Detroit

Sept. 28-Oct. 3 – Michigan State Medical Society Annual Session, Sheraton-Cadillac Hotel, Detroit

SOCIO-ECON

Prizes Awarded in State Contest for Best Hospital Money-Saving Suggestions

Employees of 25 Michigan hospitals recently shared $5,000 in cash awards in the Tenth Annual Search for New Hospital Achievements, cosponsored by the Michigan Hospital Association and Michigan Blue Cross.

The presentations were made during the annual Mid-Year Meeting of the Michigan Hospital Association House of Delegates at Traverse City.

The judges were faculty members from Michigan State University's College of Business and Human Medicine.

Selected to receive the Grand Award in this year's contest was Mrs. Jean C. Woelfel, a registered nurse from Bon Secours Hospital in Grosse Pointe. Mrs. Woelfel's description of the hospital's disaster control drills utilizing "live" victims stressed the importance of staff preparedness and immediate action during disaster conditions.

Special Awards for "Achievement Directly Related to Patient Care" went to: C. M. Kopp, M.D., director of clinical laboratories for W. A. Foote Memorial Hospital in Jackson; and Ben Hashemi, chief pharmacist at Children's Hospital in Detroit.

Honorable mention winners include: Robert Cole, Michael Ward and William J. Weber, M.D., of Ingham Medical Hospital in Lansing.

24-44 Age Group In State to Grow Fastest, 1965-85

Michigan's projected population growth is changing in the size of the various age groupings, so reports the U.S. Department of Commerce, Bureau of the Census.

The accompanying chart depicts the changing age structure over the period from 1965 to 1985. It is estimated the population will increase 30%, with the 25-44 age category growing the fastest at 50%, while the 45-64 age bracket will remain relatively constant by increasing just 6%.

These changes will create additional demands on our economy to fulfill the varying needs of the people. Housing must grow to meet the specific requirements of retirees as well as family-formers; services, both personal and public, will have to match; recreational facilities should be developed and diversified in a way to satisfy both "grandma" and the "teenage swinger."

Employment availability needs to expand to accomodate the growing size of the 18-84 age group. Educational demands will vary during this period between K-8, high school, and college requirements; and, finally, our senior citizens will require additional medical care and increased social security benefits in line with the 41% growth of this group.

In a recent opinion survey of Illinois physicians, 81% of those polled favored government grants to newly graduated physicians who agree to practice a certain number of years in medically deficient areas.

EMPLOYMENT FORECAST FOR MEDICAL AND OTHER PROFESSIONAL SERVICES BY REGION — 1960 and 1980

Region	1960	1980	Change in Number	Change in Percent
Jackson Area	9,744	29,000	19,256	198
Benton Harbor - St. Joseph Area	8,168	24,000	15,832	194
Kalamazoo - Battle Creek Area	20,748	61,000	40,252	194
Lansing Area	20,031	58,000	37,969	190
Flint Area	17,527	50,000	32,473	185
Traverse Bay Area	6,457	18,085	11,628	180
Saginaw Bay Area	22,984	63,200	40,216	175
Grand Rapids - Muskegon Area	32,572	88,915	56,343	173
Alpena Area	2,646	7,200	1,554	172
Eastern U.P. Area	4,186	11,000	6,814	168
Western U.P. Area	7,625	20,000	12,375	162
Detroit 7 County Area	177,232	439,000	260,000	147

The Role of the Non Physician In Utilization Review

BY GORDON TAAFFE
CARL JOSEPHSON
BOTH OF MICHIGAN BLUE SHIELD

A complete medical record is an accumulation of a variety of documents pertaining to the medical care a patient has received as a consequence of illness, injury, or the prevention of illness. For hospital patients, the documents are generated by diverse departments and people within the hospital. For example, patient identification data, complaint, present illness, past history, clinical laboratory reports, and X-ray reports are some of the kinds of information that find their way to the medical record, also known as the patient's case history or as charts.

Upon discharge from the hospital, the Medical Records' Librarian catalogues the various source documents in the case history in an orderly fashion and files the history for future reference. Future reference may be review of the case history by a group of physicians in order to evaluate the quality of medical care the patient received while he was hospitalized.

Typically, in utilization review of medical care, a group of physicians review the contents of a case history for evidence of quality of medical care contained in the history. There is a legal precedence for such a review for Medicare patients,[1] and there is also professional interest[2] in utilization review for all hospitalized patients. For example, the American Medical Association[3] approved a resolution with respect to the objectives of utilization review: the review committee should "evaluate the quality of medical care on the basis of documented evidence to support diagnosis, treatment, and justified utilization of hospital facilities." The review process, however, is subject to considerable variability.

IN THE FIRST PLACE, present methods of selection of cases for review do not insure that all cases which need to be reviewed will, in fact, be selected for the utilization review committee. Selection of cases for review is often relegated to the Medical Records' Librarian, for example, who may pick out well-kept case histories rather than representative cases of typical or unusual patterns of medical care. The review committee may select its own cases but, with a large number of cases of varying complexity, it is difficult to select objectively all of the case histories which need to be reviewed.

In addition, highly specialized care may require the evaluation of a specialist for adequate review and members of some of the highly technical specialties may not be on the review committee. Individual differences among physicians create considerable variability in the quality and quantity of reports entered in the medical record. In this respect, traditional hospital-based utilization review is subject to inter-hospital variation.

ALTHOUGH INDIVIDUAL case review of medical case histories by a group of physicians is basic to utilization review, the non medical professional has much to offer in creating uniformity and objectivity in the review process. The systems analyst, for example, could define precisely what information is needed in the case history that is both necessary and sufficient for an adequate review of that history. The operations researcher could determine parameters of medical care and objectively select case histories that depart significantly from the parameters.

Data accumulated by a prepaid group health insurance agency affords a broadly based utilization review system that would permit reviewing variability between hospitals and at the same time include home and office care with inpatient stay. A broadly based computer-assisted utilization review program would release the review physician from many time consuming administrative aspects of reviewing case histories and at the same time

> The reluctance of the physician to become involved in utilization review probably is due to a variety of reasons. Of these, the most important is his concern that it is another job that he doesn't have time to do. The purpose of this article (the fifth in a series on Utilization Review) is to show that the busy, dedicated physician doesn't have to do it alone; in many ways the non-medical professional can be helpful.
>
> —Louis F. Hayes, M.D.
> Vice President, Medical Affairs
> Michigan Blue Shield

give the opportunity for objectivity in selecting all cases which need review.

All cases needing review would be brought to the attention of the review physician through a computer-assisted review system based on parameters of medical care.

A DIVERSE GROUP of non medical professionals would be needed to implement the utilization review program outlined above. Data processing specialists, for example, would be key personnel to the system. Developing parameters of medical care based on length of stay, costs, and procedures for particular diagnoses and medical conditions is a highly technical problem. Statisticians and operations researchers would cooperate on this developmental aspect of the program. Computer identification of cases for review would be the first objective of this review program.

A by-product of the identification process would be a listing of selected cases with community standards for comparable cases. Secondly objectives would be a preliminary screening of selected cases prior to review. In this way, the review physician would not only have case histories whose records depart in some particular from standard medical practices, but he would also know what the standard is.

Although quality of care is evaluated against medical criteria, indexes of typical care are available to review physicians from a variety of non medical sources. Vital statistics, for example, provide much "base line" information about births and deaths in the general population as well as figures on the incidence and prevalence of diseases. The rapidly burgeoning field of medical economics is amassing data about the organization, administration, and delivery of medical services.

Medical economics is concerned with the costs of providing care and also with values received. Not only is medical care being evaluated in terms of surgery, laboratory services, drugs, length of hospital stay, and other strictly medical problems, but also health services are being considered with respect to cost-benefit analyses, patient satisfactions, type of practice, allocation and distribution of medical services in relation to demand for these services and many other aspects of the medical system. White[4] states "the term 'quality of medical care' has unfortunate pejorative connotations. It assumes, first, that there are objective methods for distinguishing 'good quality' from 'poor quality' care and, second, that there are a substantial number of physicians who much of their time do less than their best work." White suggests that the incidence of incompetence among physicians is low but that the circumstances under which a particular physician works can lead to inefficiency. Many standards and evaluative indexes of medical care can be derived from non medical disciplines. That is to say, those things contributing to the organizational efficiency of medical services and to the sociological and psychological evaluation of the end product of medical care can come in part from non medical personnel.

THE CONTRIBUTION OF THESE non medical personnel is distinct from the medical contribution but is relevant to the overall efficiency of the medical system. In summary, non medical personnel in utilization review can contribute to:

1. Uniformity and standardized medical records.

2. Development of computer-assisted techniques for identification of medical records in need of review.

3. Development of computer-assisted techniques for preliminary medical evaluation of patient care.

4. Assessment of community patterns of patient care.

5. Assessment of community attitudes and behavioral patterns toward medical problems.

6. Efficiency in the organization, administration, and delivery of medical care.

7. A broadly based utilization review system.

State Official Serves On HEW Grants Committee

Serving on the 18-member Grants Administration Advisory Committee of HEW is Paul H. Wileden, Director, Budget Division, Executive Office of the Governor, Bureau of the Budget of the State of Michigan.

The committee comprises eight members of the Department of Health, Education and Welfare and 10 public members who are involved in health, education and welfare programs in State Departments and State budget offices, public and private universities and hospitals, medical schools and private non-profit foundations.

LEGAL

LARYNGEAL NERVE DAMAGE IN THYROIDECTOMY

(Editor's Note: The following article is quoted from the AMA Citation newsletter of October 15, 1968, prepared by the AMA Law Department.)

A patient suing a physician for laryngeal nerve damage suffered in a thyroidectomy may rely on the physician's own testimony on the standard of care in order to establish a *prima facie* case of professional negligence against him. Setting aside a directed verdict for the physician, a Michigan appellate court remanded the case for a new trial on the issue of negligence in the performance of the operation. The court further held that there was no jury question as to the physician's alleged failure to obtain the patient's informed consent.

The patient had a normal woman's voice before the operation was performed in March, 1957. The physician noted during the operation that her laryngeal nerves were normal in appearance. After the operation, her voice was hoarse, rough, and harsh, and much different than it had been before the operation. The physician told her that the condition would clear up. However, the condition allegedly persisted until the time of the trial, nine years after the operation.

MEDICAL COLLEGE
GEO. CRENSHAW

"Let me know if this prescription works. I'm having the same trouble myself."

The patient consulted a second physician sometime after the operation. He diagnosed her condition as laryngeal nerve paralysis. That diagnosis was confirmed by physicians at two hospitals.

The physician testified that, although the laryngeal nerves are within the field of operation in a thyroidectomy, the nerves can and should be avoided. Since he had performed more than 100 thyroidectomies prior to the one involved here, he was qualified to testify as to the accepted standard of care in the community in the performance of a thyroidectomy, and the patient could rely on his testimony in attempting to establish a *prima facie* case.

Moreover, there was expert medical testimony tending to show a violation by the physician of his duty to avoid injuring the patient's laryngeal nerves, although such testimony was not as explicit as is desirable. While the patient's medical expert did not state that the patient's laryngeal nerve had been cut during the operation, he did state that there was an injury to the nerve that was attributable to the operation. In view of that evidence, a verdict should not have been directed for the physician.

There was, however, no jury question as to the physician's alleged failure to obtain the patient's informed consent to the operation. Whether a physician should, before operating, advise the patient of all possible results, so that he may intelligently give or withhold consent to the operation, depends on the accepted practices in the community. The patient testified that the physician did not explain anything about the thyroidectomy prior to its performance. However, there was nothing in the record to show that it was standard practice to discuss the possibility of laryngeal nerve injury. The physician testified that the patient was told what to expect by way of results. However, when, as here, the result is unexpected and caused by an allegedly negligent act, the lack of informed consent cannot be proximately related to the patient's injuries. — *McPhee v. Bay City Samaritan Hospital,* 159 N.W.2d 880 (Mich., March 29, 1968; rehearing denied, May 28, 1968)

Physicians Can And Do Help Make State Laws

BY M. A. (MIKE) RILEY
MSMS LEGISLATIVE COUNSEL

On January 8th, 1969 the 75th Michigan State Legislature will swing into action in Lansing and, within a few weeks, organize itself and establish deadlines for the processing of approximately four thousand proposed bills during its two-year tenure.

It can reasonably be expected that well over 200 of these proposals to be made in 1969 and 1970 will suggest important new laws, or important amendments to existing laws, in the medical practice area. Perhaps an equal number of bills will relate in some way to the broader classification of "health care."

CLEARLY, THE MEDICAL profession has ample cause to take an active interest in the legislative process, since such a significant proportion of the matters considered by the State Legislature directly affect the practice of medicine and thus the quality and cost of care.

By the time of final adjournment of the Michigan Legislature in 1970 several scores of health law amendments or completely new laws will have been added to the statute books.

Every citizen of Michigan CAN have an impact on the decisions of the State Legislature, and this is particularly true in the case of doctors of medicine, because health legislation is nearly always technical in nature and those who must pass upon it genuinely require, and appreciate, the informed viewpoints of professionals.

Yet, no citizen, physician or non-physician, can have an impact upon the legislative process unless he avails himself of the means at his disposal to participate in that process. At times, of course, lawmakers will seek out public opinion (through polls, questionnaires, and the like) but far more frequently the bulk of opinion on a given proposal which is expressed to legislators comes to them through the initiative of the interested party.

WHEN A VITALLY important health law is under legislative consideration, therefore, which affects every citizen it should be expected that each lawmaker WILL hear from many people — people who take the time and trouble to write to him, wire him, telephone him, or actually visit with him either in his home area or in the State Capitol. Many people WILL avail themselves of the various means at their disposal to express their views. *Vis-a-vis* the vitally important health proposal, it is obviously desirable that many of those who express opinion are physicians.

Without belaboring the point, since doctors of medicine are by no means a majority of the general population, and since health legislation increasingly interests more and more people, the absolute NECESSITY for physician liaison with lawmakers is all too clear. All of the physicians in a community may concur in the inadvisability of a proposed health law, may discuss it among themselves at medical meetings, in the hospitals and in chance social gatherings — but they will have no impact whatsoever on the State Legislature unless they convey their views to their elected representatives. Meanwhile, a mere 5% of the general community (which may numerically outnumber the physicians ten to one) may actually be importuning those representatives to PASS that objectionable law.

SINCE THE LEGISLATOR'S job is to represent, to the best of his ability, all of the people of his constituency he is not to be faulted if he does not have the opportunity to weigh the views of those who are really best qualified to advise him. Neither is he to be faulted for failure to seek out professional opinion, for he has not one or two, but perhaps hundreds of proposed bills on scores of subjects to consider.

LOBBYING

The Michigan State Medical Society employs staff personnel to act as an operating arm of the Society's Legal Affairs Committee which, in turn, is advisory to The MSMS Council. A "lobbyist" is one who is paid to legislatively represent a group or a position. In the case of proposed health legislation, the members of the State Legislature WILL hear from MSMS' representatives in Lansing and, as the exception rather than the rule, they will also hear supporting, or sometimes conflicting, views from a large number of "lobbyists" who represent other health-related groups, other professions and other organizations.

"Lobbyists" are essential to the legislative process, a fact now universally accepted. Their activity is legally recognized and legally regulated, and for the most part is carried on forthrightly and respectably. They are frequently recognized by lawmakers as experts in the particular area of interest of their employers, and THEY are frequently sought out by members of the Legislature for technical information. They must, if they are to be effective at all, have a reputation for honesty and dependability.

The "lobbyist," moreover, exercises effectiveness dependent upon the reputation and expertise of his employer. Since the medical profession indeed enjoys the very highest order of respect, its representatives in the Legislature are privileged to benefit from the high regard in which lawmakers hold their employers.

No lawmaker in Lansing would PREFER to receive his information on a technical medical matter from the "lobbyist" rather than from his constituent physicians back home. If he does not have an open channel of personal communications with doctors of medicine, however, there is still an avenue open to him in his workshop in Lansing to ascertain medical opinion. The "lobbyist" WILL seek him out, and alert him to matters of great interest to the medical profession.

Thus there are two mechanisms simultaneously in operation, each of which complements the other — day-to-day representation in the Capitol itself by the "lobbyist," and person-to-person contact between physicians and their own legislators in both the home areas and the Capitol itself. Neither is a substitute for the other, and between the two it is the latter which is indispensable.

WE CAN, AND DO, ALL HELP MAKE OUR LAWS — and we have a very real choice in outcomes. We can help to make them good ones by realizing that our elected representatives ARE accessible and DO welcome constructive contact. We can all help to make our laws bad ones by simply not participating in the process.

TO: Our Advertisers:

We extend our sincere thanks for your patronage during 1968.

Your support of **Michigan Medicine** has enabled us to produce a publication worthy of its place in medical literature.

Your support also makes it possible to provide important socio-economic, political, legal information for our members.

Our members have found your advertisements informative and helpful in securing or prescribing accepted products and services during the past year.

Our best wishes for a successful and prosperous 1969.

Michigan Medicine.

Let's Abolish Criminal Insanity

BY STATE REP. ROY SMITH, CHAIRMAN,
SPECIAL COMMITTEE ON MENTAL HEALTH
LEGISLATION FOR CRIMINAL CASES
OF YPSILANTI

The theory that the insane person should not be held responsible for his crimes, that "the madman is punished by his madness alone," appears to be universally regarded, by lawyers and laymen alike, as one of the great enlightened principles upon which our system of justice is based.

As a layman who has recently, in conducting an extensive legislative study, been privileged to discuss related specific questions with some of the best psychiatric and legal authorities available, I question this age-old, time-honored theory, for two reasons:

First, I see little evidence, in either our laws or the level of financial support we give our mental institutions, that we have ever really believed this principle.

Second, even if we did believe it, I wonder if this theory isn't inherently unworkable?

LET'S LOOK, FOR EXAMPLE, at the plea and verdict of "not guilty by reason of insanity." The best-known example I could cite of the popular concept of how this verdict works would be the novel *Anatomy of a Murder,* which was written by a former Michigan Supreme Court Justice, under the pen-name of Robert Traver. Most everyone who read that great best-seller of 1958, or saw the Otto Preminger movie made from it, was probably left with warmly-renewed faith in our legal system.

In this story, it may be remembered, a cool-mannered Army lieutenant killed the man who had raped his wife, then insisted in court that he could remember nothing of the shooting. Considerable doubt was cast on his story, but this didn't matter. The jury, like the reader, wanted to see the lieutenant acquitted. And the insanity verdict by offering a means of freeing him proved its wonderful and enduring value, even if occasionally misused.

Although reportedly based upon an actual case, there is one troublesome flaw in the picture painted by this story: under a Michigan statute that was repealed only in 1966 (P.A. 175 of 1927, Sec. 766.15C), any person found not guilty of murder by reason of insanity had to be committed to an institution for the criminally insane — not until found to be sane but, unless a governor intervened, *for the remainder of his natural life!*

MEANWHILE, THE AVERAGE person found *guilty* of murder appears to have been serving about 15 years in prison.

If the kindly old judge in *Anatomy of a Murder* had followed the law, as real-life judges generally do, the lieutenant would not have been freed. Instead, he'd have stayed on in a county jail for months, waiting for overcrowded Ionia State Hospital to admit him. His first glimpse of his future home would probably be somewhat reassuring; he'd see no fence or wall around the buildings, nothing to suggest a prison.

Once inside, though, he'd soon wish there was a wall. When hospitals are forced to serve as custodial institutions, a certain price has to be paid. Wherever the lieutenant went, from the oppressive monotony of the wards to the rushed schedule and ear-splitting din of the big barn-like dining-room, he'd move through portions of the seemingly endless tunnels that honeycomb the place.

Even on a mere tour of Ionia, an official Medical Audit Committee reported after a 1965 study, "one begins to feel somewhat like a mole."

Because of a shortage of both linens and clothing, the lieutenant would have been allowed to take just one shower a week, or two showers if he performed manual labor. To add to the smell of sweat in his crowded ward at night, he'd have been forced to use what is politely termed a "chamber pot," for which no cover was provided.

All of which, as the Audit Committee noted, "results in quite an odorous situation . . . since ventilation is a problem in some areas."

Still, the lieutenant would have found the most unbearable aspect of his confinement to be sheer monotony. "The absolutely apathetic, empty existence that these men lead on the wards and the groping efforts which they follow to busy themselves with nothing is terrible to behold," the Audit Committee reported. And the House Men-

---

The author, Representative Roy Smith, of Ypsilanti, has been chairman of a special committee of the Michigan House of Representatives to study mental health legislation for criminal cases. Representative Smith, a graduate of the University of Michigan and a former Ypsilanti Township supervisor, was first elected to the Michigan House in 1966.

tal Health Committee, conducting its own study, concluded that "Hopelessness is more apparent than treatment."

IT IS NOT MY PURPOSE to condemn Ionia State Hospital, where conditions have been improved in the last two years, and which is in the process of being phased out as a special institution for the criminally insane anyway. Conditions would have been far more unbearable in 1965, the Audit Committee noted, except for the constant and determined efforts of a number of dedicated staff members.

Moreover, the place where Michigan has been confining its criminally insane was no worse than St. Elizabeth's in the District of Columbia or Matteawan in New York State, and all three are better than most such institutions in this nation. As one professor of psychiatry, Dr. Emanuel Tanay of Wayne State University, writes me, "The hospitals for the criminally insane across the country are neither hospitals nor jails, but combine the worst of both!"

This nation spends an average of $6.30 a day on inmates of its public mental institutions — in an era when any semblance of true psychiatric care in a private hospital runs at least $50 a day. As a result, according to one nationally-known legal expert, Professor B. J. George, Jr. of the University of Michigan, confinement in such institutions "is difficult to distinguish from penitentiary imprisonment, except that the penitentiary is likely to offer more rehabilitation services than the mental institution!"

IN LIGHT OF THIS, and in light of the fact that the special institutions for the criminally insane have almost invariably been the oldest, most remote, and least desirable of our mental hospitals, can we really go on pretending that we are relieving the insane of criminal responsibility, that we are allowing the "madman" who is charged with a crime to be punished by his madness alone?

AUTHOR
REP. ROY SMITH

Most often, we deny such persons their day in court by ruling them "mentally incompetent to stand trial." In other cases, we grant them a trial and find them "not guilty by reason of insanity" — a verdict that has the practical effect of meaning "guilty and insane." The end product of both procedures is that we punish the "madman" doubly — by confining him indefinitely rather than for a specified term, and by confining him in a place that is generally no better than prison and is frequently worse. Then we doubly damn him by branding him "criminally insane!"

Most of the patients of Ionia, and at New York's Matteawan and other such institutions were committed as "incompetent to stand trial" — which means their confinement resulted neither from having been convicted of a crime nor having been ruled insane in the formal hearing of a civil commitment procedure. In other words, it would be no exaggeration to say that most of our so-called "criminally insane" have not formally been ruled either criminal or insane by any semblance of due process of law.

Dr. Ames Robey, who heads Michigan's new Center for Forensic Psychiatry, has made an extensive study of the question of incompetency and has asserted, in the *American Journal of Psychiatry,* that the widespread misuse of this procedure "represents the grossest violation of an individual's rights." Yet if past precedence is any guide, as another study, made at Ionia, summarized its statistics in the same *Journal,* "well over half the individuals committed as incompetent to stand trial will spend the rest of their lives confined!"

I ASK AGAIN, CAN WE really claim the "madman" we charge with a crime is being punished by his madness alone? Since 1939, we have had, in Michigan, a law I hope to see repealed in the current Legislative session — a "criminal sexual psychopath" statute providing for the commitment of certain persons charged with or convicted of sex crimes. In examining the workings of this law, a Governor's study commission discovered that, as a rule, the major and violent sex offenders were being sent to prison while the minor or nuisance offenders were being committed to a mental institution. Yet the same study showed that the sex criminal imprisoned at Jackson was twice as likely to be paroled, within any given number of years, as the offender committed to Ionia!

I make no claim to either legal or psychiatric expertise. But to my layman's mind, we have a "gray area" in our system of justice — a zone where our courtroom procedures are not really criminal or civil in nature, where confined persons are not really patients or prisoners, and where places of confinement, as Dr. Tanay put it, "are neither hospitals nor jails." And in my layman's opinion, this gray area exists only because we are stubbornly refusing to face up to one very basic question:

HOW, IF INSANITY RENDERS a person not guilty of crime, can anyone possibly be "criminally insane?"

The word "insanity" has no real medical meaning. Psychiatrists refer to it as "a vague legal term for mental illness." Courts define it only by means of statutory "tests." Originally, for example, there was the old English M'Naghten Rule: Did the accused know right from wrong? At present, the Durham Rule is used in some jurisdictions: Was the crime a "product" of mental illness? Still another test, recently proposed for Michigan, read as follows: Was the accused, at the time he acted, incapable, by reason of mental disorder or defect, of conforming his conduct to the requirements of the law?

Such semantic gymnastics could be performed indefinitely. But Dr. Alexander Dukay, who heads Ypsilanti State Hospital, has expressed doubts to me that any statutory test for substantive insanity will ever really prove satisfactory. All such tests ask a question that can seldom really be answered yes or no. In actual practice, in fact, the question is usually answered both ways; both the defense and the prosecution generally manage to find psychiatrists to support their respective arguments.

The very concept of a legal test for insanity in a criminal case, it seems to me, is based upon the highly questionable assumption that we can invariably draw a line between a non-responsible group for whom commitment is indicated, and a blackhearted bunch who deserve to go to prison.

Even if we were living up to that assumption by providing the insane with conditions of confinement far preferable to those offered convicts — and we are not — the assumption would still be highly questionable. I think I can safely assert that even the most hopelessly psychotic person generally retains some measure of volition or choice. And after discussions with such experts as Dr. Andrew Watson, who has the rare distinction of being a professor of both psychiatry and law at the University of Michigan, I feel similarly secure in asserting that most criminal acts are at least partially the product of some degree of mental disability. The sharp, clear dividing line demanded by the statutory tests for substantive insanity simply doesn't exist.

I THINK MICHIGAN HAS moved far ahead of most states toward recognizing this fact. In addition to initiating the phasing out of Ionia as a special institution for the criminally insane, the 1966 Legislature made many statutory gains — including a new law covering mental incompetence that probably provides more safeguards than any other in the nation today.

I hope the present year will see Michigan making a definite beginning on the construction of a proposed new "twin" facility, where the departments of Mental Health and Corrections can work cooperatively and yet in their separate fields of expertise, providing competent treatment in a setting of secure custody for both mentally ill convicts and mental patients who present security problems.

The day when psychiatric treatment will be regarded as a major and indispensable part of prison rehabilitation efforts, with adequate financial support, may be far in the future. I do not propose, no matter how extensive past abuses have been, that we can eliminate the major commitment procedures that occur in our criminal courts — incompetency-to-stand-trial rulings, and not-guilty-by-reason-of-insanity verdicts.

I do suggest, however, that the time has come for us to recognize clearly that our public mental hospitals are medical and not custodial institutions, that the very dedicated psychiatrists who staff them are doctors and not wardens, and that we have no right to make them responsible for the confinement of any individual except for the purpose of providing care and treatment. In other words, we must stop burdening our Department of Mental Health with persons who are more properly subjects for conventional criminal sentencing.

WITH THE ADVANCES made in 1966, Michigan has reached the point where the entire contradictory concept of the so-called "criminally insane," including such resulting designations as "criminal sexual psychopath," can be erased from the lawbooks and the language alike, and patients in our mental hospitals can be regarded solely as sick people, without criminal stigma to discourage recovery. If repeal of the outdated criminal sexual psychopath act can be achieved this year, in fact, the remaining task will be more one of education and adequate financing than statutory change.

Only when we stop looking upon our mental institutions as an auxiliary prison system can we really claim to be relieving the insane of criminal responsibility. Both the laws and the living conditions with which we have been doubly punishing "madmen" are the products of our pretensions. I urge only that we discard those pretensions.

YOUR DISABILITY INCOME PLAN IS NOW A BETTER BUY THAN EVER!

INCREASED INDEMNITY

You can now purchase a monthly benefit of up to $1,000. (The former limit was $500.) If you also have additional coverage, Provident will participate in total coverage providing up to $2,500 a month in benefits. These limits are subject to 55 percent of earnings. And remember, your disability income benefit is tax free.

CONVERSION GUARANTEE

You have a conversion guarantee in case the plan is terminated or in case you move your practice outside Michigan. You can convert to an individual policy, providing exactly the same coverage and benefit, and guaranteed continuable to age 70.

EXTENDED BENEFITS

If you are currently insured and your sickness benefits are payable to age 65, your sickness benefit is automatically extended to lifetime payments for sickness disability beginning prior to age 50.

ABBREVIATED MONTHLY BENEFIT AND ANNUAL PREMIUM SCHEDULE

Attained Age on Effective Date & Renewal Ins.	Monthly Indemnity	Lifetime Accident 5 Years Sickness (L-5 Plan)	Lifetime Accident Sickness to Age 65 (L-65 Plan)
Thru 33	$500	$ 63.50	$ 88.50
Cost for each additional Monthly Indemnity	$100	11.90	16.90
34 - 49	500	151.70	201.70
Cost for each additional Monthly Indemnity	$100	28.70	38.70
50 - 65	500	214.60	264.60
Cost for each additional Monthly Indemnity	$100	41.20	51.20
60 - 65	500	214.60	214.60*
Cost for each additional Monthly Indemnity	$100	41.20	41.20*

* Renewal Only

Semi-annual premiums are one-half the amounts shown above

Nixon's Views on Medical Issues

Richard M. Nixon will take over as President pledged to oppose national compulsory health insurance and federal control of physicians' fees. Highlights of his position on health care issues: —

FEDERAL ROLE IN MEDICINE

The role of the federal government in medicine should be supportive, never dominating. It should serve as a catalyst and supplement private efforts only as needed.

MEDICARE

Although the program has been plagued by financial and administrative problems, it offers good potential if wisely administered.

Medicare must provide needed services at the lowest possible cost. The program could be endangered by a continuing escalation of costs.

More effort is needed to reduce dependence on costly hospitalization through better use of extended care facilities and increased use of outpatient care. Also needed is a re-examination of reimbursement formulas and experimentation with financial incentives to assure that the program encourages efficiency at all levels.

MEDICAID

I favor the basic philosophy of medicaid — that of helping medical indigents who need aid to meet medical expenses. Unfortunately, the program has fallen short of its expectations . . . .

What is needed is a careful reassessment of medicaid, especially at the local level, with full professional guidance, and emphasis on advice from physicians. There also is a need for simplification of literature and application forms.

NATIONAL COMPULSORY HEALTH INSURANCE

I oppose a national compulsory health insurance program because I do not want to lower the quality of medical care in the United States. Also, new health programs should be geared only to persons in need . . . .

I want to see that every individual who needs medical care is able to get it. But I want it to be good medical care. That's why I want to keep the doctors free from government control as much as possible and oppose extension to a national compulsory health insurance program for everyone.

COMPULSORY AREAWIDE HEALTH PLANNING

I oppose compulsory areawide health planning. We can't assure communities better health planning just by making such groups compulsory. Areawide planning should be left to state and local determination.

FEDERAL CONTROL OF PHYSICIAN'S FEES

I oppose federal control of physicians' fees. Our system is an open, competitive market, assuring an individual the prerogative of setting a value on the services he performs. I would be as opposed to infringing on this right by regulation of physicians' fees as I would be to regulating fees charged by the members of any other profession.

DEPARTMENT OF HEALTH

As President, I intend to establish a Commission on Government Reorganization to study thoroughly ways of increasing efficiency in government organization as well as making it more responsive to the people.

MENTAL HEALTH

We must develop new methods of treating the mentally ill . . . .

TAX DEDUCTIONS FOR THE AGED

The 100 percent income tax deduction for nonreimbursable drug and medical expenses of those over 65 should be restored.

PREVENTIVE MEDICINE

Preventive medicine is, in my judgment, both an opportunity and a major challenge to medicine.

Automated mass screening programs would seem to have great possibilities even though they are generally still in their infancy and therefore cannot yet be gauged concerning their effectiveness in preventing chronic illness and reducing deaths. Information about these programs is still inadequate to warrant a broad federal program.

HILL-BURTON ACT

As demand for hospital facilities increases, additional funds under the Hill-Burton Act for construction and modernization of such facilities will be required to supplement state and local efforts.

To assure the most efficient use and distribution of Hill-Burton funds, a proposal for bloc grants in this area should be considered.

ABORTION LAWS

Nothing should be done on the federal level. The abortion laws should be considered by each state, and should be acted upon by each state, depending upon the opinion in that state . . . . I do not think that a nationally-imposed law would be one which would be accepted in many parts of the country, and only when a state — a majority of people of the state — reach a conclusion that they want that kind of legislation, as they did in Colorado and as they may in the state of New York, should such a law be passed or considered.

SIDE EFFECT

A drug is a substance which, if injected into an animal, produces a paper.

—Otto Loewi, Ph.D., *quoted in IBM Think*

IRON MOUNTAIN SALUTES NATIVE ON COLUMBIA STAFF

William B. Seaman, M.D., chairman of the radiology department of the Columbia University College of Physicians and Surgeons, recently returned to his home town of Iron Mountain for a "Native Son Appreciation Day" celebration in his honor.

Three local doctors were speakers at the dinner program sponsored by the Rotary Club and attended by several hundred citizens of Iron Mountain. John Newkirk, M.D., W. H. Huron, M.D., and Donald Anderson, M.D., described Dr. Seaman's early life and professional career.

Midwest Health Care Conference Proposes Many Suggestions

BY VERNON V. BASS, M.D.,
SAGINAW, VICE-SPEAKER OF
MSMS HOUSE OF DELEGATES

The recent midwest Conference on Health Care offered a number of suggestions which might prove helpful to medicine, hospitals, business, government and other segments concerned with the subject.

The Secretary of HEW sponsored a Regional Conference on Health Care Costs recently in Cleveland. Twenty-four representatives of the medical professions, hospitals, insurance, labor, nursing, and public health attended from Michigan.

Many of the comments are worth reporting and interpreting for MSMS members; and it must be recognized that such possible articles could take many different approaches.

HEW Secretary Cohen set the tempo for the conference with this quotation:

"The Conference has been designed to bring together the leaders of the health community and the insurance industry, consumers and purchasers, (both government and private) to approach the problem of rising health care costs through the stimulation of experiments and innovations in the organization and delivery of health care services, as they relate to state and local communities."

THE OPENING ADDRESS by George Bugbee, director, Center for Health Administration Studies, University of Chicago, who expressed serious concern about rising costs, technological changes, inflation, hospital payrolls, MDs fees, and a hope for innovative ideas at the local community to halt rising costs.

Arthur E. Hess, Deputy Commissioner, Social Security Administration, then described problems "to promote and emphasize voluntary effort and action." He said, "local control often means no control and no planning." He asked the participants to "explore the public and private policy of providing health care so that the consumer can get dollar value." He emphasized the importance of health care delivery and "the judicious combination of peer groups and incentive formulas and methods to provide better efficiency in the delivery of health care."

The conference participants met in discussion groups and then presented observations and recommendations.

Representing MSMS at the Midwest Conference were Vernon V. Bass, M.D., Saginaw, Vice-Speaker, MSMS House of Delegates; Robert E. Rice, M.D., Greenville, Chairman, MSMS Committee on Rural Medical Services, and also Herbert Mehler, of the MSMS Staff.

THERE WAS CONSIDERABLE discussion about hospital costs. It was recognized that "with about 75% of hospital cost going for personnel, how real is the cost control that the physician can exert?"

The most effective system of cost control, it was suggested, will come through a partnership effort, whereby the board, the administration, the medical staff, and other staff are collaboratively engaged in reaching the dual objectives of (1) quality service to the patient, and (2) control of costs. Cost control is achieved by a variety of means, such as non-duplication of expensive equipment, fullest possible use of facilities, wise deployment of personnel, rendering of services by the most efficient means, etc.

As a means to achieve this partnership effort, it was proposed that:

a. Physicians serve on the governing boards of hospitals with the same privileges as other board members;
b. Hospital medical staffs be given the opportunity to select their representatives to the board, be careful in the selection, and see that there is provision for continuity on the board;
c. Opportunities be provided whereby administration and medical staff, and other staff, get together to explore and work out more effective ways to achieve common objectives, especially the objective of quality patient care coupled with cost control.

But please don't forget this:

Contraindications: Edema; danger of cardiac decompensation; history or symptoms of peptic ulcer; renal, hepatic or cardiac damage; history of drug allergy; history of blood dyscrasia. The drug should not be given when the patient is senile or when other potent drugs are given concurrently. Large doses of the alka formulation are contraindicated in glaucoma.

Warning: If coumarin-type anticoagulants are given simultaneously, watch for excessive increase in prothrombin time. Instances of severe bleeding have occurred. Persistent or severe dyspepsia may indicate peptic ulcer; perform upper gastrointestinal x-ray diagnostic tests if drug is continued. Pyrazole compounds may potentiate the pharmacologic action of sulfonylurea, sulfonamide-type agents and insulin. Carefully observe patients receiving such therapy. Use with caution in the first trimester of pregnancy and in patients with thyroid disease.

Precautions: Before prescribing, carefully select patients, avoiding those responsive to routine measures as well as contraindicated patients. Obtain a detailed history and a complete physical and laboratory examination, including a blood count. Patients should not exceed recommended dosage, should be closely supervised and should be warned to discontinue the drug and report immediately if fever, sore throat, or mouth lesions (symptoms of blood dyscrasia); sudden weight gain (water retention); skin reactions; black or tarry stools or other evidence of intestinal hemorrhage occur. Make complete blood counts at weekly intervals during early therapy and at 2-week intervals thereafter. Discontinue the drug immediately and institute countermeasures if the white count changes significantly, granulocytes decrease, or immature forms appear. Use greater care in the elderly and in hypertensives.

Adverse Reactions: The more common are nausea and edema. Swelling of the ankles or face may be minimized by withholding dietary salt, reduction in dosage or use of diuretics. In elderly patients and in those with hypertension the drug should be discontinued with the appearance of edema. The drug has been associated with peptic ulcer and may reactivate a latent peptic ulcer. The patient should be instructed to take doses immediately before or after meals or with milk to minimize gastric upset. Drug rash occasionally occurs. If it does, promptly discontinue the drug. Agranulocytosis, exfoliative dermatitis, Stevens-Johnson syndrome, Lyell's syndrome (toxic necrotizing epidermolysis), or a generalized allergic reaction similar to serum sickness may occur and require permanent withdrawal of medication. Agranulocytosis can occur suddenly in spite of regular, repeated normal white counts. Stomatitis, salivary gland enlargement, vomiting, vertigo and languor may occur. Leukemia and leukemoid reactions have been reported. While not definitely attributable to the drug, a causal relationship cannot be excluded. Thrombocytopenic purpura and aplastic anemia may occur. Confusional states, agitation, headache, blurred vision, optic neuritis and transient hearing loss have been reported, as have hyperglycemia, hepatitis, jaundice, hypersensitivity angiitis, pericarditis and several cases of anuria and hematuria. With long-term use, reversible thyroid hyperplasia may occur infrequently. Moderate lowering of the red cell count due to hemodilution may occur.

Dosage in Painful Shoulder: Initial: 3 to 6 capsules daily in 3 or 4 equal doses. Trial period: 1 week. Maintenance dosage should not exceed 4 capsules daily; response is often achieved with 1 or 2 capsules daily.

In selecting the appropriate dosage in any specific case, consideration should be given to the patient's weight, general health, age and any other factors influencing drug response.

When it's more than a bad cold

your patient can feel better while he's getting better

Achrocidin®

Tetracycline HCl—Antihistamine—Analgesic Compound

Each tablet contains: ACHROMYCIN® Tetracycline HCl 125 mg.; Phenacetin 120 mg.; Caffeine 30 mg.; Salicylamide 150 mg.; Chlorothen citrate 25 mg.

In tetracycline-sensitive bacterial infection complicating respiratory allergy, ACHROCIDIN brings the treatment together in a single prescription—prompt relief of headache and congestion together with effective control of the organisms frequently responsible for complications leading to prolonged disability in the susceptible patient.

For children and elderly patients you may prefer caffeine-free ACHROCIDIN Syrup. Each 5 cc contains: ACHROMYCIN (Tetracycline) equivalent to Tetracycline HCl 125 mg.; Phenacetin 120 mg.; Salicylamide 150 mg.; Ascorbic Acid (C) 25 mg.; Pyrilamine Maleate 15 mg.

Contraindications: Hypersensitivity to any component.

Warning: In renal impairment, since liver toxicity is possible, lower doses are indicated; during prolonged therapy consider serum level determinations. Photodynamic reaction to sunlight may occur in hypersensitive persons. Photosensitive individuals should avoid exposure; discontinue treatment if skin discomfort occurs.

Precautions: Drowsiness, anorexia, slight gastric distress can occur. In excessive drowsiness, consider longer dosage intervals. Persons on full dosage should not operate vehicles. Nonsusceptible organisms may overgrow; treat superinfection appropriately. Treat beta-hemolytic streptococcal infections at least 10 days to help prevent rheumatic fever or acute glomerulonephritis. Tetracycline may form a stable calcium complex in bone-forming tissue and may cause dental staining during tooth development (last half of pregnancy, neonatal period, infancy, early childhood).

Adverse Reactions: *Gastrointestinal*—anorexia, nausea, vomiting, diarrhea, stomatitis, glossitis, enterocolitis, pruritus ani. *Skin*—maculopapular and erythematous rashes; exfoliative dermatitis; photosensitivity; onycholysis, nail discoloration. *Kidney*—dose-related rise in BUN. *Hypersensitivity* reactions—urticaria, angioneurotic edema, anaphylaxis. *Intracranial*—bulging fontanels in young infants. *Teeth*—yellow-brown staining; enamel hypoplasia. *Blood*—anemia, thrombocytopenic purpura, neutropenia, eosinophilia. *Liver*—cholestasis at high dosage.

Upon adverse reaction, stop medication and treat appropriately.

Lederle

350-8

MIDWEST HEALTH CONFERENCE/Continued

Many, many needs were expressed in the reports from the discussion group. These included:

1. Simplify paper work in Medicare-Medicaid
2. Use medical students in doctors' offices
3. Education of consumer to conserve health
4. Medical schools should provide medical economic courses for medical doctors
5. More use in ECF's of home care services
6. Improve productivity through better management
7. Commercial carriers should have more rapport with medical societies
8. Funding to facilitate use of more medical advertising and marketing to advise people of available health services
9. Improve recordkeeping — need for data banks
10. Centralization of emergency and weekend services
11. More use of lower level para-medical personnel
12. Further standardization of nomenclature and coding
13. Education of the consumer to keep costs down
14. Education of consumer that medical care is not free
15. Immediate expansion of medical schools
16. More use of para-medical personnel before MD sees patient

Many materials were distributed to the conference participants. Copies are available for interested MSMS members who write MSMS, 120 West Saginaw, East Lansing 48823, for any of the following:

The following material is available on request:

1. "A Health Screening Program for the Inner City: — Flanner House of Indianapolis
2. "Community Health Foundations" — Cleveland, Ohio
3. "Controlled Charges, Reimbursement and Hospital Costs" — Indiana Hospital Association, Indianapolis, Indiana
4. "Expanding Community Hospital Services: Progressive Patient Care" — presented by Robert DeVries, McPherson Community Health Center, Howell, Mich.
5. "Illinois Study Committee on Nursing (ISCON)"
6. "Comparable Costs and Economic Feasibility of the Illinois Zone Mental Health Program" — Illinois Department of Mental Health
7. "Responsibilities of Private Insurer for Experimentation with Methods of Providing Health Care" — Nationwide Insurance Company, Columbus, Ohio
8. "San Joaquin Foundation for Medical Care Prepayment Pilot Project"
9. "Selected Activities of the Chicago Hospital Council Relating to Quality of Care and Cost of Care," Chicago Hospital Council.
10. "Shared Computer Program," Mt. Sinai Hospital, Milwaukee, Wisconsin.

BOOKLETS SUGGESTED TO HELP PLAN HEALTH EDUCATION EFFORTS

Public Affairs Committee booklets on many social and health problems are available to help physicians and county medical societies develop projects, speeches, TV and radio programs, etc., in many areas of current concern.

The Public Affairs Committee is a nonpartisan, non-profit organization in New York, which was founded in 1935 "to help educate the American public on vital economic and social problems."

A note to the Committee can request a copy of their current catalog, or can help interested physicians obtain specific booklets for 25 cents each.

SMOKING-HEALTH

"Smoking, the Great Dilemma," pamphlet no. 361.

"It's Not Too Late to Stop Smoking Cigarettes," no. 386.

"Cigarettes and Health," no. 220A.

SEX EDUCATION

"How to Tell Your Child About Sex," no. 149.

"Sex and Our Society," no. 366.

OTHER TOPICS

"The Negro in America," no. 95.

"The Delinquent and the Law," no. 337.

"What We Can Do About Drug Abuse," no. 390.

"Fads, Myths, Quacks — and Your Health," no. 415.

Mailing address for the Public Affairs Committee is 381 Park Avenue, South; New York, New York 10016.

> "No physician insofar as he is a physician, considers his own good in what he prescribes, but the good of his patients; for a true physician is also a ruler having the human body as a subject, and is not a mere money maker."

Michigan Pharmacy Spokesman Asks His Members, "What's Ahead?"

BY ROBERT C. JOHNSON
EXECUTIVE DIRECTOR
MICHIGAN STATE PHARMACEUTICAL ASSOCIATION
REPRINTED FROM MICHIGAN PHARMACY JOURNAL

We are just four days away from completing another fiscal year, the 85th in the Association's history.

How many of these previous eighty-five years were fraught with critical problems that confronted the profession, I do not know. One thing I am certain of is that the problems and challenges that face us will not diminish in the future. If anything, we can expect an even greater test of our profession's strength and ability in the years ahead.

All too many pharmacists continue to have the opinion that they can go it alone — they do not recognize that the conditions which exist in society today are of such magnitude that no individual can possibly cope with all of them.

IF PHARMACY HAD no professional society to represent it, certainly, one would have to be created today.

Government, for example, would not take the time to consult with each individual pharmacist relative to any program that it intended to initiate — but government will listen to a representative body of the profession. Granted, they may not accept every request or recommendation that the association may propose, but, nevertheless, they will listen and, certainly, it has been our experience that many of our proposals have been acceptable.

Try to think for a moment what the practice of pharmacy might be today if there had been no association to speak in its behalf. Would pharmacy as a profession even exist today?

Pharmacy, even with representation, has been, to a considerable extent, a captive profession — captive of the physicians and captive of the pharmaceutical manufacturers. The right to exercise true professional judgment has been impinged since the demise of the era of compounding. Instead, the pharmacist has been compelled to dispense the manufacturer's brand name of a drug as written by a physician. This has left little opportunity for the pharmacist to utilize his highly skilled professional training.

Pharmacists are growing tired of this captivity — and properly so.

PHARMACISTS ARE beginning to ask

— *With my education, why shouldn't I be playing a more responsible role on the health team?*

— *Why shouldn't I be determining the patient's medication regimen?*

— *With my knowledge of drugs, why shouldn't I be determining the drug or brand of drug that should be prescribed?*

— *Am I not in a position to relieve the physician of certain of his responsibilities that he is finding less time to assume?*

These same questions are beginning to be asked by even those outside of pharmacy. With the changing patterns of health care that are developing, government officials, as well as those more enlightened members of other health professions, are wondering why the pharmacist is not performing certain functions that he is trained for but, because of tradition, are still being performed by the physician.

THESE QUESTIONS MUST BE answered and let me assure you that your professional associations, both APhA and MSPA, are directing their attention to these matters with the hope of finding the solution in the very near future.

All informed individuals will admit that the delivery of health care in this country leaves something to be desired.

Certainly, we do not want to develop a completely socialized system that would deprive the citizen of his right to select his health care providers. At the same time, we want to recognize that health care is not a privilege but a *right* to which everyone is entitled.

As pharmacists and responsible health professionals, we must seek ways by which we can better

Editor's Note:

Today medicine is being buffeted on all sides by experts in the field of medical care. In spite of all the experts, the individual care of patients remains the responsibility only of the physician, on a legal, moral and ethical basis. The very basis of medical care is that of therapeusis (the patient does not care much about diagnosis but is most interested in cure). We wonder if the views expressed by Mr. Johnson represent those of the pharmaceutical profession and how they affect a relationship based on years of progress together. The italicized words are mine and not the author's.—John W. Moses, M.D.

deliver our services to the patient and better serve the total health needs of a community — making certain that every citizen is properly cared for.

COMMUNITY PARTICIPATION NEEDED

For any pharmacist to say that he does not have time to participate in community health programs is an admission that he is shirking his responsibility to society.

For years we have been talking about our individual responsibility to the profession which by now, I trust, is well accepted by everyone. I think *now* is the time we must place our emphasis on our responsibility to society.

Society has provided us with our education and with the opportunity to practice our profession. We then must return to society all that we can possibly give to provide a better, healthier environment in which to live.

Certainly, this is a sick world — one that needs the attention of those who can heal — heal by virtue of treating illness as well as conditions.

With crime and violence in our streets, assassination of our leaders, rejection of law and order, abuse of drugs and other maladies, we must turn to those who can heal and seek their help. Is not the pharmacist one who can be turned to? Is he not often the one looked up to in his community?

IT WOULD SEEM THAT the pharmacist, as a respected member of his community, could — if he would — influence in some way the conditions that exist surrounding his place of practice.

If he would become more involved with the youth of his area, trying to understand their problems and reasons for unrest, he might be able to help them find their rightful place in society.

In addition to treating the physical ills of mankind, we must also treat the social ills, for often one is dependent on the other.

Couldn't the pharmacist organize a group in his community that could direct their attention to improving the community, assisting those who need help both physically and materially?

Just in the health area, pharmacists could perform valuable services helping to educate the young about drug abuse, venereal disease, alcoholism, malnutrition and the ways to overcome these problems.

Greater emphasis must be directed toward preventive medicine — and here, certainly, the pharmacist can play an important role.

All too often, pharmacists' only concern about OEO centers and other government sponsored programs is with the prescriptions or possible loss thereof. There is, however, more to consider than the mere dispensation of the prescription. Unless we consider these other responsibilities, there may be little opportunity to ensure the use of private practice in rendering pharmaceutical care.

WE HAVE TALKED ABOUT the pharmacy being a health information center — but we must do more than that. Those who most require health information are not likely the ones to seek it — instead, they must be sought out. The pharmacist cannot do this unless he leaves the comfort of his prescription department and goes out into the streets to examine the conditions and find those who need care. He must then see that they receive proper medical attention.

These are the things we are talking about when we speak of comprehensive health care. If we reject government providing such care through OEO centers, etc., then we, as responsible citizens and health professionals, must substitute in its place our own time and interest.

Perhaps if we treat the physical ills of our society, the social ills will become lessened.

PHARMACISTS OF THE FUTURE

This leads us to a consideration of the future role of the pharmacist. For anyone who thinks we can preserve the status quo — I am afraid he, like Rip Van Winkle, has been asleep for all too many years.

Society is changing — and changing rapidly. Unless we change along with it, we will be left so far behind that our contemporaries will soon forget who we were.

Some pharmacists reject the theories proposed by Dr. Goddard and others who maintain that the pharmacy of tomorrow will be somewhat different from today.

It is an exciting experience to live through a revolution, but it is a regretful experience to live through one and not know it is taking place.

I am afraid all too many pharmacists are suffering through a regretful experience. They do not see the changes that are taking place — because it is easier not to.

As long as there are prescriptions to be dispensed and money is coming in, it is easier to not concern ourselves with how much longer this will last.

THERE ARE THOSE, however, who do recognize that the pharmacist of the future, because of the pressures of society and the ever-changing world, will be practicing his profession within the next two or three decades in a different manner than he is today. At this time, I am participating, along with eleven others from across the nation, in a study designed to determine the future "pharmacist." This research project will consider his educational experience, his environment, and his professional responsibilities.

I am not certain of what the pharmacist of the future will be, but I do know he will resemble something different from what he is today.

There have been enough significant changes in the delivery of pharmacy care in this past decade to convince me that this is only the beginning. We are only on the threshold of finding what our future role will be and how it will be performed.

THINK ALONG WITH ME, if you will,
— about the impact that prefabricated medicine has had on our profession —

— about the changes in our educational requirements —

— about the involvement of government in our profession —

— about the degree of specialization and sophistication in medical care.

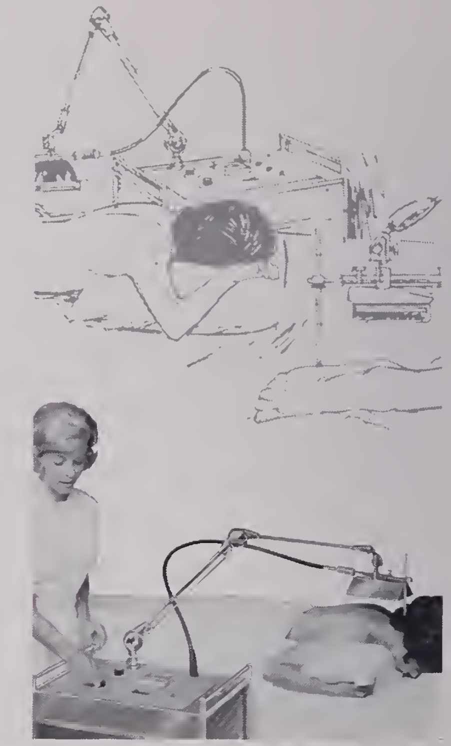
In how short a span has this occurred? Then tell me if we are not witnessing a resolution in the concepts and delivery of health care.

Can you envision the future? I can't entirely, but I have some ideas. I would be interested in your thoughts. If we can think about the change that is occurring and plan for it, it might be more palatable and easier to accept.

Again, we need to recognize that as individuals, survival will be difficult. But as one aggregate working through a strong, progressive professional association, we can not only survive but become strengthened and perhaps even more useful to our society.

So long as I have the privilege of serving you, I will work toward this end.

With your support and the support that you can engender from others, I am confident we will have a bright future.



Effective yet simple to operate

Burdick's smartly styled MW-200 Microwave Diathermy affords effective deep tissue* heating — conveniently and quickly. **Features:** Simplicity of operation / Ease of director placement / Counterbalanced fully adjustable arm / Flexible coaxial cable / Single power control with automatic timer / Easy mobility / Modern styling / Quality-engineered for years of dependable service.

Liberal trade-ins are now being offered by your Burdick dealer. Take a good look at your present diathermy equipment.

*Up to 7.81° F. at a depth of 5 cms.

AMA Invites You . .

MSMS members, when they are in Chicago, are cordially invited to visit the AMA Headquarters at 535 N. Dearborn.

Last year, nearly 900 persons toured the AMA building. The AMA extends a warm welcome to all physicians, their wives and guests to take a 40-minute tour to become better acquainted with the AMA's organizational structure, its major areas of activity and some of the numerous services available to physicians, as well as the public. Tours are given between 9:00 a.m. and 4:00 p.m., Monday through Friday.

AMA Officers:

President: Dwight L. Wilbur, M.D., San Francisco

President-Elect: Gerald D. Dorman, M.D., New York

Immediate Past President: Milford O. Rouse, M.D., Dallas

Vice-President: Carl A. Lincke, M.D., Carrollton, Ohio

Secretary-Treasurer: Alvin J. Ingram, M.D., Memphis

Speaker, House of Delegates: Walter C. Bornemeier, M.D., Chicago

Vice Speaker: Russell B. Roth, M.D., Erie, Pa.

Chairman, Board of Trustees: Burtis E. Montgomery, M.D., Harrisburg, Ill.

Woman's Auxiliary to AMA:

President: Mrs. C. C. Long, 707 W. Main, Ozark, Arkansas 72949

PLAINWELL SANITARIUM, INC.

Plainwell, Michigan — MU 5-8441

Edwin M. Williamson, M.D.
M. Leroy Barry, M.D.

Dan W. Everett, M.D.
Wilbur R. King, Ph.D.

The Plainwell Sanitarium is a private psychiatric hospital licensed by the Michigan Department of Mental Health, and member of the American Hospital Association, Michigan Hospital Association, and National Association of Private Psychiatric Hospitals. Our extensive diagnostic treatment services include the following:

- Organic and psychological therapy for the psychiatrically and emotionally disturbed of all ages.
- Diagnostic evaluation of neurological disorders.
- Rehabilitative services for geriatric and convalescent patients.
- Medico-Legal counsel.
- Diagnostic and psychological evaluation and hospitalization, if indicated, of juveniles for Probate and Juvenile Courts.

National Report Suggests Ways "to Save the Cities"

What future do the cities in Michigan and the nation face?

Every MSMS member is concerned with this question and many physicians are working actively on city councils, school boards, zoning agencies, planning commissions and other official bodies to help seek solutions.

The Report of the National Advisory Commission on Civil Disorders evaluates problems and possible courses of action. Following are some direct quotations to help MSMS better understand changing conditions and the recommended steps toward solutions.

THE REPORT CONTENDS that "the only possible choice for America to save the cities is to pursue integration by combining ghetto enrichment with policies which will encourage Negro movement out of central city areas."

"By 1985, the Negro population in central cities is expected to increase by 72 percent to approximately 20.8 million. Coupled with the continued exodus of white families to the suburbs, this growth will produce majority Negro populations in many of the nation's largest cities.

"The future of these cities, and of their burgeoning Negro populations, is grim. Most new employment opportunities are being created in suburbs and outlying areas. This trend will continue unless important changes in public policy are made.

"In prospect, therefore, is further deterioration of already inadequate municipal tax bases in the face of increasing demands for public services, and continuing unemployment and poverty among the urban Negro population.

"Development of a racially integrated society, extraordinarily difficult today, will be virtually impossible when the present black ghetto population of 12.5 million has grown to almost 21 million.

"To continue present policies is to make permanent the division of our country into two societies; one, largely Negro and poor, located in the central

(Continued on 1534)

Many Conditions Involving Negroes "In State of Crisis" Says Report

"Many facts and statistics about the Negroes are contained in the Report of the National Advisory Commission on Civil Disorders, and some of them are repeated below:

"Throughout the 20th Century the Negro population of the United States has been moving steadily from rural areas to urban and from South to North and West. In 1910, 91 percent of the nation's 9.8 million Negroes lived in the South and only 27 percent of American Negroes lived in cities of 2,500 persons or more. Between 1910 and 1966 the total Negro population more than doubled, reaching 21.5 million, and the number living in metropolitan areas rose more than five-fold (from 2.6 million to 14.8 million). The number outside the South rose eleven fold (from 880,000 to 9.7 million).

"Although there have been gains in Negro income nationally, and a decline in the number of Negroes below the "poverty level," the condition of Negroes in the central city remains in a state of crisis. Between 2 and 2.5 million Negroes — 16 to 20 percent of the total Negro population of all central cities — live in squalor and deprivation in ghetto neighborhoods.

"Negro men are more than three times as likely as white men to be in low paying, unskilled or service jobs. This concentration of male Negro

when the diagnosis is depression

ELAVIL® HCl
(AMITRIPTYLINE HCl | MSD)

Indications: Mental depression and mild anxiety accompanying depression.

Contraindications: Glaucoma and predisposition to urinary retention. Not recommended in pregnancy.

Precautions and Side Effects: Drowsiness may occur within the first few days of therapy. Patients should be warned against driving a car or operating machinery or appliances requiring alert attention. When depression is accompanied by anxiety or agitation too severe to be controlled by ELAVIL HCl alone, a phenothiazine tranquilizer may be given concomitantly. Suicide is always a possibility in mental depression and may remain until significant remission occurs. Supervise patients closely in case they may require hospitalization or concomitant electroshock therapy. Untoward reactions have been reported after the combined use of antidepressant agents having varying modes of activity. Accordingly, consider possibility of potentiation in combined use of antidepressants. Monoamine oxidase inhibitor drugs may potentiate other drugs and such potentiation may even cause death; permit at least two weeks to elapse between administration of two agents; in such patients, initiate therapy with ELAVIL HCl cautiously with gradual increase in dosage required to obtain a satisfactory response. Caution patients about errors of judgment due to change in mood, and that the response to alcohol may be potentiated. May provoke mania or hypomania in manic-depressive patients.

Side effects include drowsiness; dizziness; nausea; excitement; hypotension; fine tremor; jitteriness; weakness; headache; heartburn; anorexia; increased perspiration; incoordination; allergic-type reactions manifested by skin rash, swelling of face and tongue, itching; numbness and tingling of limbs, including peripheral neuropathy; activation of schizophrenia which may require phenothiazine tranquilizer therapy; epileptiform seizures in chronic schizophrenics; temporary confusion, disturbed concentration or, rarely, transient visual hallucinations on high doses; evidence of anticholinergic activity, such as tachycardia, dryness of the mouth, blurring of vision, urinary retention, constipation; paralytic ileus; jaundice; agranulocytosis.

Careful observation of all patients is recommended. The antidepressant activity may be evident within 3 or 4 days or may take as long as 30 days to develop adequately, and lack of response sometimes occurs. Response to medication will vary according to severity as well as type of depression present. Elderly patients and adolescents can often be managed on lower dosage levels.

Supplied: Tablets ELAVIL HCl, containing 10 mg., 25 mg., and 50 mg. amitriptyline HCl, bottles of 100 and 1000; Injection ELAVIL HCl, in 10-cc. vials, containing per cc.: 10 mg. amitriptyline HCl, 44 mg. dextrose, 1.5 mg. methylparaben, and 0.2 mg. propylparaben.

For more detailed information, consult your Merck Sharp & Dohme representative or see the package circular.

WHERE TODAY'S THEORY IS TOMORROW'S THERAPY

CONTINUED: NATIONAL REPORT SUGGESTS WAYS "TO SAVE THE CITIES"

cities; the other, predominantly white and affluent, located in the suburbs and in outlying areas.

"Equality cannot be achieved under conditions of nearly complete separation. In a country where the economy, and particularly the resources of employment, are predominantly white, a policy of separation can only relegate Negroes to a permanently inferior economic status.

"Enrichment must be an important adjunct to integration, for no matter how ambitious or energetic the program, few Negroes now living in central cities can be quickly integrated. In the meantime, large-scale improvement in the quality of ghetto life is essential.

"But this can be no more than an interim strategy. Programs must be developed which will permit substantial Negro movement out of the ghettos. The primary goal must be a single society, in which every citizen will be free to live and work according to his capabilities and desires, not his color.

"The National Advisory Commission on Civil Disorders Report offers many recommendations, including the following three 'toward the reaction of a true union:'

> "Opening up opportunities to those who are restricted by racial segregation and discrimination, and eliminating all barriers to their choice of jobs, education and housing.
>
> "Removing the frustration of powerlessness among the disadvantaged by providing the means for them to deal with problems that affect their own lives and by increasing the capacity of our public and private institutions to respond to these problems.
>
> "Increasing communication across racial lines to destroy stereo-types, to halt polarization, end distrust and hostility, and create common ground for efforts toward public order and social justice."

Continued: Many Conditions Involving Negroes "In State Of Crisis" Says Report

employment at the lowest end of the occupational scale is the single most important cause of poverty among Negroes.

"In 1966, about 11.9 percent of the nation's whites and 40.6 percent of its non-whites were below the "poverty level" defined by the Social Security Administration (currently $3,335 per year for an urban family of four). Over 40 percent of the non-whites below the poverty level live in the central cities.

"The infant mortality rate for non-white babies under the age of one month is 58 percent higher than for whites; for one to 12 months it is almost three times as high.

"The 500,000 "hard-core" unemployed in the central cities who lack a basic education and are unable to hold a steady job are made up in large part of Negro males between the ages of 18 and 25. In the riot cities which we surveyed, Negroes were three times as likely as whites to hold unskilled jobs, which are often part time, seasonal, low-paying and "dead-end."

"Many ghetto residents simply cannot pay the rent necessary to support decent housing. In Detroit, for example, over 40 percent of the non-white occupied units in 1960 required rent of over 35 percent of the tenants' income."

IN MEMORIAM

M. A. Baeff, M.D., Detroit

Michael A. Baeff, M.D., retired Detroit physician, died October 13 at the age of 85.

Born in Russia, Doctor Baeff received his medical degree from the Moscow University Medical School in 1911. From 1911 to 1923 he served in the medical military service of the Russian army.

He moved to Detroit in 1923 and joined the staff of the Rouge Hospital at the Ford Motor Company plant in Dearborn, where he was employed until his retirement in 1949.

Doctor Baeff was the founder of the Russian-American Club of Detroit.

D. J. Carothers, Jr., M.D., Charlotte

Daniel J. Carothers, Jr., M.D., Charlotte physician and surgeon, died October 25. He was 57.

Doctor Carothers had practiced in Charlotte for 22 years and was a past president of the Eaton County Medical Society.

He was graduated from Ohio Wesleyan University in 1934 and from the Western Reserve University Medical School in 1938. His internship was at Cleveland City Hospital, 1938-39. He did a residency in obstetrics and gynecology at Cleveland City Hospital, 1939-40, and was chief resident in surgery at Lutheran Hospital, Cleveland, Ohio, from 1946-47.

A flight surgeon in World War II, he received the Bronze Star for service in the South Pacific.

Doctor Carothers was a Fellow of the American College of Surgeons and a member of Alpha Kappa Kappa.

S. G. Delbert, M.D., Kalamazoo

Stewart G. Delbert, M.D., Kalamazoo general practitioner, died November 11, at the age of 59.

Doctor Delbert received the M.D. degree from the Wayne State University School of Medicine in 1941. His pre-medical education was at Michigan State University and Wayne State University.

From 1941-45 he was a member of the Army Medical Corps. Following the war, he served continuously in the Army Reserves and was a member of the Reserve Officers Association and the American Legion.

He was affiliated with Borgess Hospital and Bronson Methodist Hospital in Kalamazoo.

R. J. DeMol, M.D., Grand Rapids

Richard J. DeMol, M.D., Grand Rapids, the Michigan Hemophilia Foundation's Doctor of the Year in 1966, died November 12. He was 65.

Doctor DeMol was honored by the Michigan Chapter of the National Hemophilia Foundation when he was selected Doctor of the Year for his dedicated care of a hemophilic patient. The award was presented to Doctor DeMol during the MSMS Annual Session in Grand Rapids in 1966.

He held an A.B. degree from Calvin College in Grand Rapids and received the M.D. degree from the Northwestern Medical School, Illinois, in 1930. He was affiliated with Blodgett Hospital in Grand Rapids and was on the courtesy staff of Butterworth and St. Mary's Hospitals.

Doctor DeMol was a member of the Academy of General Practice and the Chamber of Commerce.

L. C. Dickson, M.D., Detroit

Laurie C. Dickson, M.D., Detroit internist, died October 6 at the age of 47.

Doctor Dickson was graduated in 1943 from the Johns Hopkins University School of Medicine, Baltimore, Maryland. He served as a captain in the Army Medical Corps from 1946-48.

He was a member of staff at Henry Ford Hospital, Detroit, since 1950.

Doctor Dickson was a member of the American Society of Internal Medicine and an associate of the American College of Surgeons. His medical fraternity was Phi Chi.

Survivors include his wife, Mary D. Dickson, M.D., who is a practicing physician.

S. L. Loupee, M.D., Dowagiac

A news article about the death of Doctor Loupee appears in this issue on Page 1484.

R. A. McGarry, M.D., Flint

Roy A. McGarry, M.D., long-time Flint general practitioner, died October 1. He was 80.

Doctor McGarry had practiced in Flint since 1919.

He received the M.D. degree from the University of Michigan Medical School in 1912, and then served as an instructor there for five years. During World War I he was a captain in the Medical Corps.

Doctor McGarry was a Life Member of MSMS, a Fellow of the Academy of International Medicine and a member of the Elks.

J. T. Sample, M.D., Saginaw

John T. Sample, M.D., Saginaw physician for over 50 years, died October 4. He was 85.

Doctor Sample was graduated in 1908 from the University of Michigan Medical School. After a year as a resident at University Hospital, he spent a three-year residency at Johns Hopkins Hospital. From 1912-14 he studied neuropsychiatry and general medicine in Munich and Vienna. He was a member of the U.S. Army Medical Corps from 1916-19, serving part of that time as division psychiatrist.

A Life Member of MSMS, Doctor Sample was a Fellow of the American Psychiatric Association and of the American College of Physicians, and a member of Alpha Omega Alpha, Nu Sigma Nu, and Sigma Xi. He was a member of staff at all three Saginaw medical hospitals.

Doctor Sample was a Past President of the Saginaw County Medical Society, Saginaw Rotary Club and Saginaw Valley Torch Club.

N. M. Ward, M.D., Flint

Nell M. Ward, M.D., Flint physician for 48 years, died November 4. She was 79.

Doctor Ward, born in 1889, was graduated in 1915 from the Woman's Medical College in Pittsburgh, Pennsylvania.

She maintained a general practice with special attention to obstetrics and gynecology. Her hospital affiliations were with McClaren General Hospital and St. Joseph Hospital in Flint.

A Life Member of MSMS, she retired from active practice in 1966.

Michigan Health Council Observes Silver Anniversary of Service

It was 25 years ago that the Michigan Health Council was founded by the "Big Four in Health Care" — the Michigan State Medical Society, the Michigan Hospital Association, Michigan Hospital Service and Michigan Medical Service.

The officers of these organizations recognized the desirability of comprehensive planning and organized the Council to bring complete health services to all of the people in Michigan through private means and voluntary methods by:

1. Coordinating the efforts of the four founding organizations and other groups interested in the health of the people;

2. Conducting a general education program regarding the advantage to the health of the people to be gained through the private practice of medicine and dentistry, and the operation of voluntary, non-profit hospitals;

3. Taking all necessary and practical steps to arrange for the availability of medical, dental, hospital, and related services.

THE FOUR ORGANIZATIONS did considerable joint comprehensive health planning during the first years of the Michigan Health Council. One of the first was planning a Survey of Michigan Hospitals to determine the scope of hospital services and the availability and distribution of doctors, nurses, and other health manpower throughout the State.

Another important joint effort was a Comprehensive Public Opinion Survey to determine the type of hospital-medical-surgical services that Michigan residents and their employers desired and were willing to pay for under a prepayment program. At the time, only nine percent of Michigan's citizens were covered. As a direct result of the Public Opinion Survey, the most comprehensive prepayment program ever offered was provided Michigan residents; and, within a year, there were more than 1,250,000 subscribers, and the plan became the model for the United States.

About this time, World War II ended and hundreds of thousands of veterans and doctors began returning to Michigan. The Council developed a comprehensive plan to organize community health councils in all areas of Michigan to utilize the professional skills of the returning doctors by building community hospitals and rural medical centers in areas where there was a need. Efforts to organize the community health councils were fruitful, and the prime functions of the new local councils were to:

a. aid in the promotion of better and more adequate health facilities for the community;
b. assist in the development of health information centers;
c. assist in the general development of the health professions and their objectives through coordination, surveys, health education programs, etc.

Upwards of 70 local health councils continue to function today. Some are small and have only one or two major activities, while others are in metropolitan communities with broad membership and projects.

Recognizing the need for involving many more organizations with an interest in health in the Michigan Health Council, the membership of the Council was expanded substantially in 1948 to include the American Cancer Society, the Michigan Tuberculosis Association, the Michigan Heart Association, the Michigan State Nurses Association, the Michigan Farm Bureau, and many other voluntary health agencies as well as the Michigan Department of Health.

Among the efforts of the expanded program were the sponsorship of the Michigan Rural Health Conference and the development of a film showing how community health councils could be effective in rural areas in developing rural medical centers, community hospitals, etc. The Conference gave Michigan farm leaders and farm families an opportunity to sit down with doctors and other health professions to plan new health programs and health care facilities to improve the health of rural families.

Another 15-minute film was produced in cooperation with the Michigan State Medical Society to promote careers in health. A brochure, "Planning Your Career as a Medical Associate," was produced as a companion to the film and has been distributed throughout Michigan. It was the first health career publication of its kind, covering numerous health occupations, and was reprinted by several other states.

In the early 1950s the Brookings Institute selected Michigan as a pilot state in its National

Survey of Health Resources, and the Council's officers, staff and member organizations played a major role in the planning and conducting of this important study. The Council collaborated with the American Medical Association in planning the First National Conference on "M.D. Participation in Health Councils," held in Detroit in October 1950.

In 1951, with special support from the Michigan State Medical Society and the Michigan Heart Association, planning was begun for a state-wide educational program on the importance of "Periodic Health Appraisal Examinations." A new publication, the "MHC Bulletin," was developed to keep Michigan citizens advised on the health news and events of interest to lay and professional people.

The Council embarked on the first health educational television series over WJBK-TV, Channel 2, Detroit. This continued for more than 12 years as the "Court of Health" and later as "Decision" with the Michigan Association of the Professions as co-sponsor.

Similar television series were arranged for Grand Rapids and Cadillac and still are being conducted there. The Council also has received a considerable amount of television time down through the years from other television stations throughout Michigan, particularly from Channel 6, Lansing, on the "Formula" program, sponsored by the Michigan Association of the Professions.

In December 1952 the Michigan State Medical Society invited the Council to establish an M.D. Placement Service. A comprehensive state-wide survey was conducted to determine the need for physicians. With major financial assistance from The Upjohn Company, the Council has developed a program that, for many years, has been considered the most outstanding in the Nation. More than 800 medical doctors have used the program in finding a Michigan community in which to practice. Currently the Council is assisting 126 communities that are in need of family physicians and more than 50 communities that are looking for medical specialists for their communities, their hospitals, public health agencies, industrial medical departments, mental hospitals, student health services, etc.

Recognizing that Michigan offered numerous services from voluntary as well as official health agencies of which the public was not aware, the Council planned a Directory of Michigan Health Organizations. This has proved to be a most useful publication and is published every three years. A recent feature of the Directory is the listing of health, safety and health career films.

In 1954, in cooperation with the National Health Council and the Michigan Department of Health, the Council developed a comprehensive plan for promoting public health units in unorganized areas. A "Citizens Conference on Public Health" was held at the University of Michigan on March 3-4-5, 1954.

In 1957 the Michigan Health Council again substantially increased its membership to 90 organizations and activities. The W. K. Kellogg Foundation approved a plan to develop a Dentist Placement Service, and The Upjohn Company agreed to sponsor the Veterinary Placement Service in addition to the M.D. Placement Program; and the Health Careers Program was greatly expanded.

The Council also served to plan and coordinate another important health program since 1965 — the Michigan Council on Smoking and Health. Sixteen state-wide voluntary and official organizations with a prime interest in eliminating cigarette smoking contribute financially or with staff to the Council. The National Clearinghouse on Smoking and Health has assisted the MCSH during the past two years with a special demonstration grant.

During the past five years, the Council has helped MSMS plan and coordinate Community Health Week.

The Health Council has also had a long-time interest in the elderly. More than 400 senior citizens attended the quackery conference held at Sault Ste. Marie during our 1st Annual Upper Michigan Health Conference in 1965. Quackery also was a feature of our 2nd Upper Michigan Health Congress at Marquette and our 3rd Annual Upper Michigan Health Congress held at Houghton during Michigan Week in 1968.

During the Silver Anniversary Year, the Council's health manpower efforts have been expanded to include the Health Careers Mobile. The Health Careers Mobile, started by MSMS, has been financed entirely through cooperative effort on the part of many voluntary organizations and foundations such as the Michigan State Medical Society, the Sears-Roebuck Foundation, the Michigan

Foundation for Medical and Health Education, Gerber Baby Foods Fund, and the Marlette Homes, Inc.

Through the years there has been a great amount of voluntary health planning going on in Michigan through the Council and its membership. This membership now includes nearly every Michigan United Fund health organization as well as nearly every other voluntary or governmental agency, professional association, college and university, foundation and industry with a major interest in health. This coordination has not required a huge expenditure of private or tax funds, as the planning and programming of the Council have been accomplished with annual budgets ranging from $20,000 to $85,000. Nearly all of the funds have come from grants from member organizations with a minimum from public agencies. Thousands of professional and lay citizens throughout Michigan have donated time to the Council annually.

The past is prologue, and the successes which have been made can best serve as a springboard to keeping Michigan outstanding in planning and providing health services to its present and future citizens.

IMPOTENCE

Android®
(thyroid-androgen) TABLETS

*Effectiveness confirmed by another double blind study**

1.SUMMARY

ANDROID	GOOD TO EXCELLENT 75%
PLACEBO	20%

2. Forty cases reported.
3. Cites synergism between androgen and thyroid.
4. No side effects in patients treated.
5. Alleviation of fatigue noted
6. Case histories on 4 patients.
7. Although psychotherapy still needed, role of chemotherapy cannot be disputed.

**"Sexual impotence treatment with methyl testosterone – thyroid (ANDROID) a double blind study" – Montesano, Evangelista: Clinical Medicine, April 1966.*

CONTRAINDICATIONS—Methyl testosterone is not to be used in malignancy of reproductive organs in male, coronary heart disease. Thyroid is not to be used in heart disease, hypertension unless the metabolic rate is low.

Choice of **4** *strengths*

Android

Each yellow tablet contains:
Methyl Testosterone . . 2.5 mg.
Thyroid Ext. (1/6 gr.) . . 10 mg.
Glutamic Acid . . . . 50 mg.
Thiamine HCL . . . . 10 mg.
Dose: 1 tablet 3 times daily.
Available:
Bottles of 100, 500, 1000.

Android-HP
HIGH POTENCY

Each red tablet contains:
Methyl Testosterone . . 5.0 mg.
Thyroid Ext. (½ gr.) . . . 30 mg.
Glutamic Acid . . . . 50 mg.
Thiamine HCL . . . . 10 mg.
Dose: 1 tablet 3 times daily.
Available:
Bottles of 100, 500, 1000.

Android-X
EXTRA HIGH POTENCY

Each orange tablet contains:
Methyl Testosterone . 12.5 mg.
Thyroid Ext. (1 gr.) . . . 64 mg.
Glutamic Acid . . . . 50 mg.
Thiamine HCL . . . . 10 mg.
Dose: 1 or 2 tablets daily.
Available:
Bottles of 60, 500.

Android-Plus
WITH HIGH POTENCY
B-COMPLEX AND VITAMIN C

Each white tablet contains:
Methyl Testosterone . . 2.5 mg.
Thyroid Ext. (¼ gr.) . . . 15 mg.
Ascorbic Acid (Vit. C) . 250 mg.
Thiamine HCL . . . . 25 mg.
Glutamic Acid . . . . 100 mg.
Pyridoxine HCL . . . . 5 mg.
Niacinamide . . . . 75 mg.
Calcium Pantothenate . 10 mg.
Vitamin B-12 . . . . 2.5 mcg.
Riboflavin . . . . 5 mg.
Dose: 2 tablet twice daily.
Available: Bottles of 60, 500.

Write for literature and samples:

PDR

also available with ESTROGEN
Android-E
Each Tablet Contains:
Methyl Testosterone . . . . . 2.5 mg.
Ethinyl Estradiol . . . . 0.02 mg.
Thyroid Ext. (1/6 gr.) . . . . . 10 mg.
Thiamine Hydrochloride . . . . 10 mg.
Glutamic Acid . . . . 50 mg.

INDICATIONS: Advantage is taken of the anabolic action of ANDROID without its virilizing effect. Estrogen balances the androgen—only steroid effect remains. Geriatrics, post-operative and debilitating disease, osteoporosis. **DOSE**: One tablet t.i.d. Female patients should have a rest period 5 to 7 days after 21 days of medication. **SIDE EFFECTS**: In the female, excessive dosage may produce virilizing effects of most androgens: hoarseness, hirsutism, enlarged clitoris. Symptoms can be avoided by keeping the dosage below 300 mg of testosterone per month. **CONTRA-INDICATIONS**: See Android. Ethinyl estradiol is not to be used in latent malignancy of reproductive organs or mammary glands.

Michigan State Medical Society

MSMS Members In The News

BY CAROL MAXWELL
OF THE MSMS STAFF

Dean Carron, M.D., Ann Arbor, has been appointed by Governor Romney to the State Board of Marriage Counselors for a term ending in June, 1970. Doctor Carron, a psychiatrist, is national director of the Family Service Association of America.

Edmond L. Cooper, M.D., Royal Oak, was a visiting professor of ophthalmology for two days at the University of British Columbia in Vancouver and for a day at the University of Alberta in Edmonton. He also recently addressed the semi-annual meeting of the Arizona Ophthalmological Society on "The A and V pattern: Diagnosis and Treatment" and "The Surgery of Congenital Nystagmus."

Three Battle Creek physicians received certificates of appreciation for 25 years of public service from the National Selective Service. Honored were Roy H. Baribeau, M.D., and Lloyd E. Verity, M.D. The award to Edwin L. Hansen, M.D., was presented posthumously.

Homer Stryker, M.D., Kalamazoo, was the recipient of a presidential citation from the President's Commission on Employment of the Handicapped. The award was presented to Doctor Stryker, orthopedic surgeon and inventor of several orthopedic instruments, at an "Ability Counts Banquet" in Lansing.

Alfred Swanson, M.D., Grand Rapids, was featured in a special documentary television program showing Doctor Swanson at work helping to establish a volunteer medical program to treat Vietnamese civilians. A WOOD-TV photographer accompanied Dr. Swanson on his recent trip to Vietnam — his fifth in the past eight years.

M. S. Brent, M.D., Detroit, has retired from the private practice of medicine to devote more time to the administration of the Brent General Hospital, which he founded more than 25 years ago.

Joseph Scher, M.D., Mt. Clemens, reigned as "King of Football" at the Mt. Clemens Alumni Night football game. That title, an annual tribute to an outstanding man of the community, went this year to Dr. Scher for his devoted service as school and team physician for 33 years.

Douglass Haddock, Jr., M.D., Portage, is the author of an article in the October 28 issue of *Medical Economics* describing a method to set proper charges on the basis of your costs."

Samuel Gershon, M.D., New York City, former U-M Medical School faculty member, has been promoted to professor of psychiatry at New York University School of Medicine, where he is director of the Neuropsychopharmacology Research Unit. He was chief of the schizophrenia and psychopharmacology project at the University of Michigan from 1959-61.

Edwin J. Rennell, M.D., Coldwater, has retired from the position which he held for almost 25 years as medical superintendent of the Coldwater State Home and Training School. Robert A. Wise, M.D., Coldwater, will serve as the new medical director of the Coldwater State Home and Training School. He has been a member of the Coldwater staff since 1959.

Vital Need for Medical Manpower Emphasized Throughout Michigan

Leading citizens across the state are hearing MSMS officials declare that:

"Together, we must more effectively tell all the people of Michigan about the need to educate more physicians in Michigan and then the people must urge their Governor and their elected representatives in the State Legislature to get on with the job.

"If this is done with dispatch, Michigan citizens can be assured of the availability of the first-class medical care that everyone wants — indeed, demands — and which must be provided for them."

That strong statement was made December 12 at Bloomfield Hills at a metropolitan regional meeting of community leaders and officers of the county medical societies in southeastern Michigan by Robert J. Mason, M.D., President-Elect of MSMS.

Doctor Mason, in part, stressed:

"Michigan must carry out a program for health manpower development which makes sense, which is fiscally responsible and which will bring about speedy results. We need to immediately expand the enrollment at the University of Michigan and Wayne State University medical schools and to expand the present two-year medical program at Michigan State University to a four-year, degree-granting program."

Other regional conferences in November and December were held also by MSMS at Grand Rapids and Saginaw to help implement a manpower resolution adopted by the 1968 House of Delegates and a position statement developed by the MSMS Council at its November meeting. MSMS officials at the meetings also have explained the MSMS proposal that the three medical schools offer students the choice of an MD or DO degree, rather than have the state finance a proposed osteopathic school.

Many state and local civic leaders have endorsed the MSMS proposals, and important support has been voiced by the news media.

The Detroit News, in an editorial, declared in part: "It takes mountains of money to build and run a medical school. The money is not yet in sight to develop the U-M and WSU schools to the fullest much less to fulfill the MSU vision of its two-year school expanded to a four-year degree institution. Can the state money the osteopathic boosters acknowledge they need to get anywhere come other than at the expense of these going institutions?" (The full editorial will appear in the January issue of *Michigan Medicine.*)

The Ann Arbor News, in an editorial, suggested, "Let's not throw medical school planning off on the wrong track by elevating osteopathic education to separate institutional basis. The request for full state aid is bound to come. The Legislature should have the wisdom to say no."

The editorial also contended that ". . . if the osteopaths want separate facilities they should finance the college's construction and operations privately, and not seek to pass the costs on to the taxpayers."

The Lansing State Journal editorial page recently said, "It would seem to us that acceptance and implementation of the plan for state-supported joint facilities for training doctors of osteopathy and doctors of medicine would be an important contribution to meeting the urgent need for physicians."

More information about this MSMS public-service effort to arouse the Governor and State Legislature to allocate more funds to educate more physicians in Michigan will appear in the January issue of *Michigan Medicine.*

Ways to help alcoholics employed in industry, to recognize them and refer them to assistance were explored at a recent joint meeting of the Committee on Alcoholism and Drug Dependence and the Committee on Occupational Health. Leaders were Herbert A. Raskin, M.D., at head of table, alcoholism chairman, and William Jend, Jr., M.D., at Doctor Raskin's right, occupational health chairman.

MSU to Study Teaching Skills

Michigan State University's medical school is the recipient of a $125,000 inheritance for its proposal to study techniques of making community physicians more effective teachers of medical students.

The American Medical Association, holding its 22nd annual clinical convention in Miami Beach, presented the sum Dec. 3 to Andrew D. Hunt, Jr., M.D., dean of the College of Human Medicine, fulfilling a bequest of the late Dr. John Snavely of Sterling, Ill.

Dr. Snavely, who died Jan. 15, 1967, willed one-sixth of his estate to be distributed to medical colleges for medical research as determined by the Board of Trustees of the AMA. MSU's proposal was one of six selected for the grant by the AMA.

Through seminars and workshops, MSU plans to prepare materials, such as audio tapes, to teach community physicians to use modern techniques as they instruct MSU students.

"We want to involve community physicians in our program more actively than most schools do," says Hilliard Jason, M.D., director and professor of medical education, research and development in the MSU College of Human Medicine. "Not only do we want them to come to MSU to teach but we also want to send students to their offices, hospitals and emergency rooms around the state. To do this properly we want physicians who can be counted on as effective teachers."

DID YOU PULL MATERNAL HEALTH CARDS FROM JOURNAL?

By James E. Harryman, M.D., Chairman
Committee on Maternal Health

In the December issue of *Michigan Medicine* the accumulated MSMS Maternal Health Desk Cards 1 through 11 were printed. Did you save them?

Originally the Committee on Maternal Health under the chairmanship of Francis Jones, M.D., Lansing, published the "Obstetrical Brevits" in *Michigan Medicine* as its effort toward continuing medical education.

In 1961, under the new chairman William W. Jack, M.D., Grand Rapids, the Maternal Health Desk Cards were the brainchild of Charles M. Bell, M.D., of Grand Rapids. They continued to be produced by him with the aid of the Committee until 1967 when the chairmanship of the sub-committee for Continuing Medical Education was passed to Reinard P. Nanzig, M.D., Grand Rapids, who has been responsible for the updating of the information contained therein.

Symposium Jan. 17-18 on Blood

Donald McKay, M.D., University of California, will be among 20 speakers scheduled for the 17th annual Symposium on Blood Jan. 17-18 at Wayne State University.

Eberhard F. Mammen, M.D., of the WSU Department of Physiology and Pharmacology, one of the conference planners, calls Doctor McKay a "world-renowned authority" on the pathology of Disseminated Intravascular Coagulation, theme of the conference. Doctor McKay's topic will be "Tissue Damage Caused by Disseminated Intravascular Coagulation."

Other speakers scheduled for the symposium are Robert Hardaway, M.D., U.S. Army General Hospital in Frankfurt, who will discuss "Disseminated Intravascular Coagulation in Shock," and Charles C. Owen, M.D., Mayo Clinic, who will talk about "Chronic Intervascular Coagulation Syndromes."

The McGregor Memorial Conference Center at WSU will be headquarters for the meeting. Discussions will cover the clinical, patho-physiological, pathological and therapeutic aspects of disseminated intravascular coagulation and the aspects of disseminated intravascular coagulation in organ transplantation.

Molner Dies; Health Officer, Medical Writer

Joseph G. Molner, M.D., nationally syndicated newspaper columnist and former Detroit and Wayne County Health Commissioner, died Nov. 16 at the age of 61.

His service with Detroit began in 1938, when he became deputy health commissioner. He was made Detroit medical director in 1942 and in 1949 was made city health commissioner.

He became city-county health commissioner in 1958 when the medical posts were merged.

Doctor Molner was a 1935 graduate of Wayne State University Medical College and received a master's degree in public health at Johns Hopkins University. He studied tropical diseases in Central America under the auspices of the Rockefeller Foundation and later taught tropical diseases at Wayne.

Doctor Molner was the author of numerous books and articles in medical journals on communicable diseases and was one of the nation's foremost authorities on polio. For many years he served as medical consultant to the National Foundation for Infantile Paralysis.

Doctor Molner was a former director of the Michigan Public Health Association and one of the founders of the American Board of Preventive Medicine and Public Health.

Genesee Society To Hear Bates

Invitations are out for the annual black-tie dinner scheduled at 7:30 p.m. Jan. 8 by the Genesee County Medical Society. Speaker for the dinner, to be staged at the IMA Annex, Flint, will be Richard C. Bates, M.D., of Lansing.

THOSTESON, AIDE CONTINUE "MOLNER COLUMN"

"To Your Good Health," nationally-syndicated column by the late Joseph G. Molner, M.D., is being continued as a regular newspaper feature. The current authors are George C. Thosteson, M.D., and Jack Pickering, who have been collaborating with Doctor Molner since the column was started in 1952.

Doctor Thosteson, a specialist in internal medicine, will give up his private practice to give full attention to the column. Mr. Pickering, one of the top medical writers in the United States, has helped write the daily copy for "To Your Good Health" for 16 years.

'Tis the Season

The 89 members of the St. Clair County Medical Society's Woman's Auxiliary are again conducting their annual Christmas card sale for the benefit of the AMA-ERF scholarship-loan fund.

For seven years the women have selected greeting card designs relating as closely as possible to the medical field, having them printed by local concerns and offering them for sale to physicians.

Mrs. Claude Ludwig is chairman of this year's volunteer project. Last year's raised $827.

At the recent Hope College convocation honoring South Africa's Christian Barnard, M.D., Ph.D., the MSMS was represented by Executive Director Hugh W. Brenneman, far left. Others pictured, from left, are James L. Poppen, M.D., Ph.D., Chicago neurosurgeon; Doctor Barnard, who received an honorary doctor of science degree; Calvin Vander Werf, Ph.D., Hope College president, and Hugh De Pree, chairman, Hope College Board of Trustees.

USE CHRISTMAS SEALS

A Saginaw County TB Hospital patient, at left, receives encouragement in her fight against the disease by Barbara Cronin of Warren, former TB patient, now Michigan chairman of the TB Christmas Seal campaign, and R. A. Clowater, M.D., medical director of the hospital. Michigan physicians and their wives are helping the Michigan Tuberculosis and Respiratory Disease Association raise $1,632,000 through its current Christmas Seal campaign.

$16 Million in Federal Grants Approved for Detroit Center

Nearly $16 million in federal grants have been approved, though not funded, for the Harper-Webber Medical Center project in Detroit.

The hospital was notified late in November by HEW that the NIH grants were approved. They represent approximately 40 per cent of the $39 million estimated cost of the project.

In addition to the construction of a 348-bed teaching unit, to be known as the Webber Memorial Building, the project includes extensive modernization of Harper's existing buildings. WSU plans to utilize the enlarged hospital as a principal teaching facility for adult medicine and surgery.

The proposed increase in facilities would make it possible for WSU to almost double its student enrollment. Target date for completion of the Webber Building is late 1971, when the WSU Medical School will move to the main campus in the Detroit Medical Center.

ACP Program On Cancer Care Soon at WSU

The American College of Physicians will present a four-day meeting about "The Internist and Total Cancer Care" Jan. 20-24 at McGregor Memorial Community Arts Center, Wayne State University.

Topics to be discussed will include Cancer Detection and Early Diagnosis, Facilities and Resources for Cancer Care, The Internist and Primary Cancer Treatment, Chemotherapy, Endocrine Neoplasms, Leukemia-Lymphoma and Management of Cancer Symptomatology.

"This course is aimed toward preparing internists to meet their responsibilities in total cancer care," according to the sponsors. "A thorough grounding in theoretical principles plus intensive teaching in practical medical oncology will be provided."

Michael J. Brennan, M.D., F.A.C.P., is director of the meeting. He is president, medical and scientific director of the Michigan Cancer Foundation. His co-directors are Robert W. Talley, M.D., F.A.C.P., and Vainutis K. Vaitkevicius, M.D., F.A.C.P.

Registrations are to be forwarded to Edward C. Rosenow, Jr., M.D., F.A.C.P., executive director, American College of Physicians, 4200 Pine St., Philadelphia, Pa., 19104.

Michigan State Medical Society
103rd Annual Session
September 22-24, 1968

CALL TO ORDER AND SPECIAL REPORTS

1. Call to Order

The House of Delegates of the Michigan State Medical Society, meeting at the Sheraton-Cadillac Hotel, Detroit, Michigan, on September 22, 23, and 24, 1968, convened at 8:20 p.m. on Sunday, September 22, James B. Blodgett, MD, Speaker, and Vernon V. Bass, MD, Vice-Speaker, presiding.

2. Invocation

The Speaker called upon R. R. Cooper, MD, to give the invocation.

3. Report of Credentials Committee

Chairman K. T. McGunegle, MD, reported, "There are 132 Delegates seated, the majority of whom are not from any one county."

4. Report of Committee on Rules and Order of Business

Chairman H. A. Scovill, MD, recommended adoption of the printed order of business, particularly Item No. 21 thereof which specified that resolutions may *not* be introduced after the close of the second meeting, tomorrow morning, September 23, unless by consent of two-thirds of the seated delegates.

This procedural change, recommended by the House Committee on Procedures and subsequently discussed at Councilor District Conferences, was to expedite the business of the House while still providing full opportunity for the introduction of matters which must be deliberated.

The Committee also recommended that the House give the Speaker the right to recess its proceedings to a time certain at his discretion and without a vote of the body.

Finally, it was recommended that Robert's Rules of Order govern the proceedings of the House, except for recess power.

The report was adopted.

5. Speaker's Remarks — J. B. Blodgett, MD

This is the first annual session of the House at which it is my privilege to preside. The honor of this office is derived from the high character and devotion of those delegates to this House who have represented their colleagues over the years, and from the excellence and fairness of the Speakers who have served this House in the past.

It is the Speaker's duty to conduct the affairs of a deliberative assembly in such a way that the business may be effective, expeditious, systematic, uniform and equitable. The purpose is to implement the rule of the majority and at the same time protect the rights of the minority.

The House and the Speaker are indebted to Dr. Noyes Avery's Committee on Procedures of the House. His recommendations for more efficient conduct of our business have been incorporated into this meeting and are recorded in this report.

One of these innovations is the Tuesday dinner meeting of the House. At that time it will be our privilege to install the new President and to honor our specially distinguished members. I have asked Mr. Stewart Kerr, our Legal Counsel, to act as our parliamentarian. I wish to express my thanks to the staff for their tremendous assistance in preparing for this meeting.

(The following report of the Speaker was presented to the Delegates in printed form.)

This is a brief review of the implementation of resolutions adopted by the 1967 House of Delegates. (For complete text of resolutions with House action, refer to the Digest of Proceedings — Part 2, *Michigan Medicine*, December, 1967.)

Summary.

A. Resolutions adopted:
  1. Commendation or approval: Resolutions 37, 48, 53, 61, 62, 63, 64
  2. Economics: Resolutions 14, 20, 32, 33, 36, 41, 44, 59
  3. Bylaws: Resolutions 7, 8, 39, 55
  4. Legislative: Resolutions 3, 13, 40, 42, 49, 51, 58
  5. Miscellaneous: Resolutions 6, 10, 17, 18, 21, 22, 23, 24, 25, 31, 35, 46, 47, 52, 54, 56, 57, 60

B. Resolutions disapproved: Resolutions 1, 4, 5, 9, 11, 29, 30, 34 (but House appointed Committee to Study Duties of the President), 38, 45

C. No action: Resolutions 2, 12, 15, 16, 19, 26, 27, 28, 43, 50

Res. 1 — Section Delegates, Right to Vote. This resolution was disapproved by the House.

Res. 2 — Hospital Privileges. The House took no action on this resolution.

Res. 3 — Repeal of Basic Science. Although a concerted attempt was made, SB 227 (repeal of Basic Science), which had passed the State Senate in 1967, failed to pass the House of Representatives in 1968, largely because of the refusal of the House State Affairs Committee to permit the House to debate and vote upon the bill. (The 1968 Legislature did adopt a bill, supported by MSMS, which makes possible the waiving of the Basic Science examination for any licensure candidate who has previously passed "substantially equivalent" examinations as given by the National Board of Medical Examiners. This law takes effect 90 days following adjournment of the 1968 session.)

Res. 4 — Definition of Specialist. This resolution was disapproved by the House.

Res. 5 — Rescind Resolution 22, 1966 MSMS House of Delegates. This resolution was disapproved by the House.

Res. 6 — William Beaumont Commemorative Postage Stamp. MSMS prepared a resolution which was adopted by the Michigan Legislature, which will give impetus to MSMS plans, as directed by this resolution, to petition the Postmaster General of the United States to issue a commemorative stamp honoring Doctor Beaumont on the 150th anniversary (1822-1972) of the "Mackinac Island Miracle." MSMS is coordinating its efforts with the State Medical Society of Wisconsin.

Res. 7 — Number of Terms for MSMS Councilors. This change in the Bylaws, limiting to three the consecutive terms Councilors may serve, was incorporated in the 1967 revision of the MSMS Constitution and Bylaws, *Res. 8 — Physical Medicine.* This change in the Bylaws, establishing a Section on Physical Medicine, was incorporated in the 1967 revision of the MSMS Constitution and Bylaws.

Res. 9 — Medical Advisors to Michigan Partners of the Alliance. This resolution was disapproved by the House.

Res. 10 — Board of Pharmacy Rules & Regulations 338.486-16(c). This resolution, requesting that a Board of Pharmacy rule be rescinded, was referred to the MSMS Liaison Committee with the Michigan State Pharmaceutical Association for further study and report back to the House. The Committee is continuing its study of this problem and will make recommendations to the House in 1969. (See Annual Report of Committee.)

Res. 11 — Guidelines on Utilization. This resolution was disapproved by the House.

Res. 12 — Hospital Utilization Review Manual. The House took no action on this resolution.

Res. 13 — Single Medical Practice Act. A proposed bill to establish a single medical practice act is being developed by a subcommittee of the Legal Affairs Committee and will be submitted to the House of Delegates in 1968 for its consideration.

Res. 14 — Joint Committee with State Bar of Michigan to Study the Problem of Malpractice Suits. This resolution, concerning the feasibility of establishing a commission to study the problem of increasing malpractice suits against physicians, has been favorably considered by both the MSMS and State Bar committees. Representatives from both professions soon will be appointed so that this important study can be underway.

Res. 15 — Utilization Control. The House took no action on this resolution.

Res. 16 — Utilization Control. The House took no action on this resolution.

Res. 17 — Financial Remuneration for MSMS Officers. This resolution directed the Finance Committee of The Council to investigate the concept of adequate financial remuneration for MSMS officers, and suitable means of securing funds for this purpose, and report to the 1968 House of Delegates.

The Finance Committee has studied this matter during the past year and surveyed past officers of MSMS. The Committee finally concluded that there was no general agreement on the question of remuneration as to method, amount, desirability, or who should be remunerated. (See Annual Report of The Council for further detail.)

Res. 18 — Health Information Research Institute. This resolution directed The Council to provide for organizational expenses of the Health Information Research Institute incidental to its incorporation, materials necessary to present the principles of the Institute to prospective sponsors, and such seed money as The Council deems necessary and available within the limits of its present budget.

This item was considered by the Finance Committee and The Council and incorporated in the 1968 MSMS budget.

Res. 19 — Hospital Utilization Review Manual. The House took no action on this resolution.

Res. 20 — Physician Responsibility for Physical and Occupational Therapies. This resolution, which related to procedures of the carrier and fiscal agent for the Medicare program, was forwarded to Michigan Medical Service for study and implementation.

Res. 21 — Chiropractic. This resolution "encouraged MSMS to initiate an educational program to enlighten the general public on the dangers of the use of unscientific methods by the chiropractic cult." Educational conferences on health quackery were held in Detroit and Lansing for the public and physicians. Recommendations for a new ongoing "MSMS Committee on Health Quackery" to carry out an educational effort grew out of the Lansing invitational conference April 1 and were adopted by The Council in June. This committee now will seek continually to educate the public about quackery, including the cult of chiropractic.

Res. 22 — Study of Adequacy of Training of Certain Para-Medical Personnel. This resolution directed the Committee on Rehabilitation, with the Education Liaison Committee, to study the adequacy of training, the practice procedures allowed, and the limitations of responsibilities of physical therapy assistants, and report to The Council. Preliminary discussions were held with the three medical schools on this question. However, the Committee on Rehabilitation did not feel it could make the study as outlined in the resolution, but felt that it was in a good position to review such programs which come into existence in the state. The Committee has been aware of such programs in Michigan, through some of its committee members, and felt that the existing programs had adequate curricula. The Committee will review any new programs for teaching and training paramedical personnel in the state and will keep The Council informed.

Res. 23 — Recognition of the Board of Registration of Physical Therapists. This resolution instructed the MSMS Rehabilitation Committee to inform MSMS members re "qualifications of the different groups of practicing physical therapists." After considering this resolution, the Rehabilitation Committee informed The Council that "there is only one body of registered physical therapists, with no other level of physical therapists being recognized at this time. The Michigan law definitely sets forth the qualifications of a physical therapist. An explanatory letter and a copy of the Michigan law was sent to component society secretaries."

Res. 24 — AMA Delegation Chairman to Attend Council Meetings. This resolution directed that the current AMA Delegation Chairman be invited to attend all meetings of The Council and this is routinely done.

Res. 25 — Care of Handicapped Children. The House took no action on this resolution re MSMS support of the Michigan Ad Hoc Committee for the Care of the Handicapped Child, but did approve its intent. The reference committee noted "that this effort is in accord with the reference committee's recommendation that a new special committee of MSMS be formed for coordinating the care of the handicapped children." The reference committee recommended, therefore, that the Ad Hoc Committee of the American Academy of Orthopedic Surgeons channel its efforts through the MSMS.

After considering this resolution and the referenece committee action, the MSMS Committee on Rehabilitation adopted a motion that the Committee cooperate in all ways possible with the Committee for the Care of the Handicapped Child of the American Academy of Orthopedic Surgeons and maintain liaison with the other organizations, agencies and departments involved in the care of handicapped children.

Res. 26 and Res. 27 were withdrawn by the introducers.

Res. 28 — Physician Involvement in Operation of Variable Fee Program. The House took no action on this resolution.

Res. 29 — Blue Shield Responsibility to House of Delegates. This resolution was disapproved by the House.

Res. 30 — Michigan Medical Service. This resolution was disapproved by the House.

Res. 31 — Supporting Appropriations for Four-Year Medical School at MSU. This resolution directed MSMS to support the request of the State Board of Education for an appropriation to enable MSU to expand its College of Human Medicine to a four-year medical school.

Letters indicating MSMS support of this request were sent to the Governor and other appropriate state officials, and subsequently the requested funds were appropriated by the Legislature.

Res. 32 — Participation in Michigan Medical Service. This resolution recommended to the Board of Michigan Medical Service that individual case participation be allowed in all new contracts.

The resolution was transmitted by letter to Michigan Medical Service for information and implementation. Subsequently MSMS reported to The Council that a study was being undertaken to determine the effect of per case participation on the overall participation program.

Res. 33 — Blue Shield "Action Line" for Medicare-Medicaid Cases. This resolution recommended to the Michigan Medical Service Board that it "establish a better mechanism than is now present to resolve promptly questions from doctors concerning Medicare and Medicaid cases."

This resolution was transmitted to MMS by letter for information and implementation. Subsequently Blue Shield reported to The Council that in the fall of 1967 a special handling section was established for processing status inquiries. The staff of the Personal Services Department was increased, and the number of Professional Relations and Telephone Service representatives was increased. A new modern Telephone Service area has been constructed in the headquarters office to speed internal handling of physicians' calls. In addition, a member of the Blue Shield public relations staff is coordinating the handling of especially urgent or sensitive inquiries and expediting their processing in cooperation with other Blue Shield departments.

Res. 34 — Responsibilities of MSMS President. This resolution was disapproved by the House. However, the House approved a reference committee recommendation that an ad hoc committee of the House of Delegates be appointed to re-evaluate the executive duties of the President. This committee is studying the matter and will report directly to the House.

Res. 35 — Approval of Screening Programs. The resolution directed that The Council limit its approval of screening programs to those previously approved by the component medical society or societies in which the program is to be carried out.

This MSMS policy was in effect prior to the time the resolution was adopted, so no further action was required.

Res. 36 — Proposed Blue Shield Benefits for Sterilization. The resolution directed that MSMS through appropriate officers apprise Michigan Medical Service of the Society's opposition to the MMS restriction denying surgical benefits for sterilization procedures, and request that the restriction be eliminated.

This matter was brought to the attention of the Blue Shield Board by MMS officers and Blue Shield has advised MSMS that the Blue Shield Medical Advisory Committee has approved the inclusion of inpatient male and female sterilization for medical necessity as a benefit under the M-75 program. It already is included in the new MVF programs.

Res. 37 — Honoring Physicians Who Have Served in Viet Nam. This resolution commended several Michigan physicians who had served in Viet Nam.

The March issue of *Michigan Medicine* was dedicated to MSMS members who have served in Viet Nam during the past year, with articles and photographs by and about the physicians. (AMA plaques honoring physicians who have served in Viet Nam since the 1967 House of Delegates will be presented at the 1968 House of Delegates meeting.)

Res. 38 — New Blue Shield Program, Deletion of Certain Benefits. This resolution was disapproved by the House.

Res. 39 — Medical Society Membership for Osteopathic Physicians. This resolution directed that component medical societies be encouraged to offer associate memberships to osteopaths on an individual basis, and outlined provisions whereby such associate members of component societies could be admitted to associate membership in MSMS.

Component society officers were informed of the resolution and its contents by letter, and appropriate publicity appeared in *Michigan Medicine.*

Res. 40 — Revision of Michigan's Abortion Laws. This resolution directed that MSMS work toward the revision and liberalization of the Michigan abortion laws. The House adopted a recommendation of the reference committee that an MSMS ad hoc committee formulate a position statement on therapeutic abortion and report its findings to the House at the 1968 session.

The special committee has been appointed and will make its report to the House.

Res. 41 — Inclusion of MDPAC in MSMS Dues Billing. As directed by the resolution, the MDPAC donation was included in the MSMS dues billing with a note that this portion is voluntary and not deductible.

Res. 42 and Res. 49 — Separate Michigan Department of Health Covering Health-Related Activities. These resolutions directed that MSMS contact the Governor informing him in the most forceful way possible that MSMS supports the retention of health-related activities within a strong separate Michigan Department of Public Health.

Immediately following the House of Delegates meeting, a letter was sent to the Governor, presenting in some detail and in a forceful manner the MSMS views on this subject. The Governor felt that a merger of the State Department of Public Health and of the State Department of Social Services at present would be inappropriate.

Res. 43 — Support of AMA Policies on Health Services. The House took no action on this resolution.

Res. 44 — Joint Billings of MDPAC Contribution with MSMS Dues Statement. (See implementation of Resolution 41 above.)

Res. 45 — Contracts for Physicians' Services. This resolution was disapproved by the House.

Res. 46 — Medical Student Preceptorship Program. This resolution directed that MSMS, in cooperation with the three Michigan medical schools and their SAMA chapters, establish a preceptorship program throughout the state.

The Council referred this resolution to the Education Liaison Committee. The possibilities of establishing a preceptorship program as requested by the resolution are under study by the Committee and representatives of the three medical schools. In effect, this is a continuing study (which has many ramifications) of a preliminary investigation several years ago by the same Committee.

Res. 47 — Local Responsibility for Health Programs. The resolution specified two kinds of action: 1) That MSMS charge component medical societies with the responsibilities of establishing effective lines of communication with the local health departments and local chapters of all voluntary health organizations and agencies, and 2) that MSMS urge component medical societies to periodically inform the agencies and organizations that the component medical societies recognize their responsibility in all health programs, screening programs, etc.

A letter developing the intent of this resolution was sent to every component medical society; and related letters were sent during the year dealing with such specific matters as component society involvement in disaster emergency medical care planning, health manpower and recruitment, etc.

Res. 48 — Wayne State University Centennial. The resolution directed MSMS to present an award to WSU honoring the WSU Centennial and to call the centennial to the attention of the AMA House of Delegates. The AMA concurred in an MSMS-sponsored resolution at the winter AMA House of Delegates meeting, recognizing the WSU Centennial. A framed copy of the 1967 MSMS House of Delegates resolution was presented to WSU during its centennial observance in the spring.

Res. 49 — Separate State Health Department. (See implementation under Res. 42 above.)

Res. 50 was withdrawn by the introducer.

Res. 51 — Driver Capability and Re-Evaluation for Licensure. This resolution directed MSMS to "offer its services to the Legislature and the Secretary of State in an advisory capacity to assist in the development of means whereby a fair evaluation of driver capabilities may be accomplished permitting the restriction or withdrawal of driving privileges from those judged to be physically or mentally incapable."

Attempts by the Highway Injuries Committee and the Legal Affairs Committee to secure legislation were unsuccessful. However, the matter is still under consideration by the Secretary of State's office for 1969.

Res. 52 — Physician Representation on Hospital Governing Boards. This resolution stated that hospital boards of trustees should have adequate medical representatives. The intent of this resolution was transmitted by letter to the Michigan Hospital Association. In response MHA indicated that it agreed that improved communications were necessary, and that it favored the joint conference committee approach, whereby chairmen of the different medical services and the chief of staff meet with an equal number of representatives of the Board of Trustees and the hospital administrator.

Res. 53 — MSMS Support of 1968 Student American Medical Association Meeting in Detroit. The resolution directed that The Council and staff extend all possible cooperation and support to this SAMA convention.

After consultation with SAMA officials, The Council authorized a $500 program grant and staff assistance to SAMA for this national meeting.

Res. 54 — MSMS Liaison with Students of the Health Care Professions. This resolution directed appointment of a liaison committee with students of the health care professions in order to extend the availability of medical care.

The Council requested the Liaison Committee with Residents, Interns and Medical Students to implement the intent of this resolution. The Committee is now studying possibilities for extending liaison with students of the health care professions, in order to appropriately implement the resolution.

Res. 55 — Antidiscrimination in the Michigan State Medical Society. This resolution proposed an amendment to the MSMS Bylaws adding a sentence, "There shall be no discrimination on the basis of race, religion, sex, or ethnic origin."

This change was incorporated in the 1967 revision of the MSMS Constitution and Bylaws.

Res. 56 — Development of Physicians' Hospital Privilege Act. The House instructed the Legal Affairs Committee to study the feasibility of developing a Physicians' Hospital Privilege Act embodying the intent of the AMA resolution that all doctors of medicine be accorded hospital privileges commensurate with their training, experience and competence.

A Legal Affairs Committee special study group has concluded that such a law would not be feasible. It is recommended, however, that the House of Delegates again reaffirm its position that no ethical physician should be refused staff privileges for reasons of race, creed or color.

Res. 57 — Creation of an MSMS-Sponsored Academy of Medical History as a Division of the Historical Society of Michigan. Alfred H. Whittaker, MD, a member of the MSMS Committee on Michigan Medical History and introducer of the resolution, is working with the Michigan Historical Society to establish a medical history branch within that Society.

Res. 58 — Clarifying Michigan Law to Safeguard Privileged Character of Medical Records. This resolution directed that MSMS work with the State Bar and the Legislature to clarify and strengthen Michigan laws and court rules re safeguarding the privileged character of medical records.

A subcommittee of the MSMS Liaison Committee with the State Bar of Michigan has been appointed and will meet soon with a State Bar subcommittee to study this matter.

Res. 59 — Appeal Mechanism for Unresolved Adjudication. This resolution directed MSMS to establish an appropriate appeal mechanism available to MMS or the physician concerned in cases of unresolved adjudication.

The Council adopted an opinion of the County Societies Committee that adequate appeal mechanisms already exist and that our knowledge of the existing machinery should be routinely made available to carriers other than Blue Cross-Blue Shield. In The Council's view no further action need be taken.

Res. 60 — Acceptance of Osteopaths as Residents and Interns. This resolution directed that the AMA Council on Medical Education be requested to amend its position so that osteopathic graduates might be accepted as residents and interns.

This resolution was brought to the attention of the AMA Council on Medical Education by letter shortly after the House of Delegates meeting and subsequently a Michigan resolution to this effect was introduced into the AMA House of Delegates at its June, 1968, meeting. The AMA resolution was referred to the Board of Trustees and the Council on Medical Education for consideration.

Res. 61 — Health Council's Silver Anniversary. The House of Delegates commended the Michigan Health Council (and the various foundations which contribute financial support) for its "past accomplishments and present programs." The Council presented a citation (officially explaining the action by the delegates) to the Health Council during the midsummer meeting at Mackinac Island, when Health Council officials met with The Council for presentation of their annual report.

Res. 62 — Commendation of Retiring Director of Michigan Department of Public Health. The House suspended the rules and adopted this resolution by a rising vote. The resolution recognized "the distinguished and outstanding service" of Doctor A. E. Heustis, retiring director of the Health Department. An illuminated copy of the resolution was presented to Doctor Heustis upon its adoption.

Res. 63 — Appreciation to Speaker Lightbody. The resolution called for appropriate recognition of the fine service by Doctor Lightbody as retiring Speaker of the House of Delegates. A framed pen-and-ink sketch of Doctor Lightbody with a small printed note of appreciation under the sketch was presented to Doctor Lightbody at the Midsummer Session of The Council.

Res. 64 — Commendation to Vice-Speaker Hayes. The resolution asked that a suitable commendation be presented to Doctor Hayes as retiring Vice-Speaker of the House. A framed copy of the resolution was presented to Doctor Hayes at the MSMS Conference on Health Care Planning in Detroit in February.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the Report and commended the Speaker for the printed Summary.

6. Remarks of AMA President-Elect G. D. Dorman, MD

Doctor Dorman addressed the House on the subject of "Unity in Medicine."

7. President's Address — Bradley M. Harris, MD (extracted)

The federal establishment has an ever increasing role in medical care. We must continue to be alert and interested and provide leadership in the programs which concern federal medical legislation. Within the next two months we will elect a new House of Representatives and a new president. I realize that I am repetitious but I cannot urge you too strongly to become actively involved both financially and physically in both the national and state political campaigns. The 90th Congress is examining Medicare in terms of cost and need and there will be changes in regard to administration of the programs. We have a vested interest as physicians, as well as taxpayers, in this legislation. It behooves each of us to make our views apparent to the candidates. The Heart Cancer and Stroke program has expended something over a million dollars in Michigan to date without visibly influencing the care of any significant portion of the population. This is intended to provide, among other projects, a continuing educational program directed to the practicing physician. Our Society has conducted in collaboration with our medical schools a very successful program for many years. The opportunity to expand and intensify these efforts would appear to be the most immediate and feasible method at this time.

I would urge a closer liaison between the director of the program and our Postgraduate Committee to the end of early development of this available source of dissemination.

Medicine is a proud profession and I am certain it will always be. But we are not too proud to ask the help of intelligent and dedicated laymen when their assistance can aid us in increasing the quantity and quality of medical care we can offer our patients.

For some time the Michigan State Medical Society has been on record as favoring the expansion of the medical schools at the University of Michigan and at Wayne State University. Further, we have strongly endorsed the expansion of the two year medical school at Michigan State University to a four year school. Concomitant financial support through action of the Michigan Legislature is necessary.

Although there is a strong basic science program at Michigan State, and the new life sciences building and additional faculty will expand these facilities, the present great need is financial support to develop the clinical areas of the medical school curriculum to qualify as a Class A four year medical school.

I suggest that we should strongly urge the development of citizens groups to augment our appeal to the legislature to provide the support necessary to bring this program to fruition. This must be accomplished prior to any commitment to a fourth tax-supported medical school in Michigan.

At the request of the 1967 House of Delegates an Ad Hoc Committee has produced a single medical practice act which will be introduced into the next session of the Michigan Legislature. They have accomplished a monumental task. I think we must realistically recognize that this will meet with opposition. The other disciplines will most certainly resist for various political reasons, with which you are familiar.

Here again the wide spread support of citizens groups in support of a single standard in the healing arts can be of inestimable assistance.

The Ad Hoc Committee requested in Resolution 40 of the 1967 House has studied the Therapeutic Abortion Problem in depth. Their report which is before you, I feel presents an affirmative position which the Society can support without apology.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recognized the fine work of the President during the year, noted his recommendations and "particularly urged each county society to develop citizens' groups to augment our appeal to the Legislature to provide necessary support for our program" seeking expansion of MSU to a four-year medical school.

THE HOUSE adopted the report of the Reference Committee.

8. President-Elect's Address — James J. Lightbody, MD (extracted)

This is the first opportunity I have had to express to this House of Delegates my deep appreciation for the privilege of being your Speaker of the House for the past eight years and as Vice-Speaker for three years before that. During those eleven years as an officer of this House of Delegates, I was extremely fortunate to have had the opportunity of working with some very fine and capable men. During my three years as Vice-Speaker, Doctor Ken Johnson was the Speaker of the House, and he taught me a great deal about motions, amendments, and amendments to the amendments — and also how to handle people who were partly or completely out of order. Ken Johnson and I had an exciting three years together.

During my eight years as Speaker of this House, I was also very fortunate to have the services of three capable colleagues as the Vice-Speaker — John Rice of Jackson — Harold Falls of Ann Arbor — and Lou Hayes of Gaylord.

I want to thank these men at this time for their able assistance and I am sure we are all very sorry that because of added professional responsibilities, they chose not to continue on as Speakers. This brings us up to the present, and the administrative affairs of this House are now in the very capable hands of Jim Blodgett, of Detroit, and Vern Bass of Bay City — I wish them continued success.

The Michigan State Medical Society is now 103 years old, and there are times when I feel that I have been a member all of those years — then there are many other times when I feel excited, rejuvenated, and highly enthusiastic about our present and future plans and programs.

There is, at present, an acute imbalance between demand and supply of physicians to serve the ever-increasing population of our urban areas. Medical schools are attempting to face this problem by increasing the number of admissions to medical schools and also by making certain changes in their curricula. We also know that an increase in the supply of physicians alone will not solve the dilemma. We see an imbalance in our physicians' pool because of the increase in the number of young physicians who are choosing research for their major interest, so this obviously affects the supply available for patient care. Another reason for the shortage is that about 10% of licensed physicians in this country are now working in the armed services or in administrative positions.

The answers may come by developing greater utilization of the allied health scientists and other paramedical personnel — and with the increased popularity of so-called "group practice" to decrease the strain on individual practitioners.

There is going to be more and more impersonalization of patient care, and this means that the traditional face to face confrontation of patients with physicians may be on a limited basis in the future.

One of the matters of great current interest to the Michigan State Medical Society is its relationship with the Negro physicians in this state, and this, I believe, is a major challenge and should be squarely met with the indorsement of a coordinated, bilateral program to improve our communications with the Detroit Medical Society and the National Medical Association. Negroes constitute 11.4% of the nation's population, but have only 2.2% of the nation's physicians. According to a recent report released by the American Association of American Colleges, approximately 300 Negro students are expected to enter United States medical schools this fall. This represents a 50% increase over the situation five years ago.

The majority of Negro physicians have felt that the American Medical Association did not have a realistic motivated program to assure better care for Negro patients and did not fully comprehend the professional load that the Negro physicians of this country were carrying in attempting to take care of the great number of Negro patients. The difficulties that some Negro physicians have had in gaining hospital staff appointments is well-documented, but this is also true of some white physicians.

Negroes have served in the Volunteer Physicians for Vietnam Program — They have served in the Armed Forces Medical Corps — and have served aboard the steamship Hope and have actively participated in many local and national health programs. Michigan was recently honored by having Doctor Lionel Swan as President of the National Medical Association, and Doctor Swan is a member of our State Medical Society.

Another milestone in this area of interest, was the action of the American Medical Association House of Delegates in amending their Bylaws so that constituent societies might have their charter revoked if found guilty of racial discrimination.

The importance of the entire problem was highlighted at the recent annual meeting of the National Medical Association where President Lyndon Johnson put in a surprise appearance and spoke to their House of Delegates.

Specifically, I would suggest that state and county medical societies re-evaluate their interests in programs affecting the medical care of both the black and white poorer segments of our urban areas particularly, and make every effort to improve the professional relations of Negro physicians in all areas of health activities.

I feel, however, that Negro physicians themselves should make a greater effort to participate in county and state medical societies' programs and activities so that we can eventually eliminate any racial inequities that may now exist.

The education of the physician is an endless process — and we should continue to encourage medical education at all levels beginning in the medical schools and continuing through all postgraduate levels into specialty societies and hospital education programs. We now have three medical schools in this state and their postgraduate programs are of the highest caliber.

We should also continue to support the activities of the state and local health departments as their activities many times overlap with our own health programs concerned with direct patient care. Another matter of major concern is the care of the older people who are chronically ill. We must see the older patient as one of the great challenges in medicine rather than a candidate for custodial care. First class care for older people will lead to improved, preventive measures for younger ones. This frequently involves participation of county, state and federal programs, but this is going to be an expanding area of activity in the years ahead and the medical profession must concern itself in cooperating with and giving direction to public agencies.

The scientific progress of medicine — its skyrocketing per diem costs in hospitals — and the mounting shortages of personnel to deliver high quality medical care are causing far-reaching changes in the traditional doctor-patient personal relationship throughout the whole spectrum of health service. The benefits of latest medical techniques can be delivered only through the inter-action of many specialists, and that in itself inevitably introduces an element of impersonality in the way the patient is treated.

It is fashionable in some quarters to level a constant barrage of criticism at physicians. Doctors are blamed for all the ills of society from juvenile delinquency to air pollution. This is both unjust, unfair and not based on the facts. The so-called "image" of the physician is still considered to be the highest and best of the professional and nonprofessional groups. American physicians should be congratulated on their outstanding cooperation with the "Medicare" program. The medical profession, with rare exceptions, has accepted the verdict and has worked hard to make the Medicare program an outstanding success.

The new direction in which American medicine is going is not necessarily bad because it is different. William Osler wisely said: "The philosophies of one age become the absurdities of the next, and the foolishness of yesterday has become the wisdom of tomorrow."

Let us hope that in the year ahead, that we, as physicians, will continue to give the best medical care possible to all segments of our population. The changes we are seeing in medical practice and hospitals are medical expressions of the same changes that will occur in education, industry, government and in the entire social landscape.

The transition of our medical care system simply mirrors the transition of our whole society. Let us hope that this transition will bring some degree of stability — and perhaps, some degree of tranquility.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, noted that Dr. Lightbody had many constructive programs planned for next year and approved of his suggested courses of action.

THE HOUSE adopted the report of the Reference Committee.

9. Address of Woman's Auxiliary President — Mrs. W. G. Gamble, Jr., (extracted)

Our component auxiliaries are small and large, social as well as service organizations, but all have a common denominator — members have demonstrated their concern for people and their communities by participation in various medically oriented projects.

Priorities stressed this year were: Legislation, Health Careers, AMA-ERF, and a new committee, Home Centered Health Care. With an overall concern for membership, there was an increase of 85, bringing the total to 3,566 members. By supporting various fund-raising activities, the counties have continued their support of the American Medical Association Education and Research Foundation with a total contribution of $20,964.82. Macomb County received an achievement award at the National Convention — the third such award this County has received.

One of the first states to appoint a Home Centered Health Care Chairman, we are proud to report our own county, Bay-Arenac-Iosco, initiated a Mobile Meals program on April 1.

Over $18,000 for scholarships and loans for paramedical careers — over 50 Health Career Clubs in the State — 11 Health Career Days sponsored by auxiliaries indicate the response to the challenge in Health Careers. The Careers Mobile toured again in some counties with members assisting as guides or in whatever capacity requested.

International Health Activities again proved to be a popular project, with approximately 30,000 pounds of pharmaceuticals and equipment collected for various outlets, with World Medical Relief the main beneficiary.

With the assistance of MSMS, the Auxiliary held its first Legislative Day in March. In addition to State officers and chairmen, all county presidents, presidents-elect and legislation chairmen were invited to the day-long program which began at MSMS headquarters under the direction of Mr. Riley. Then, a trip to the Capitol where appointments had been arranged for each Auxiliary member to meet with either her representative or senator. This informative program was exceptionally well received, and attending members feel better prepared to assist physician husbands in influencing good legislation in the Health field.

Community Health's large umbrella has covered a wide range of programs: The film, "Parent to Child About Sex," has been extensively shown; assistance with immunization clinics, Headstart programs, and distribution of Health Education materials, *Today's Health* and *Health Guide*. Interesting safety programs have been on "Flammable Material," "Air Pollution" and "Self Defense."

We look back over the year with pride in the many accomplishments of our county Auxiliary members. Necessarily, we must add, wistfully, our wish for more active members.

Communications always seem to be a roadblock. Do you know what the Auxiliary is doing in your community? Have you invited your county auxiliary president to report at an executive committee meeting of the county medical society? Are you personally in favor of your wife actively working in the Auxiliary? We hope the above will be answered in the affirmative.

The Auxiliary is an organization whose goals and objectives have been clearly defined. Our main purpose is to assist the MSMS in its program for the advancement of medicine and health education. We can only fulfill our objectives with your total support.

We have kept our membership informed with our State newsletter, *The Auxilium,* issued quarterly. In addition, the pages of *Michigan Medicine* contained five articles about Auxiliary participation in activities we thought would be most interesting to physicians.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, noted the many accomplishments of the Auxiliary and commended it for its activities during 1968.

THE HOUSE adopted the report of the Reference Committee.

10. Remarks of Michigan State Medical Assistants Society President — Mrs. Nelda Gasperson (extracted)

The Michigan State Medical Assistants Society is again well represented on the national level this year. Mrs. Betty Lou Willey was elected Speaker of the House and is candidate for this office this year. Several MSMAS members serve on AAMA committees. These include Mrs. Dorothy Brandis, member of the Resolutions Committee, and Miss Donna Hislop, CMA, a member of the Certifying Board. Miss Phyllis Marquardt, CMA, and Doctor Millard assisted in an approval program of the Medical Assistants Course at the Traverse City Junior College on behalf of the AAMA.

In November, 1967, the County Officers and Committee Chairman Conference was held in Lansing with a total registration of 121 members.

Miss Phyllis Marquardt, CMA, Public Relations Committee Chairman, represented MSMAS at the Silver Anniversary meeting of the Michigan Health Council. The Eleventh Annual Educational Seminar was held in Flint with an attendance of 150. Mayor Floyd J. McCree of Flint welcomed the group and proclaimed April 21 as "Medical Assistants Day."

Our Summer Seminar was held at Boyne Highland Lodge with 180 registered — the largest attendance ever for a Summer Seminar. This meeting was hosted by the Washtenaw County Medical Assistants Society.

Membership in MSMAS as of June 30, 1968, is 752, an increase of 13 since June 30, 1967. Gratiot County will be presented with its organizational charter this year and if Barry County has had its Constitution and Bylaws approved it too will receive its charter.

Our Bulletin, published quarterly, was awarded first place in the AAMA annual award contest in 1967.

A grant of $500 from The Council of MSMS to our Education Committee was gratefully acknowledged. This grant will aid the committee in establishing a survey of community colleges and subsequent standardization of medical assistants training programs offered by the colleges.

Many thanks are directed to MSMS for the use of the headquarters for our Board of Directors meetings and to our advisors G. E. Millard, MD, F. C. Cretsinger, MD, W. T. Davison, MD, and B. H. Alford, MD, for their direction and advice.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, praised the activities of the Medical Assistants and recommended approval of the President's Remarks.

THE HOUSE adopted the report of the Reference Committee.

11. Progress Report on the MSMS Judicial Commission — D. N. Sweeny, Jr., MD, Chairman

The Commission has met quarterly and on call for emergency matters. I would like to discuss only six of the problems which we have dealt with in the past 12 months.

1. *Election of Councilors.* The Commission spent much effort on problems concerning eligibility for membership on The Council of the Michigan State Medical Society. This problem stemmed from a complaint received by the Commission shortly after the last session of this House when previously established rules were changed. The action and recommendations in this regard of the local county society were reviewed and accepted by the Judicial Commission.

The Commission has concluded that the chief cause of this misunderstanding and other misunderstandings involved in such matters stems from the cumbersome mechanism by which Councilors are elected. We have suggested therefore, Mr. Speaker, that it would be advisable to amend pertinent sections of the Constitution and Bylaws of the Michigan State Medical Society anent the election of Councilors. It would seem more appropriate that Councilors be nominated and elected by the physicians of Councilor districts whom they represent, rather than by the House of Delegates as a whole. Your Judicial Commission clearly recognizes that it has no authority over the operation of the House of Delegates. We do feel, however, a deep obligation to the Society in the prevention of future complaints and serious misunderstandings of this type.

2. *Handling of Complaints by Component County Medical Societies.* The Commission is pleased to report that county societies are doing an excellent job in their handling of the complaints that are forwarded to them from the Commission. As you know, it is the policy of the Commission to have all complaints resolved at the local level whenever possible. A subcommittee of the Commission is now preparing guidelines to be used by county societies in the investigation and determination of complaints. These guidelines will be completed and sent to all county societies.

3. *Closer Liaison with the State Board of Registration in Medicine.* Your Commission has an active subcommittee working on the problem of the physically or mentally incompetent physician. We have had dialog with the State Board of Registration in Medicine in an attempt to develop safeguards so that both the public and the profession will be better protected from anyone being allowed to practice medicine in this State who is not qualified physically, mentally or professionally.

4. *Physician-Hospital Relationships.* Your Judicial Commission is deeply disturbed by the increasing number of squabbles that mar the otherwise harmonious relations between hospital administrations and the medical staffs. The Commission was helpful in resolving a serious problem that had developed in Detroit in this context. We understand a resolution dealing with this subject has been introduced at this session of the House of Delegates, and we urge its most serious consideration by the delegates.

5. *Relationships Between Doctors of Medicine and Doctors of Osteopathy.* The Judicial Commission rendered an additional opinion to a local county society that it is ethical for a doctor of medicine to associate in practice with a doctor of osteopathy providing the osteopath in question practices scientific medicine. As you know, this opinion is consonant with the opinions of the AMA Judicial Council and the MSMS policy concerning doctors of osteopathy that was established by the MSMS House of Delegates in 1964.

Our opinion, however, contained an important proviso that all information reaching the public regarding such an associate must clearly indicate that he is a doctor of osteopathy and not a doctor of medicine.

6. *The Ethic of Incorporation by Physicians Under the Michigan Professional Corporation Statute.* Upon request of a county medical society, the Commission has proclaimed that professional corporations are ethical, since

such associations are covered under an earlier determination of the AMA Judicial Council, and that it is within the realm of ethical propriety for physicians to join together in partnerships, associations, and other lawful groups, providing that the ownership and management of the affairs thereof remain in the hands of licensed physicians.

I will not detail any of the further complaints that have come before your Judicial Commission.

Mr. Speaker, the Commission's work would not be possible without the help of our staff coordinator, Mr. Richard Campau. Because of the implications of due process and abrogation of the right to earn a living in many of the complaints received by the Judicial Commission, we could not function nor do we intend to try to function without the personal guidance of our Legal Counsel, Mr. Stewart Kerr. I am privileged by my position as Chairman of the Judicial Commission to publicly thank these gentlemen for their help.

I speak, Mr. Speaker, for your Judicial Commission, composed of the following doctors: Harold Furlong, Vice Chairman; Sherman Andrews; Louis Bailey; Norbert Scholle; Robert Hamburg; Willis Huron; Robert Powers; R. W. Teed, and Hugh Fuller.

THE SPEAKER stated that this was a progress report of the Commission for information and would not be referred to a reference committee.

12. Report of Michigan Delegation to the American Medical Association — Luther R. Leader, MD, Chairman

Doctor Leader summarized a 15-page printed report on the June meeting of the AMA which had been distributed to the Delegates in advance.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, complimented the Delegates on their work and received the report for information.

THE HOUSE adopted the report of the Reference Committee.

13. Remarks of Michigan Medical Service Board Chairman — John M. Wellman, MD

The report of Michigan Medical Service consists of three items:

1. The Michigan Medical Service Report of 1967, which is contained in your Handbook under the title "Program for Progress," was mailed to each physician in the State of Michigan in the spring of 1968. This covers in detail our activities for the year 1967.

2. Included in your Handbook is our Annual Report to The Council and the House of Delegates as of this date. In essence this consists of a resume of the reports which we have made periodically to The Council since the last meeting of the House. It also summarizes our operational activities for the first six months of 1968. It includes actions taken on resolutions adopted by the House of Delegates in 1967 which were referred to Michigan Medical Service, and finally some comments about the future role which prepayment plans will play in the field of medical economics. (Reprinted below)

3. In support of this report for the first six months of 1968, you have received today a pass-out reiterating the basis for payment under the Michigan Variable Fee Program and an explanation of the determination of reasonable charges.

We appreciate the opportunity to present these reports for your consideration.

14. Annual Report of Michigan Medical Service — John M. Wellman, MD, Chairman; John C. McCabe, President

The work of Michigan Blue Shield in 1967 was outlined in our report to The Council and House of Delegates in September, 1967. Details were published this spring in the Annual Report, entitled "Programmed for Progress."

The latter report reflected Blue Shield's continuing growth and highlighted the finalization and preparation for implementation of the Variable Fee Program.

The year 1967 was one of progressive change as well as of productive Blue Shield activity. It was characterized not only by significant enrollment increases in regular programs and the number of Michigan citizens served under government programs, but also by an increase in claims submissions due primarily to Medicaid, which nearly doubled its total volume of 1966.

This present report is intended to inform The Council and the House of Delegates concerning Blue Shield activity from January 1, 1968, through June 20, 1968.

The MVF Program

The most significant and concerted effort of the first half of '68 concerned the finalization of our planning and implementation with respect to the new Michigan Variable Fee (MVF) Program.

In addition to many operational activities, both internal and external, this implemental process involved consideration of the reaction and the degree of satisfaction of the publics served by Blue Shield, both professional and consumer. On the professional side it meant describing and explaining the new payment mechanism which involved not only higher payment levels but understanding and acceptance on the public's part.

The slow rate of participation especially among M.D.'s continues to be of concern. While the overall percentage of physicians in the State who participate with Blue Shield rose from 56.4% in January '68 to 65.7% as of June '68, the rate of growth on the part of the medical profession has lagged behind other participating professions. As an example, M.D. participation went from 60.6% to 61% for this period, while participation by Osteopaths went from 44% to 67%.

There is satisfaction, however, and significance also, in the fact that the first six months of '68 has seen a marked reduction in the number of resignations by participating physicians. For instance, only two physicians resigned during the month of June.

Enrollment

The groundwork for the MVF enrollment effort was laid in the summer and fall of 1967.

At the end of June, 1968, and prior to formal presentation of the MVF Program to the general public, 20,265 MVF contracts were put into effect, representing 286,260 members. This number did not include major accounts scheduled for conversion to MVF following the June 30 date.

Despite the increased costs which occur in some cases currently and the prospects of higher costs in the future, public acceptance of the program has been most gratifying.

Including individuals with Complementary coverage, over 3,500,000 people or 80 percent of Michigan Blue Shield's membership will be under the MVF programs by the end of 1968.

Charge Patterns

The Blue Shield benefit program for Steel Groups in August, 1967, was the first Michigan program to employ the "customary and prevailing" concept of fees for providers.

Between August, 1967, and April, 1968, there were several adjustments in screen levels under the Steel, Uniroyal, and other reasonable, customary, and prevailing fee type programs, including government programs administered by Blue Shield. These adjustments were applied to the prevailing screen data developed for upcoming MVF procedures during the first half of 1968.

The use of MRVS as a measuring and screening device for reasonable charge determination is slowly being reduced as charge patterns develop with more clarity under all programs administered by Blue Shield.

The Physician's Manual

Because of the complexity of the changeover from M-75 to the new MVF Program and the new systems and procedures which the latter required, a complete revision of the Physician's Manual was undertaken early in 1968.

The new manuals were distributed to all physicians in June, 1968. They incorporated materials and information designed to ease program transition.

The manuals include new procedure codes for MVF, plus a greatly simplified Doctor's Service Report form, together with appropriate instructions and illustrations relative to their use.

The new systems and procedures are aimed at achieving a complete integration of claims and payment procedures into Blue Shield's computer and data processing operations.

To further standardize all aspects of communications to the medical profession during and after the period of transition, the Doctor's Record was also revised completely. It was changed in size, format and typography to permit its inclusion in a special section of the Physician's Manual. The new Record, first issued in June, 1968, was designed as a primary vehicle for updating the profession about changes in benefits, procedures, and other program content.

National Account Program for Auto Groups

A major task during the final six months of 1967 and through the first half of 1968 was the development and implementation of a master control plan for the National Account Program for Auto Groups.

While activities in this regard are continuing, the following is a summary of actions through June 30, 1968:

The Master Operating Agreement was executed with Ford and Chrysler, and that for General Motors is in the process of final execution.

Plans representing the majority of Auto enrollment for Ford and Chrysler nationally signed or were committed to sign Participating Plan Agreements. Local Blue Shield Plans will be asked to sign the Participating Agreements for the General Motors account following execution of its Master Operating Agreement with Michigan Blue Shield.

Final evaluation of the Participating Plans' Physician Payment Programs, as measured against Blue Shield's acceptable criteria, was initiated.

The Michigan Blue Shield and Blue Cross Administrative Manual was distributed in accordance with the Collective Bargaining Agreement.

The program will be effective November 1, 1968.

Other Highlights

By the end of June, 1968, regular Blue Shield programs had an enrollment of 4,567,900 members. This was an increase of nearly 365,000 over membership levels in the same month of 1967. As Blue Shield entered the second half of 1968, the corporation was servicing more than 5,536,000 people in all programs, or 63.6 percent of the state's population.

The growth of Blue Shield's activities is further reflected in the corporation's financial condition at the end of June, 1968. Assets were $91.1 million, up 12.3 percent from the same date in 1967. Liabilities for the first six months of 1968 were $36.1 million, or 1.5 percent higher than the same period in 1967.

While reserves for the first half of 1968 grew to $54,961,849, the rate of growth has decreased. In the last half of 1968, the reserves are expected to be lowered as the new MVF Program is implemented and rate credit reflecting our stable financial situation takes effect.

To keep pace with the increased volume of regular and governmental business, Blue Shield increased its employee rolls to the 1,343 mark, or more than 33 percent over June, 1967.

On January 31, 1968, the Board of Directors modified existing Master Medical programs to complement the new MVF concept. At the same time the Board authorized the marketing of MVF-1 and MVF-3 Programs to Non-Group Conversion subscribers.

The administration of the Wayne County PRESCAD drug program for pre-school and adolescent children was undertaken with the approval of the Board.

Jointly with Blue Cross, Blue Shield agreed to underwrite the Major Medical (Supplemental) benefits of the Federal Employee Program. Effective July 1, 1968, the high option program, which enrolls the vast majority of those eligible, began to be administered under the Variable Fee payment mechanism, i.e., customary and prevailing, rather than fixed fee allowance.

Management implemented plans for construction of the new Blue Cross - Blue Shield service center.

Total claims submissions in all programs were 3,733,459 for the six month period. Of this amount, on a monthly basis, actual gross receipts during the period were ahead of forecast. It is anticipated that Blue Shield claims from all programs will be in excess of 8 million at the end of 1968. Regular claims receipts during the first six months of 1968 totaled 1,857,840, an increase of more than 47,500 over total claims receipts during the same period in 1967. Medicare produced 872,000 claims during the first half of 1968, indicating a 50 percent increase in such claims over 1967. Medicaid claims amounted to 1,003,619.

Benefit payments for all programs during the first half of 1968 were approximately $108 million. Of this amount $66.5 million was disbursed under regular programs, $22.3 million under Medicare, $14.8 million under Medicaid, and $4.1 million under BS-65 complementary.

Administrative Improvements

Processing time for Medicare and Medicaid claims has been substantially reduced within the past year, and particularly during the first half of 1968.

One reason for this reduction is that more physicians (approximately 68 percent during the first half of 1968) are now accepting assignments. Additionally, fewer bills are being returned because of incomplete or inaccurate information.

About 90 percent of the assigned claims are being paid within 14 to 21 calendar days after they are received.

In addition, a computer tape listing Medicaid eligibles — furnished monthly by the state of Michigan — is easing the task of verifying recipient eligibility.

Moreover, as Blue Shield experience under these programs has increased, we have been able to refine operational techniques suited to program needs and to clarify the multitude of state and federal regulations by which they are governed.

Other Refinements

Other refinements to further reduce processing time for Medicare and Medicaid claims include:

Improved training of Blue Shield staff, greater attendance of medical assistants at Blue Shield meetings around the state, and the submission of more accurately prepared claims.

The installation of a special electronic unit to permit direct-line computer communications with Social Security Administration headquarters in Baltimore and Blue Shield's resultant capability of receiving a response to data within 24 hours of its transmission to SSA.

Industrial engineering modification of Blue Shield claims processing systems and procedures, installed earlier this year, permits a greater degree of control over claims processing despite substantially increased volume.

Plans were finalized for the introduction of plastic ID cards to allow for simpler and more accurate eligibility identification, with implementation to be effective late in 1968.

Management has established a special Systems Evaluation Group whose purpose it is to react to future identifiable growth patterns. For example, a claims volume of over 10 million is forecast for 1969, and nearly 20 million by 1970.

While Blue Shield is adjusting to this enormous increase in volume, it will also be expected to keep its administrative costs at minimum levels.

This combination of needs has already underscored for Blue Shield management the necessity of designing a comprehensive "system" which will be flexibly responsive to this accelerated growth and will result in improved performance, in terms of service and costs, in all aspects of our business.

The Group's objectives are to reduce claims processing costs, shorten processing time requirements, simplify claims handling, increase claims accuracy at their origin and during processing, and establish positive processing control guidelines.

Particular attention is being given to a more sophisticated method of data transmittal from the point where care is rendered so as to reduce paper work outside of Blue Shield as well as within its structure.

Blue Shield has structured and staffed a new Medical Affairs Division which provides, for the first time, a divisional level source for staff support to management on matters affecting medical involvement.

Utilization Review Research Project

Since the inception of this project in 1967:

The project is now fully staffed and has moved into an operational phase following its initial research activity.

Activities undertaken and implemented during the first six months of 1968 include a pilot study to determine the feasibility of accumulating research data on a subscriber or user basis . . . . the beginning of analysis and programming to build a research tape record . . . . compilation of a history tape, based on selected data from the period 1959-1967, to provide a base for comparing past patterns and profiles for use in future studies.

This project is divided into three phases:

First, it will develop and demonstrate the use of computer screens for selecting cases for review by peer groups in hospital and medical settings.

Second, it will undertake the statistical development of pattern analyses and profiles from routine claims data for use by physicians and other providers.

Third, it will involve special research study projects, suggested by the Utilization Medical Advisory Committee, which will be helpful to the medical profession.

Utilization review activity, in particular the research project, leans heavily on advisory talent of both the professional and technical type.

House Resolutions: Blue Shield Actions

While many of the resolutions adopted by the House of Delegates in 1967 were of specific interest to us, only the following required Blue Shield action:

Number 32 concerning, "Participation in Michigan Medical Service:" This resolution was reported to the Blue Shield Board of Directors in July, 1968. A study is now under way to determine the effect of per case participation on the overall participation program. Until the study is completed, action on the resolution would be premature.

Number 33 concerning, "Blue Shield 'Action Line' for Medicare-Medicaid Cases:" Michigan Blue Shield's reaction to this suggestion occurred in the fall of 1967. A special handling section was established for the processing of status inquiries. The staff of the Personal Services Department was increased to render better service, and the number of Professional Relations and Telephone Service representatives was increased. In April, 1968 a new, modern Telephone Service area was constructed in the home office to speed internal handling of physician's calls. In addition, a member of the Public Relations staff was assigned to coordinate the handling of especially urgent or sensitive inquiries, and to expedite their processing in cooperation with other Blue Shield departments.

Number 36 concerning, "Proposed Blue Shield Benefits for Sterilization." This resolution was studied by the Medical Advisory Committee throughout the first six months of 1968. It recommended the inclusion of male and female sterilization, on an inpatient basis only, in the surgical benefits of the M-75 Program. This recommendation was approved by the Board of Directors at its meeting of July 19, 1968.

Audits and Reviews

The degree to which Michigan Blue Shield is susceptible to auditing and review of its business operations and activities by a variety of external agencies is not commonly known. Yet, figuratively speaking, Blue Shield's business is pursued in a fishbowl-like environment and is subject to continuing official scrutiny.

External audits are conducted on a regular basis under nine different program headings which cover comprehensively all aspects of the corporation's program activities. Separate audits are aimed at program areas in which Blue Shield functions jointly with Michigan Blue Cross.

These auditing agencies include the Social Security Administration and the Medical Services Administration, both of the Department of Health, Education and Welfare, Michigan Department of Social Services, Federal Civil Service Commission, U.S. Army - Defense Contract Audit Agency, Internal Revenue Service, Project PRESCAD officials, the Wayne County Board of Auditors, auditors representing various Employer Groups, the National Association of Blue Shield Plans, and Blue Shield's prime regulatory agency, the Michigan Bureau of Insurance.

In addition, analyses are underway by the State Legislature with respect to Medicaid costs.

The type and scope of audit involved varies from an examination of balance sheets and statements of operations, covering all operational phases, to the specific auditing of administrative expenses, building occupancy costs, rate increases, and the testing of claims payments to physicians and the determination of reasonable physician charges.

During the last six months of 1967 and the first half of 1968 we were audited or reviewed formally on ten different occasions by agencies or organizations indicated above.

This was in addition to audits performed routinely by Blue Shield's own external auditors and its internal audits department. Also, innumerable informal visitations have occurred from these and other agencies interested in our performance and techniques of administration.

Such accountability is a fact of business life to which Blue Shield management responds not simply with equanimity, but with increased awareness of its many responsibilities.

The Future

The medical economics climate continues to demand that Blue Shield demonstrate with increased effectiveness the viability of solutions of medical care problems achieved and planned in the private sector. Effective responses will not be possible without the positive cooperation of the medical profession, nor without equal support from the consumer, especially in dealing with the problems of medical care costs.

It is required that the improved performance of the voluntary prepayment system — the major target of the new Blue Shield Systems Evaluation Group project — become an increasingly preferable alternative to further and probably more far-reaching government involvement in the health care field.

In the months and years ahead both medicine and Blue Shield will be presented with new opportunities for growth and new challenges to undertake change.

The reasonable application of the variable fee concept and its prudent control are of vital concern to the future climate of medical economics and to the voluntary character of our involvement. This also involves heavy participation by the medical profession, both within the Blue Shield structure and outside it.

Michigan Blue Shield's Utilization Review Research Project, as it develops and refines new techniques and methods of utilization analysis, will provide the medical profession with valuable new tools for retaining initiative in this sensitive area.

New benefits — already negotiated in the auto industry, and to be followed by other groups, will begin to make an impact on Blue Shield activities in 1969 and in the 1970's.

Drug benefits, implementation of which will begin in the auto industry in 1969, will be gradually extended to non-autos groups beginning in 1970.

Only a limited marketing of the Home and Office program is now anticipated until 1972.

Assumed effective dates for implementing other new benefits — Physicals, Well Baby care, and Eye Refraction services — have been tentatively set to begin also in 1972.

We anticipate that in the five year period beginning in 1969 there will be a tendency for enrollment in nonmotors groups to rise at a higher annual rate than the auto groups, primarily because of changing employment growth patterns.

There will be changes, too, in Medicare and in Medicaid. Although the precise nature of these is difficult to foresee, it is to be expected that some switching of benefits from Title XIX to Title XVIII will occur.

While the impact of these probable changes cannot be known, we expect, in general, that overall growth of Blue Shield business will be reflected in increased payout to physicians and in the development of programs appropriately responsive to patient needs. We expect a growing negative reaction on the part of the public generally to rising medical care costs. We also anticipate greater difficulty in assuring the public that we are responding adequately to its concern about costs.

In view of these expectations, management is committed to focus its efforts even more positively upon those present realities and future needs of medical economics on which the overall effectiveness of Blue Shield programs must be based.

THE REFERENCE COMMITTEE on Health Insurance & Medical Services, R. E. Rice, MD, Chairman, noted that the report was comprised of the annual report of Michigan Blue Shield to the House of Delegates along with supplementary information in the form of the Annual Report for 1967 and the information contained in the handouts entitled "Michigan Blue Shield Variable Fee Payment Mechanisms."

The Committee recommends that the substance of this report be distributed to every physician in Michigan involved in health care and to any other interested party.

This report reveals a massive capacity to provide for monumental changes within a very short time. We can be grateful that this is so. Furthermore, we can expect that this capacity will be sufficient for greater requirements that obviously will be present in the future in the payment mechanisms for providers of health care.

The Committee would like to convey its impression that corporation has responded well to the needs of the patient in a manner compatible with the ethos of the medical profession.

Our Committee feels these reports should be received enthusiastically for information.

THE HOUSE adopted the report of the reference committee.

REPORTS OF THE COUNCIL

15. Remarks of the Council Chairman — Robert J. Mason, MD

The Annual Report of The Council in your Delegates Notebook outlines major areas of concern and the action taken by The Council in exercising its leadership responsibilities. My remarks today concern pertinent actions of The Council since the report was printed. In addition, I will make some personal observations and will call upon Finance Committee Chairman Whiteley and Treasurer Ylvisaker for some comments.

As you are aware, the full Council meets eight times a year in regular session, with special sessions as necessary. An MSMS Councilor spends approximately 17 days each year on Council business.

The Council reviews minutes of all committees and takes definitive action on them, as well as reviewing the annual summaries of these committees. Because The Council is a large group and many of the matters coming before it require detailed study, The Council is organized with three standing committees: Finance, with Robert K. Whiteley, MD, Detroit, as Chairman; County Societies, with John J. Coury, MD, Port Huron, as Chairman; and Publication, with Brooker L. Masters, MD, of Fremont as Chairman. These three Committees serve as pre-study or reference committees; they make recommendations to The Council on items referred to them. I only outline this to emphasize the fact that detailed study and deliberation is given to every action of The Council.

The Council also is aware of the concerns of the individual members of MSMS, the component societies and specialty organizations composed of MSMS members.

I need not outline for you, I am sure, the many continuing problems facing medicine. The House of Delegates, as you know, sets the policy on these matters and The Council implements policy on a month-to-month basis.

Last year, and for several previous years, the House of Delegates instructed The Council to develop a model Single Medical Practice Act. This model Act was developed by the Legal Affairs Committee; copies have been sent to the delegates and to The Council.

The Council makes no recommendation to you regarding its adoption, but wishes to remind you that this is a highly technical document and requires thorough study so that the implications and ramifications of the rather precise language are fully understood before this House adopts or amends the proposed Single Medical Practice Act. I am sure you will seek the advice of MSMS Legal Counsel, representatives of the State Board of Registration in Medicine and, of course, members of our Legal Affairs Committee during your deliberations.

Another matter of concern in recent years has been professional liability insurance. Last year, you will recall, The Council issued a white paper on this matter to inform the members of the growing problem of malpractice claims in Michigan. The situation, as predicted, has steadily worsened, to the extent that The Council instructed its insurance advisor to make a thorough study of the malpractice field and give his recommendations on what course of action MSMS could or should take.

Briefly, he recommended that MSMS consider initiating a Society-sponsored professional liability insurance plan. The Council instructed the Professional Insurance Committee to thoroughly investigate this proposal and to present its recommendations to The Council. The report of the Committee, which was received by The Council yesterday, is as follows:

Special Report on Professional Liability Insurance

As instructed by The Council this Committee has investigated the proposed program of MSMS-sponsored professional liability insurance as presented to The Council in July by Insurance Counsel Stratton and Employers' Group of Insurance Companies.

The Committee invited similar proposals from the 28 largest multiple life casualty companies of which 23 replied that they would not be interested in offering a sponsored plan. The remaining 5 companies did not reply.

Finally, discussions were held with representatives of the Employers' Group and the Medical Protective Company. Our investigation disclosed the following facts:

1. Approximately 80% of MSMS members are now insured by the Medical Protective Company.
2. Medical Protective has found it necessary to decline many new applications from Class 5 physicians (these include Anesthesiologists, Neurosurgeons, Obstetricians-Gynecologists, Orthopedists, Otolaryngologists-Plastic Surgery, and Plastic Surgeons).
3. Medical Protective has also found it necessary to discontinue the writing of physicians who practice in some remote areas of the upper peninsula.
4. Medical Protective is not interested in becoming involved in a MSMS-sponsored plan nor would it oppose any actions by MSMS to sponsor a plan with another carrier.
5. The A. M. Best Company, a well-recognized rating organization, shows a decline in the ratings of the Medical Protective Company as follows:

Year	Rating*
1964	A
1965	A
1966	B+
1967	B+
1968	B

*Best's highest rating is "A Plus" and this denotes a general policyholders rating of "Excellent." Ratings vary from "A Plus" (Excellent) to "C" (Fair). The ratings used herein were taken from the latest Best's Guide. A higher rating indicates greater ability to meet present and future obligations.

6. The Employers' Group of Insurance Companies has successfully engaged in a Florida Medical Association sponsored plan of Professional Liability Insurance since 1962.

   The experience of the Florida Medical Association with Employers' was thoroughly researched by Richard Campau, the Committee staff assistant. He reported that Florida Medical Association is extremely happy with the performance of Employers' Group especially in regard to the following points:

   A. Aggressive claims defense on a statewide basis.
   B. Excellent cooperation in claims defense through committees of the Florida Medical Association and its component county societies.
   C. Educational programs for physicians as to underlying causes of claims and how to avoid them.
   D. Premiums have been kept competitive with other carriers.
   E. No physicians have been denied coverage because of specialty or location of practice.
   F. Outstanding defense counsels have been retained.
   G. Employers' has maintained the plan on a sound experience rating basis.
   H. The Company has provided the Association with complete information concerning claims and settlements.
   I. The Employers' policy specifically states that professional liability includes service by the individual insured as a member of a formal accreditation or similar professional board.
   J. In addition to its basic professional liability policy, Employers' also offers an "umbrella" type liability insurance at a reasonable premium.

Based upon the above findings and other information the Committee has concluded as follows:

1. The policy proposed by Employers' is broader and meets the needs of MSMS members better than that issued by Medical Protective.
2. The A. M. Best rating of Employers' is A Plus whereas the same organization now rates Medical Protective as B. The higher rating of Employers' indicates its greater ability to meet present and future obligations. Employers' is an organization with assets of over 400 million dollars while Medical Protective has assets of less than 20 million.
3. Employers' would establish a close liaison with MSMS to work toward an improved medico-legal climate.
4. Employers' would vigorously defend groundless claims.
5. A much more stable market would be available from Employers' than now exists. There would be no rejections or terminations because of specialty, geographical location or age.
6. Premium rates offered by Employers' would be competitive to those of Medical Protective.

The Committee is not able to make any recommendations to The Council at this time because Employers' cannot provide a specific premium quotation as professional liability rate changes involving most carriers are pending with the Michigan Bureau of Insurance. It is the intention of the Committee to submit its recommendations just as soon as the premium situation has been clarified.

We do not have the information required to make a firm recommendation to this House at this time. Therefore, The Council recommends that the House authorize The Council to complete negotiations for an MSMS-sponsored program of professional liability insurance if it is determined that such a program would best serve the interest of MSMS members. Such authorization will mean that the House has expressed its approval of the general concept of a Society-sponsored plan and will leave the detailed negotiation to be conducted by The Council so that the plan can be instituted without waiting for another 12 months when this House will meet again.

Since the special session of the House of Delegates in February, The Council has supervised every detail of the implementation of the new Asset Management Plan. We have faithfully followed the plan as adopted by the House, and I believe the report of your Treasurer will be of extreme interest. The Council certainly compliments Treasurer John Ylvisaker for his devoted leadership.

As I have told you, one of the key committees of The Council is the Committee on Finance, chaired by Dr. Whiteley. Dr. Whiteley will present a brief picture of our financial condition and then will introduce Treasurer Ylvisaker. Following Dr. Ylvisaker's presentation I would like to make some personal remarks to the House.

ROBERT K. WHITELEY, MD: 1968 has not been the most stable year in our nation's economy, as I am sure your office practice indicates. It has been a difficult year for MSMS, too. The cost of doing business is up; income is up; increased expenses are outpacing income.

Fortunately, MSMS three years ago had the foresight to initiate a modern, efficient, intelligent money management plan which gives the Finance Committee and The Council the ability to exercise rigid budget controls. The effectiveness of this plan is evidenced by the fact that actual expenses last year were within 1 per cent of budget. The Financial Structures Committee of the House has made a thorough study of our financial condition and a copy of that report has been distributed to you. We have projected our budgets for 1969 and 1970 and the results of those projections are in the Financial Structures Committee report.

I don't believe I should in a verbal report such as this give you just a bunch of figures. I will be prepared to discuss any detail of the budget and our income statement at the reference committee meeting. I do want you to know, however, that the Finance Committee and its professional consultants are prepared to meet the Internal Revenue Service regulations regarding the reporting of *Journal* advertising income. We believe that the formula for allocating expenses and income, developed for us by the Alexander Grant Company, is adequate to meet IRS demands. We are similarly prepared following the publication of guidelines for reporting exhibit income.

Now I would like Dr. Ylvisaker to give you more details about the Asset Management Plan.

Report of the Treasurer

My report this year is in two major parts and concerns itself with:

I. The Asset Management Program adopted by The House of Delegates in Special Session, February, 1968.

II. The financial condition of MSMS.

Part I

In brief review, the new Asset Management Program adopted by the House authorized the following:

1) Mortgaging of the MSMS headquarters building in an amount up to $650,000 at 6¼% interest, 25 year term, free of mortgage fees and prepayment penalties.

2) Application of the resultant monies a) to eliminate short-term line-of-credit borrowing for operational expenses, b) to increase existing reserves of $125,000 to $250,000 and thereby to establish a permanent Capital Reserve Fund with specified guidelines for use and maintenance, and c) to establish a Capital Protection and Creative Reserve Fund with the balance of the proceeds, the purpose of which would be to provide funds for other-than-ordinary services to the Society and for creative Society projects consonant with the stated aims and objectives of the Society.

3) Establishment of a Board of Managers consisting of five members with authority to invest and manage the Capital Reserve Fund and the Capital Protection Fund, subject to basic control by The Council.

4) Investment of funds as follows:
    a) Capital Reserve Fund — 50% in fixed dollar maximum yield money instruments and 50% in high grade negotiable securities to provide stability, income and conservative growth.
    b) Capital Protection and Creative Reserve Fund — 100% in bona fide investment vehicles to provide growth within the limits of sound fiscal judgment and income appropriate to such growth.

Subsequent to this authorization, The Council and your Treasurer proceeded with the implementation of this plan. The mortgage was closed with the Michigan National Bank in March. The Council then established a Board of Managers consisting of five members:

John R. Ylvisaker, MD, MSMS Treasurer	Term 1 year
Robert K. Whiteley, MD, Chairman, Finance Committee	Term 1 year
Ross V. Taylor, MD, physician representative	Term 1 year
C. Allen Payne, MD, physician representative	Term 2 years
Thomas H. Wagner, investment counselor	Term 1 year

The Board of Managers met on four occasions to transact necessary business including:

1) The establishment of a specific and objective format of operation.

2) The designation of Merrill Lynch, Pierce, Fenner & Smith, through its Institutional Department, to provide advisory service and act as official investment broker.

3) The investment of the $125,000 existing reserves in 6¼% certificates of deposit.

4) In May the investment of the first mortgage draw of $125,000 in a balanced portfolio of high yield stocks with conservative growth orientation to complete the requirements for the Capital Reserve Fund.

5) In late June, the investment of the second mortgage draw of $100,000 in growth-oriented stocks and high yield bonds to initiate the Capital Protection Fund.

6) The investment of the third mortgage draw of $100,000 in growth-oriented stocks in September to enlarge the Capital Protection Fund.

Procedurally, the Board of Managers reports regularly to the Finance Committee which, in turn, reports its findings and recommendations to The Council for information and action where necessary. Minutes of the meetings of the Board of Managers are open to both bodies.

At present the funds have substantial gains which provide the Society with additional security.

Part II

I should like to discuss the financial condition of the Society from two standpoints: the present and the future.

With the new asset management program we are in a period of transition and are converting to what might be called a budgeted, pay-as-you-go program for annual operations backed by actual reserves adequate to our present needs. Ignoring the intricacies of this transition, we are now operating within our actual income. For 1968, our income from dues and other sources covers our expenses with a modest surplus to apply on our previous borrowings.

Henceforth, however, we are bound by a budget. We may no longer finance increased expenses with unprogrammed line-of-credit borrowing. We must live within our income. To accomplish this, we must project our budgets, we must program our projects, we must tailor our expenses to fit our income or increase our income to cover increased expenses.

Without any dues increase, our income expands at a relatively predictable rate of 1% per year. Without any new projects, our expenses increase at an average rate of 4-5% per year. Our tentative projects for 1969 and 1970 confirm these rates. Therefore, with good management and no new obligations we can operate without an increase in dues for 1969. However, let me repeat and emphasize: If we embark on new programs or assume new financial obligations, the cost must be counterbalanced by 1) reduction of existing expenses or 2) an increase in dues. The amount of increase of dues will be in direct proportion to the costs incurred. With approximately 8,000 members a $10 increase can produce only up to $80,000.

As an individual, I am strongly in favor of our Society initiating and supporting aggressive, positive, imaginative programs to ensure the best quality of medical practice, the most efficient distribution, the most equitable regulation, and the most reasonable cost of medical care in the nation. To accomplish such objectives our Society must review the status of present programs to ascertain effectiveness and productivity in relation to cost. As your Treasurer, I recommend such action.

MSMS must also be prepared to finance new creative projects. The establishment of the Capital Protection and Creative Reserve Fund I sincerely believe will become one of the greatest forces in fostering and supporting such projects in the coming generation.

ROBERT J. MASON, MD:

You have all received a copy of the workbook, *Where We Stand*, 1968. Just as its predecessor did last year, this document challenges our interest by discussing the opportunities, responsibilities and problems of our profession in the changing environment in which we practice and in which our organization functions.

Earlier I told you that a Councilor spends an average of 17 days on Council business. Yet this does not truly indicate the extent of his participation. It does not reflect the study time, the thinking time, and travel to and from meetings, which eat into a daily schedule. But these elected officers of yours deserve special praise. As Chairman of The Council, I know just how important their contributions are. I express to them, the Councilors and officers of MSMS, my sincere appreciation for their leadership and cooperation during this past year.

Our leadership responsibilities are greatly facilitated by fine staff efforts. In addition to the staff's management function, our executive, senior and secretarial staff provides background and planning help for all MSMS committees, Council committees, House of Delegates and your officers.

I want to praise the members of this House of Delegates for its policy guidance in the past. I am confident that your deliberations today and tomorrow will provide appropriate policy to meet the problems that medicine faces today.

(HOUSE action on this verbal report follows the Annual Report of The Council, see page 22.)

16. Annual Report of The Council

PART I

Report of Council Activities

This section of the report contains a brief review of the activities and actions of The Council covering the period from September 1967 through July 1968.

Minutes of the regular meetings of The Council are distributed to component medical societies and members of the House of Delegates. In addition, abstracts of Council actions appear in *Michigan Medicine*. For this reason, the details of Council actions and decisions are not outlined in this review. Instead, The Council wishes to point to a few of the major achievements and problems in a general way.

MSMS Relationship with Blue Shield. The Council appointed an Ad Hoc Committee to Study MSMS Relationship with Blue Shield and asked it to recommend what future relationships should be. The Council adopted the committee's report in July.

The Committee recommended, unanimously and unequivocably, continuation of the present relationship between MSMS and MMS, and collected the following reasons in support of its recommendation:

1) The initiation of the service concept of prepaid medical care was made by physicians of Michigan. Though there have been many changes associated with the growth of MMS over the years, the basic philosophy behind this program seemed to the Committee to remain on solid ground. It is our opinion that, while admitting that areas of dissatisfaction do exist, as with any large scale operation, in general the consumer, the purveyor and the fiscal agent have cooperated to provide a workable, generally beneficial method for servicing and financing health care in Michigan.

2) The occasional situation which has led to concern for MSMS continuing its relationship with MMS has usually been due to faulty or inadequate information and communication and/or the changing format of coverage.

The Novy report of 1960 re-established certain fundamental relationships which had become distorted. Since that time there developed a lack of adequate liaison which ultimately led to the creation of this Committee. It is to be noted that recent efforts have been made by both organizations to rectify the deficiencies and an increased awareness has developed to support the idea that we are dependent on each other's good will. With this fact your Committee heartily concurs, believing that it is more imperative than ever to further this good will relationship — with the public good our greatest concern.

3) Quoting from written notes submitted by committee members, the following comments in support of the Committee recommendation are presented:

"The Board of Blue Shield . . . consists of public lay members and representatives of medicine." It "represents the interests of its three million or so subscribers and the physicians of Michigan who provide service to the subscribers . . . The board . . . is highly sensitive to the needs of the subscriber and to the needs of the physicians of Michigan."

"The public wants and demands voluntary health insurance. This includes individual groups and large purchasers of health care. It is here to stay."

"If the medical profession through Michigan Medical Service does not provide these services — a void or vacuum will be immediately created in this vital area of providing medical care."

(These) "basic groups, namely government, private insurance carriers and hospitals (via Blue Cross) or a possible combination of all three will take over the health carrier role and set fee schedules."

"There should be an ongoing continuing investigation of the economic relationships of Blue Shield and the Michigan State Medical Society and the future role of these in the practice of medicine in Michigan."

Finance. Inflation and the generally higher cost of doing business have had a limited effect on the MSMS financial picture. Fortunately higher costs have been partially offset by increased income. This plus careful control has produced a balanced budget in fiscal 1967 and a balanced budget is predicted for fiscal 1968.

1968 has been a changeover year, during which MSMS is embarking upon the new Asset Management Plan approved by the House of Delegates meeting in special session in February. Treasurer Ylvisaker, the plan's architect, has received the highest praise from The Council for his fine work in developing the plan and in implementing it following House approval. Doctor Ylvisaker will present details of the plan's implementation status in a direct report to the House.

It is impossible to know what the next budget year will bring. We can be sure of some inflation and higher costs, especially in services. The Council, as it develops its 1969 budget, will watch closely all planned expenditures and still maintain the required and desirable level of MSMS services.

Membership. Total membership in MSMS from 1935 to 1968 was:

Year	June 30	December 31
1935	3410	3543
1945	4425	4686
1955	5503	6109
1960	6660	6715
1965	7247	7563
1966	7296	7710
1967	7301	7858
1968	7617	

Liaison with Specialty Groups. Recognizing an opportunity to be of service to the various organized medical specialty organizations, The Council appointed an ad hoc committee to review these needs. The committee will make recommendations to The Council in the near future.

Streamlining of MSMS Committees. Upon the request of the House of Delegates Committee on Constitution and Bylaws, The Council is reviewing the necessity for continuation of some committees and considering the possibility of combining or eliminating the inactive committees. Currently under study is the possibility of enlarging the scope of the Public Health Committee to include disease problems that up to now have been the concern of separate committees.

Legal and Governmental Affairs

A significant portion of the deliberations of The Council at each of its meetings concerns matters directly related to activities of the legislative, executive and administrative branches of state government and to consideration of developments related to federal health programs or congressional action.

Several members of the MSMS staff constitute a "governmental relations" team which, heavily utilizing necessary socio-economic and legal consulting personnel, are responsible for keeping The Council currently informed of significant health developments in the public sector. Perhaps most visible to the membership in this general area is the work of the Legal Affairs Committee through its news organ, "Medigram," closely followed by the Governmental Medical Care Programs Committee which frequently prepares information for publication in *Michigan Medicine*. More detailed descriptions of the activities of both these hard-working committees are contained in their Summaries of Activities as presented to the House of Delegates.

Ongoing and important work is also done, however, by such liaison committees as those with the State Executive Office, the Board of Registration in Medicine, the Mental Health Committee, the Public Health Committee and numerous liaison committees with such groups as nursing, pharmacy, podiatry, etc., all relating to gathering information for Council review or implementation of MSMS program and policy.

"Governmental relations" constitutes a total activity which increases in complexity with the passage of time, not only because of proliferating programs in the health field but because of the concomitant necessity of constantly striving to improve relationships between medicine and its allies both in the health field and in the total state community. The MSMS legislative experience in the past year has been highly successful. In addition, as our "governmental relations" staff gains experience and increases its knowledge and contacts, MSMS is steadily improving its capacity to anticipate developments, work with appropriate officials, and guide programs along the lines of Society policy as established by the House of Delegates.

Comprehensive Health Planning. Last August Governor Romney issued an Executive Order creating the Comprehensive State Health Planning Commission, to be located within his office. This body closely parallels, in basic concept, recommendations previously made to the Executive Office by The Council and the Committee on Governmental Medical Care Programs. They advocated that a plan-for-planning group be formed to formulate plans for submission to the Surgeon General for implementing this program in Michigan. Chairman of the Commission is R. G. Rice, MD, Director of the State Department of Public Health. Charles Orlebeke, an executive assistant in the Executive Office, is Vice-Chairman. Other Commission members include William H. Anderson, MD, State Mental Health Director, R. Bernard Houston, Director, State Social Services; Glen S. Allen, Jr., State Budget Director. Mrs. Betty Tableman, formerly on the staff of the State Public Health Department in Planning, was appointed Executive Director in March, 1968. Mrs. Tableman will be working under the direction of the Commission with responsibility for a continuing planning operation to identify health needs, problems, objectives, and priorities and to make recommendations for allocation of funds. Full implementation of this program has not begun, due to the difficulty of the Executive Office in appointing the required Comprehensive State Health Advisory Council. The function of the Advisory Council will be to advise on the planning process; membership must include more than half consumer representation as well as voluntary groups, physicians, public agencies, general planning agencies, and universities.

Michigan Conference for Health Planning. A new meeting, the "First Annual Michigan Conference for Health Planning and Related Subjects," was sponsored by MSMS in Detroit in February, 1968. This Conference was designed to serve MSMS members by providing authentic information by experts in several fields. The Conference revealed MSMS leadership in the critical areas of legal and legislative affairs, and medical manpower and health care planning. Major subjects covered included: The Doctors, The Law and The Courts; Legislative Affairs; Health Planning as It Affects the Physician, Hospital and Community; Comprehensive Health Planning; MARMP — Heart, Cancer and Stroke; and Public Education through a Quackery Conference. The response to this three-day conference was good and tentative plans are to continue these seminars in the future.

Michigan Association for Regional Medical Programs. MSMS has increased its involvement in the important plans for implementation of the heart-cancer-stroke program through MARMP. MSMS continues to receive the dedicated service of Don Marshall, MD, an MSMS Councilor who is Vice-President of the Board of Directors of MARMP. This federal program has made notable progress in the planning process in education and training. It is intended to 1) identify regional needs and resources relating to heart disease, cancer, stroke, and related diseases, and 2) to develop a regional medical program which utilizes regional cooperation to apply and strengthen resources to make more widely available the latest advances in diagnosis and treatment of these diseases. A regional advisory group representing university medical centers, hospitals, practicing physicians, other health professionals, voluntary and public health agencies, and members of the consumer public, will play an active role in the development of the regional program and will approve applications for operation activities of this program.

Medical Economics

Annual Revision of Michigan Relative Value Study (1965). The Committee on Relative Value Study has made revisions in the Neurosurgery, Anesthesiology and Radiology sections of the Michigan RVS. These changes will be presented for final approval as part of the Committee's 1967-68 annual report.

The Committee will also recommend that its work be continued because the RVS is a valuable reference for physicians, especially with the growth of "variable fee" type insurance and prepayment health programs.

Long-Range Planning. This project of the Committee on Medical Socio-Economics is progressing. Position papers, in which experts describe the challenges, in their view, that medicine will face, are being published in *Michigan Medicine.*

The Council is pleased to report that Charles Hall's paper on the future of health insurance and prepayment was selected by a jury representing the American Medical Association, the American Medical Writers Association and the National Association of Blue Shield Plans as the most scholarly contribution to the literature of medical economics for the year ending June 30, 1967. Doctor Hall was presented the Norman A. Welch, MD, Award by the NABSP for his achievement.

After all the papers are published, the Committee will conduct workshops throughout the state to focus attention of component medical societies on the future. This activity is intended to stimulate the development of new MSMS approaches and programs to meet the challenges of the future.

Fee Survey in Wayne County. The Council approved a request from the Wayne County Medical Society for a survey of fees in Wayne County. Work on this survey has begun and the information obtained should be of significant value to physicians, not only in Wayne County, but throughout Michigan.

Courses on Medical Economics and Ethics. Lectures on medical economics and ethics were continued at the University of Michigan Medical School under the sponsorship of the Committee on Courses on Medical Economics and Ethics. This Committee will continue its efforts to initiate similar programs at Michigan State University College of Human Medicine and Wayne State University School of Medicine.

Adoption of New Blue Cross and Blue Shield MVF-2 Package Program. The Council on June 5, 1968, approved the recommendation of the Committee on Professional Insurance Plans that MSMS adopt the new Blue Cross-Blue Shield MVF-2 package. This program replaces the present M-75 and Over-65 group health programs now available to MSMS members. It offers an expanded scope of benefits and is effective as of August 1, 1968.

Improvements in the MSMS Group Disability Insurance Plan. Several improvements in the MSMS Group Disability Plan were worked out by the Committee on Professional Insurance Plans and the Provident Company. These include: a) reduction of premium for the lowest age group (under age 34), b) an increase in the available maximum indemnity from $500 to $1,000 monthly, c) an insurability guarantee provision, d) an extension of the disability benefit period for members under age 50 who become disabled because of sickness from age 65 to lifetime.

Disability Insurance for Employees of MSMS Members. This new group insurance program was developed by the Committee on Professional Insurance Plans. This plan is underwritten by the Provident Life and Accident Company and went into effect April 1, 1968. It provides monthly cash benefits for enrolled employees of MSMS members who become disabled because of accident or sickness. A choice of a one-year accident — one-year sickness plan or a five-year accident — two-year sickness plan is available.

Medical Problems of Disadvantaged in Cities. The Council feels a deep concern that all people have an opportunity to share in the American dream of being able to better oneself by individual initiative and hard work. To this end it has appointed a committee to identify any unmet medical needs that exist among the disadvantaged in our cities and to make appropriate recommendations for MSMS action programs to meet these needs.

Updating of Statement of Principles for Lawyers and Physicians. The Council approved a recommendation of the Liaison Committee with the State Bar of Michigan that the "Compensation for services of physicians" section of the present agreement between MSMS and the State Bar of Michigan be revised to state "it is the responsibility of the attorney to pay the physician a reasonable fee for services rendered" in cases where the physician aided in preparing a case. The Medico-Legal Committee of the State Bar is pursuing approval of this change by the governing board of the State Bar.

MSMS Sponsored Plan of Professional Liability Insurance. The Council, at its July meeting, directed the Committee on Professional Insurance Plans to investigate the advisability of MSMS sponsoring a professional liability insurance program, and to report prior to the next meeting of The Council. The Council pointed out in its directive that the Committee should have discussions with the Employers' Group of Insurance Companies, the Medical Protective Company and other carriers. This investigation is underway and a full report will be made by the Committee to The Council prior to its September 22 meeting. Any recommendation to the House will be presented verbally in the Chairman's Report.

Postgraduate Education

MSMS continued to provide many postgraduate educational experiences for its members while studying possible ways to update and improve techniques and methods.

1967 Annual Session. Topics of importance to the everyday practice of MSMS members were covered by medical authorities at the 1967 Annual Scientific Session in Grand Rapids.

Michigan Medicine. This official journal offered excellent original scientific papers (mostly by Michigan men about Michigan procedures and practices) in each issue. John W. Moses, MD, Detroit, was appointed in May as the new Scientific Editor, to succeed George H. Lowrey, MD, Ann Arbor, who resigned after completing a productive term of service.

Fall and Spring Programs for Component Medical Societies. During the fall of 1967 and the spring of 1968 MSMS provided postgraduate programs throughout Michigan except for the Detroit metropolitan area. A total of 39 faculty members from the three Michigan medical schools provided 37 programs in 20 selected centers, with most centers having both a fall and spring program. The educational value of these programs was further improved this year as more communities added afternoon clinical conferences at local hospitals to discuss actual cases. The Committee on Postgraduate Medical Education during the year sought to develop some approach to determine exactly what the physicians would like to have offered, and to find out how they continue their education.

Special Conferences. To further meet its responsibility in postgraduate medical education, MSMS sponsored the Seventh Annual Conference on Maternal and Perinatal Welfare; the Annual Diet Therapy Conference in Grand Rapids; and cooperated in presenting other programs for physicians.

The Conference on Maternal and Perinatal Welfare, sponsored by the MSMS Committee on Maternal Health, with financial assistance from the Clara Elizabeth Fund, was held March 26-27 in Flint. It was an outstanding success.

Under the capable leadership of Chairman Jack W. Thompson, MD, of Flint, and his committee of Flint physicians, this year's postgraduate meeting for those persons interested in the care of the mother and her child drew a total registration of 352 — 185 doctors of medicine, 22 osteopaths, 108 nurses, 20 students and 17 guests. All in attendance highly praised the excellence of the speakers and the subject matter presented.

Professional, Public and Legislative Relations

This report highlights some major MSMS efforts in the area of relationships with the profession, the public and the Legislature. MSMS has varied activities to communicate its concerns to special selected audiences and the people of Michigan.

Liaison with Component Societies. MSMS has had effective on-going communications with leaders of the 55 component medical societies. During the fall, a traveling "faculty" of MSMS officers and staff members held workshops in four regions of the state, to inform component society officers and other leaders about actions of the 1967 House of Delegates, and to discuss current projects and problems. Throughout the year, MSMS urged every component society to send representatives to the annual MSMS Workshop on Medicine and Religion, the annual MSMS Conference on the Medical Aspects of Michigan High School Sports, and other events. MSMS also provided information and guidance to component society leaders through *Michigan Medicine* and special letters on many subjects.

Liaison with the Michigan Association of the Professions, the Michigan Health Council, and Other Organizations. MSMS officers, committees and staff spent considerable time and effort to maintain good rapport with many Michigan organizations. Liaison was maintained with a long list of organizations, including the Michigan Association of the Professions, the Michigan Health Council, State Bar of Michigan, Michigan State Pharmaceutical Association, Student American Medical Association chapters at the three universities, Michigan Nurses Association, Detroit Medical Association, Michigan Youth Commission, Michigan Press Association, Michigan Council of Churches, Michigan Adult Education Association, Michigan Congress of Parents and Teachers, Michigan Week Foundation, Michigan Public Health Officers Association, Michigan United Fund, the New Detroit Committee and many others.

Career Recruitment. The Public Relations Committee carried out many activities to inform people and their parents of the fine career opportunities in medicine and related health fields. MSMS and the Michigan Health Council purchased their second major order of "Careers Unlimited," the AMA career handbook with eight pages of Michigan information to make the booklet especially pertinent. These booklets were distributed systematically to schools, libraries, youth groups, etc. Radio tapes, TV programs, etc., all supplemented the continuing efforts of MSMS to increase the health manpower available to serve the people of Michigan.

Health Careers Mobile. MSMS (which originated the mobile unit three years ago as a traveling museum about medical progress in Michigan) continued this past year to provide major financial assistance to the Michigan Health Council's Health Careers Mobile. New exhibits on health careers were added and others refurbished. Major highlights for the Careers Mobile were extended visits at Detroit's inner-city high schools and the appearance this spring at four metropolitan Detroit Health-O-Ramas.

Special Education Efforts. The Cancer Committee carried out a comprehensive effort to get more women to have annual Pap tests; the Family Life Education Subcommittee provided speakers for many programs about sex education; the Committee on Medical Aspects of Organized Athletics cooperated effectively with the Michigan organizations of coaches, directors of physical education and others; etc.

MSMS moved into another area of major public concern — Quackery Education; it held a Quackery Workshop in Detroit during the 1968 Conference on Michigan Health Planning, and another in Lansing for selected leaders from the Legislature, federal and state agencies, health organizations, civic groups, physicians, etc. The Council in June adopted a new program in quackery to work with schools, the Legislature, and others.

Appreciation is accorded again to the Michigan Association of the Professions and its award-winning television program, "Formula." During the past year, the Formula program utilized physicians to interpret health subjects to the viewers.

PART II

Annual Summaries of Committee Activities

The Council reviewed summaries for all MSMS and Council committees.

PART III

Matters Referred To The Council By The 1967 House Of Delegates

Single Medical Practice Act. Resolution 13, which instructed that a bill to establish a single medical practice act be prepared for introduction to the Michigan Legislature and returned to the next session of the MSMS House of Delegates, was referred to the Legal Affairs Committee.

A subcommittee of the Legal Affairs Committee is working on development of such a bill for presentation to the 1968 House of Delegates.

Financial Remuneration for MSMS Officers. Resolution 17 instructed the Finance Committee to investigate the concept of adequate financial remuneration for MSMS officers, investigate suitable means of securing the additional monies required, and make a report and recommendation on this subject to the 1968 House of Delegates.

The Finance Committee studied the entire matter, including the results of an opinion survey of past MSMS officers as to their feelings on the subject based on their experience in office.

The survey showed evenly divided opinion and no agreement on the question of remuneration as to desirability, method, amount, or who should be remunerated.

The Committee also noted that current policy provides for 1) special expense allowances of $1,000 annually for the President, Speaker and Council Chairman, and 2) reimbursement of out-of-pocket expense for authorized travel of all officers.

Although the Committee felt that officer candidates were not deterred by the expense reimbursement system, it did recognize the economic impact of some of the MSMS officer positions.

Regarding the source of funds, the Committee concluded that any major program adopted could only be financed by an increase in dues.

Lastly, the Finance Committee felt it was inappropriate for it to make any recommendations on a matter which might ultimately benefit some of its members and would therefore be self-serving.

Health Information Research Institute. Resolution 18 instructed The Council to "provide for organizational expenses incidental to incorporation of the Institute, materials necessary to present the principles of the Institute to prospective sponsors and such seed money as The Council deems necessary and available within the limitation of its present overall budget."

The Council did provide "seed money" in the amount of $5,000 for the 1968 budget year. The Institute employed two part-time people to develop plans and programs and to prepare the materials necessary to seek financing from prospective sponsors.

Reports are received by The Council from the HIRI Advisory Committee and the Executive Director, and in July The Council approved an interim progress report and authorized HIRI to solicit necessary funds. Progress reports will be regularly received by The Council.

Educational Program re Chiropractic. Resolution 31 encouraged MSMS "to initiate an educational program to enlighten the general public on the dangers of the use of unscientific methods by the chiropractic cult."

Educational conferences on the broader aspect of health quackery were held in Detroit and Lansing during the past year for the public and physicians. A recommendation that there be a new ongoing "MSMS Committee on Health Quackery" to carry out an educational effort grew out of the Lansing invitation conference April 1 and was adopted by The Council in June. This committee now will seek continually to educate the public about quackery, including the cult of chiropractic.

Supporting Appropriations for Four-Year Medical School at MSU. Resolution 31 directed that MSMS support the request of the State Board of Education for an appropriation to enable MSU to expand its College of Human Medicine to a four-year medical school.

Letters indicating MSMS support of this request were sent to the Governor and other appropriate state officials, and subsequently the requested funds were appropriated by the Legislature.

Approval of Screening Programs. Resolution 35 directed that The Council limit its approval of screening programs to those previously approved by the component medical society or societies in which the program is to be carried out.

This policy was in effect prior to the time the resolution was adopted so no further action was required.

Proposed Blue Shield Benefits for Sterilization. Resolution 36 directed that MSMS through appropriate officers apprise Michigan Medical Service of the Society's opposition to the MMS restriction denying surgical benefits for sterilization procedures, and request that the restriction be eliminated.

This matter was brought to the attention of the Blue Shield Board by MSMS officers and we have been advised that MMS is studying the problem.

Medical Society Membership for Osteopathic Physicians. Resolution 39 directed that component medical societies be encouraged to offer associate memberships to osteopaths on an individual basis, and outlined provisions whereby such associate members of component societies could be admitted to associate membership in MSMS.

Component society officers were informed of the resolution and its contents by letter, and appropriate publicity appeared in *Michigan Medicine.*

Separate Michigan Department of Public Health Covering Health-Related Activities. Resolutions 42 and 49 directed that MSMS contact the Governor informing him in the most forceful way possible that MSMS supports the retention of health-related activities within a strong separate Michigan Department of Public Health.

Immediately following the House of Delegates meeting, a letter was sent to the Governor, presenting in some detail and in a forceful manner the MSMS views on this subject. The Governor felt that a merger of the State Department of Public Health and of the State Department of Social Services at present would be inappropriate.

Medical Student Preceptorship Program. Resolution 46 directed that MSMS, in cooperation with the three medical schools in Michigan and their SAMA chapters, establish a preceptorship program throughout the state.

The Council referred this resolution to the Education Liaison Committee. The possibilities of establishing a preceptorship program as requested by the resolution are under study by the Committee and representatives of the three medical schools. In effect, this is a continuing study (which has many ramifications) of a preliminary investigation several years ago by the same Committee.

MSMS Support of 1968 Student American Medical Association National Meeting in Detroit. Resolution 53 directed that The Council and staff support this SAMA convention by extending all possible cooperation.

After consultation with SAMA officials, The Council authorized a $500 program grant and staff assistance to SAMA for this national meeting.

MSMS Liaison with Students of the Health Care Professions. Resolution 54 directed that MSMS "appoint a liaison committee with students of the health care professions in order to extend the availability of medical care."

The Council requested the Liaison Committee with Residents, Interns and Medical Students to implement the intent of this resolution.

Appeal Mechanism for Unresolved Adjudication. Resolution 59 directed that MSMS establish an appropriate appeal mechanism available to either Michigan Medical Service or the physician concerned in the situation of unresolved adjudication.

After review by the County Societies Committee of The Council, The Council accepted the Committee's opinion that an adequate appeal mechanism already exists, along with a request that our knowledge of the existing machinery routinely be made available to carriers other than Blue Cross-Blue Shield.

Commendation to Vice-Speaker Hayes. Resolution 64 asked that a suitable commendation be presented to Doctor Hayes as the retiring Vice-Speaker. A framed copy of the resolution was presented to Doctor Hayes at the MSMS Conference on Health Care Planning in Detroit in February.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, 1) noted the report of the Ad Hoc Committee on Blue Shield "and agreed with their unanimous recommendation that the present relationship between these two bodies be continued. We urge that every effort to improve communications between these two groups be utilized." 2) complimented the Treasurer and the Board of Managers, 3) urged each Delegate and each component medical society make every effort to be involved in comprehensive health planning. The future of medicine for all of us is dependent on this. In testimony before the Reference Committee there was considerable feeling that an attempt should be made to amend Public Laws 89-749 and 90-174 of the U.S. Congress to increase physician representation on comprehensive health planning boards.

(4) You have all received a copy of a draft dated 9/5/68 for a Single Medical Practice Act. The Reference Committee recommends that a study committee of the House of Delegates be appointed by the Speaker to review this draft. On this committee we feel there should be representation by Legal Counsel, the State Board of Registration in Medicine, and the Legal Affairs Committee. This committee should also obtain from each county medical society a review of this draft. This committee should report to The Council of MSMS, and your Reference Committee wishes to empower The Council to approve and use the final Single Medical Practice Act as they see fit in introducing it to the Michigan State Legislature.

(5) In the supplemental remarks of Dr. Mason this morning was a report from the Committee on Professional Insurance Plans, Dr. Robert Stow, Chairman. This report deals with a proposed professional liability insurance policy to be sold on a group basis to MSMS by the Employers' Group of Insurance Companies. It is the feeling of the Reference Committee that this House of Delegates should empower the Committee and The Council to act in our behalf to obtain this group coverage once the premium quotation is obtained, if in their judgment it is in the best interest of the Society to proceed.

(6) Your Reference Committee discussed The Council action regarding Resolution 17 of the 1967 House of Delegates. The Reference Committee suggests that the Speaker of the House appoint a committee to investigate the question of remuneration of MSMS officers and report their findings to the 1969 House of Delegates.

THE HOUSE substituted for the last sentence in item 4), the following: "This Committee should report to The Council of MSMS. Your Reference Committee wishes to empower The Council to approve and use the Single Medical Practice Act as they see fit in introducing it to the Michigan Legislature." With this substitution, the report was adopted as amended.

COMMITTEE REPORTS

17. Annual Summaries of Council Committees

COMMITTEE ON ALCOHOL AND DRUG DEPENDENCE

Herbert A. Raskin, MD, *Chairman*

During the year, the name of the Committee was changed to "Committee on Alcohol and Drug Dependence."

Alcoholism. The Committee continued its liaison with the Alcoholism Program of the Michigan Department of Public Health; reviewed and made recommendations concerning alcoholism legislation; had a meeting with Bruce L. Danto, MD, Chairman of the Detroit Mayor's Skidrow Committee; reviewed continuation of the MSMS thrust on alcoholism education and agreed that committee members should serve as a speaker bureau for component societies and other related groups; will look into the program and activities of the newly formed Michigan Alcohol and Addiction Association; and soon will have a joint meeting with the Committee on Occupational Health to consider a possible statewide meeting on alcoholism in industry for industrial physicians.

Michigan Criminal Code. The Committee made a thorough study of portions of the Code concerned with alcoholism and drug dependence, and recommended that the provisions in the Proposed Revised Michigan Criminal Code pertaining to alcoholism be accepted and supported by MSMS.

The Committee recommended that MSMS support the sections in the Proposed Revised Michigan Criminal Code pertaining to narcotics with the exception that the Committee questions the justification of the severity of the penalties imposed on the possessor of marijuana.

The Council referred the Committee's recommendations to the Committee on Legal Affairs.

Drug Dependence. Copies of all available material and information on the subject of drug dependence have been obtained and studied by the members of the Committee.

The Committee held a meeting with representatives of the House Committee on Narcotics and the Subcommittee on Alcoholism Program (of the Liquor Control Commission). Representative Dale Warner, Chairman of the House Committee on Narcotics, explained the aim and purpose of his Committee was the evaluation of laws governing the equity and adequacy of controls concerned with dangerous drugs and narcotics. In Michigan there is no state allocation of responsibility to meet any of the aspects of drug dependence.

The Committee will continue its liaison with Representative Warner and his Committee.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

A subcommittee has been appointed to investigate the possibility of a physician education seminar in drug dependence; the Committee has offered to serve as a consultative group in relation to drug dependence problems to MSMS members; has recommended to the State Board of Registration in Medicine that its board be expanded to include a group of physicians, qualified in drug dependency, to serve in an advisory capacity to law enforcement agencies in any problem relating to misuse and improper dispensing of drugs by physicians; the Committee will write articles on narcotic drug use and misuse and its relation to physicians for *Michigan Medicine;* and, will review any legislation concerned with narcotics.

The Committee will continue its study of the problem of drug dependency and will keep MSMS members informed.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON AWARDS

C. Allen Payne, MD

During 1967-68 MSMS continued its award program to recognize MSMS members for service to the profession and the public.

MSMS Outstanding Health Service Awards:

The MSMS Council, upon the recommendations of the Committee on Awards, selected 12 Michigan public officials, associations, firms, and foundations to receive recognition for their contributions to medicine and health. The awards were given at the First Annual Michigan Conference on Health Planning on February 24, 1968 to the following:

Clara Elizabeth Fund, Flint
Consumers Power Company, Jackson
Charles E. Forsythe, Lansing
Grand Rapids Press
Secretary of State James M. Hare
Michigan Association of the Professions
Outdoor Advertising Association of Michigan
Senator Robert L. Richardson, Saginaw
Sears-Roebuck Foundation, Chicago
Representative J. Robert Traxler, Bay City
The Upjohn Company, Kalamazoo
WJIM-TV, Lansing

MSMS Distinguished Service Awards:

The MSMS Council, upon the recommendations of the Committee on Awards, selected two MSMS members to receive recognition for their efforts to improve the health and medical care of high school and college athletes. Distinguished Service Awards, presented at the First Annual Michigan Conference on Health Planning, February 24, 1968, were presented to:

James S. Feurig, MD, East Lansing
Gerald A. O'Connor, MD, Ann Arbor

MSMS Awards to National Presidents:

As in the past, MSMS will present its National Presidents Award to MSMS members who are serving as presidents of national medical organizations. The MSMS Council approved the recommendations of the Committee on Awards to present the award to the following during the 1968 MSMS House of Delegates meeting:

H. Marvin Pollard, MD, Ann Arbor
American College of Physicians

Raymond W. Waggoner, MD, Ann Arbor
American Psychiatric Association

Edwin De Jongh, MD, Birmingham
American Academy of Occupational Medicine

Rosser L. Mainwaring, MD, Dearborn
American Society of Clinical Pathologists

John J. Hanlon, MD, Detroit
American Public Health Association

MSMS Flag Awards:

The Council, upon the recommendations of the Committee on Awards, created a new category of awards to recognize Michigan physicians who are serving as presidents of various state-wide organizations. The Council approved awards to 10 Michigan physicians. The awards, given during the First Annual Michigan Conference on Health Planning, February 24, 1968, were presented to the following:

Carl B. Beeman, MD, Grand Rapids
President, Michigan Heart Association

Donald R. Hagge, MD
President, Michigan Archeology Society

John J. Hanlon, MD, Detroit
President, Michigan Public Health Association

William N. Hubbard, Jr., MD, Ann Arbor
President, Michigan Association for Regional
Medical Programs

Benjamin Jeffries, MD, Detroit
President, Michigan Epilepsy Center and Association

George D. Maniaci, MD, Gladstone
President, Michigan Association for Retarded Children

G. Frederick Moench, MD, Midland
President, Michigan Society for Better Hearing
and Speech

John B. Rowe, MD, Flint
President, Michigan Diabetes Association

G. B. Saltonstall, MD, Charlevoix
President, Michigan Association of the Professions

H. A. Towsley, MD, Ann Arbor
President, Michigan Health Council, and
Michigan United Fund

Fifty-Year Service Awards:

The 1968 House of Delegates will recognize physicians who have served 50 years in the practice of medicine. As of September 10 the list of awards included the following — several others may be reported by component medical societies before the actual presentation on September 24:

Calhoun County:
  A. M. Giddings, MD, 104 Kicker Pl., St. Mary's, Ohio 45885
  Welcome B. Lewis, MD, 196 Irving Park Dr., Battle Creek, 49017
  William V. Vandervoort, MD, Route #4, Hastings, 49058

Grand Traverse County:
  Edward F. Sladek, MD, 123 East Front Street, Traverse City, 49684

Ingham County:
  M. S. Hurth, MD, 1717 Jerome Street, Lansing, 48912

Kent County:
  Garnet G. Stonehouse, MD, 408 Medical Arts Bldg., Grand Rapids, 49502

Menominee County:
  Karm C. Kerwell, MD, P.O. Box 17, Stephenson, 49887

Oakland County:
  Sol M. Lewis, MD, 541 West Oakridge, Ferndale, 48220

Saginaw County:
  Lloyd C. Harvie, MD, 330 South Washington Ave., Saginaw, 48607

Wayne County:
  Elden C. Baumgarten, MD, 1062 Lochmoor Blvd., Grosse Pointe Woods, 48236
  Wyman C. C. Cole, Sr., MD, 1116 Leisure Lane, Walnut Creek, Calif. 94597
  Ray S. Dixon, MD, 5001 VanDyke, Detroit, 48213
  Clyde H. Hasley, MD, 2320 North LaSalle Gardens, Detroit, 48206

William E. Hilton, MD, 5013 Harding, Detroit, 48213
Joseph A. Kasper, MD, 1011 Cadieux Road, Grosse Pointe Park, 48230
Fred O. Lepley, MD, 19799 Mack Avenue, Grosse Pointe Woods, 48236
Alton R. Marsh, MD, 15696 Woodland Drive, Dearborn, 48120
Arthur B. Norton, MD, 1077 Fisher Bldg., Detroit, 48202
Robert L. Novy, MD, 858 Fisher Bldg., Detroit, 48202
Harold F. Raynor, MD, 49 Virginia Park, Detroit, 48202
John R. Rieger, MD, 746 Pallister, Detroit, 48202
Isaac S. Schembeck, MD, 1553 Woodward Ave., Detroit, 48226
James M. Stanton, MD, 1001 Mutual Bldg., Detroit, 48226
Milton D. Vokes, MD, 10182 Gratiot Ave., Detroit, 48213
Alfred H. Whittaker, MD, 3 Elmsleigh Lane, Grosse Pointe, 48230
Now in Escondido, California:
T. P. Wickliffe, MD

THE HOUSE, based on the recommendations of the Awards Committee, did present the awards outlined in this report (see Section on Presentations and Awards).

COMMITTEE ON BEAUMONT MEMORIAL

Bradley M. Harris, MD, *Chairman*

Early this year, Mrs. George A. Brotherton, a descendant of Doctor William Beaumont, contacted the committee as to whether or not the Michigan State Medical Society wanted to purchase a silver friendship cup which once belonged to Doctor Beaumont's daughter, Sarah, who in turn gave it to her daughter Lucretia Irwin.

After studying the matter, and consulting with Eugene T. Petersen, Director of the Mackinac Island State Park Commission, the committee decided the friendship cup would be a valuable addition to the Beaumont memorabilia on the Island, because of the historical association with Doctor Beaumont.

The silver friendship cup is currently on display there. Other items in the Beaumont collection are in good condition and well displayed.

The Committee will meet July 20 on Mackinac Island to discuss further matters.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON COURSES ON MEDICAL ECONOMICS AND ETHICS

Richard O. Kraft, MD, *Chairman*

The Committee on Courses on Medical Economics and Ethics met in Ann Arbor on August 28, 1968.

At this meeting the members reviewed the subject material presented during the preceding year to the students at the University of Michigan. A variety of topics were presented including a discussion of osteopathy, problems related to narcotics, military medicine, medicine and religion and the business side of medicine.

The Committee was most concerned about the limited attendance recorded during these sessions by senior students. In previous years and months various methods have been utilized to improve the attendance — including meetings in the evening, less frequent meetings, a change of subject material, a change in technique of presentation, all to no avail.

The Committee approved a recommendation that its chairman investigate alternate times and places in the medical students university experience for these meetings so that more of this valuable material can be presented and appreciated by more students. Included during this forthcoming "trial year" will be presentations to the freshman and sophomore students as well as postgraduate students (residents).

The results of these efforts will be supplied in next year's annual report.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report believing this to be an important work in each of the medical schools in the State, and suggested that thought should be given to publishing in pamphlet form the valuable material contained in the course.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON EDUCATION LIAISON

Milton R. Weed, MD, *Chairman*

The Education Liaison Committee, which is one of four standing committees of The MSMS Council, has met twice this past year with two subcommittees also working on special assignments.

The work of the Committee can be divided into five areas:

1. *Ongoing efforts to improve liaison between MSMS and the three medical colleges:* The deans and/or their representatives participated regularly in Committee meetings and studies.

2. *Continuing study of the possibilities of training "physician assistants" in Michigan:* A special subcommittee, with H. J. Meier, MD, as chairman, has conducted an extensive investigation of the 1965 House of Delegates Resolution 20 to consider the development and use of "physician assistants." During 1965-66, 1966-67, and now 1967-68, the special subcommittee has held hearings with representatives of the State Board of Education, the three medical schools, and several medical specialties. The committee has studied materials from the AMA, from Duke University, which has a small physician assistant training program, and from other sources. The committee has concluded that the training of such "assistant physicians" would be feasible in Michigan. The committee has not been able to reach a final decision whether a two-year training program would be possible in community colleges, or whether four years should be required at a university with perhaps a bachelor's degree in medicine given to the graduate. All agreed that upward mobility should be assured so that the person could continue on perhaps at a later date for a regular degree in medicine. At its last meeting, the parent Committee sent a recommendation to The Council "that the Education Liaison Committee be authorized to work with interested component medical societies and physicians and their local institutions of higher education to train such personnel on a pilot basis in order to further explore the feasibility of training physician assistants." The Council approved the Committee request and at least one of the subcommittee members is exploring the subject further with a state university.

Further study of the training program, of the job description, of the many ramifications of licensure, insurance, etc., will be carried on by the parent committee and subcommittees.

3. *Consideration of possible ways to obtain more interns, residents and new physicians for Michigan:* The Education Liaison Committee late in 1966-67 requested permission from The Council to appoint a special task force committee to study changing patterns of selection of internships by graduates of the two Michigan medical schools. The task force, under the chairmanship of Kenneth L. Krabbenhoft, MD, soon expanded its scope to concern itself with the closely related questions about residents and new Michigan physicians. The task force has met with representatives of the University of Michigan Institute for Social Research to develop and conduct a

survey of senior medical students, interns, residents, and new doctors entering practice in Michigan to determine motivating factors, etc. Costs of such a survey has been estimated to range from $5,000 to $7,000. Alternative ways to conduct such a study, or to finance the project, are being considered.

Related to some degree is a medical manpower study underway now in 13 southwestern Michigan counties by the Michigan Health Council with financial assistance from the Michigan Foundation for Medical and Health Education. The MHC executive director has met with the Education Liaison Committee to discuss this regional study.

4. *Consideration of Resolution 46 adopted by the 1967 MSMS House of Delegates:* The Council referred Resolution 46 to the Education Liaison Committee for implementation. The resolved portion read: "that MSMS, in concert with the faculties of the three medical schools and the SAMA chapters establish a preceptorship program throughout the state." The Committee reviewed the reports of a previous subcommittee in 1965-66 and 1966-67 to consider a similar resolution about general practice preceptorships. That subcommittee, after considerable research and study, reported to the 1967 House of Delegates that "the preceptorship approach is only one part of a possible total program" to obtain more GPs in Michigan. The current committee has discussed Resolution 46 with medical school representatives. The importance of qualified preceptors was suggested as one of the key factors in any broad preceptorships for interested medical students. The parent committee referred the matter for detailed study to the task force committee headed by Doctor Krabbenhoft. That committee includes representatives of the three dean's offices. No decision has been reached to date.

5. *Consideration of the Report of the National Advisory Commission on Health Manpower:* The Committee has studied the 53 recommendations made by this national committee. The recommendations and the AMA comments on each appeared in JAMA, February 12, 1968. The Report was discussed by an AMA official at the 1968 MSMS Conference on Health Planning in Detroit.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON EMERGENCY AND DISASTER MEDICAL SERVICES

Charles P. Anderson, MD, *Chairman*

During the year, The Council changed the name of the Committee to "Committee on Emergency and Disaster Medical Services." Therefore, the scope of the Committee has been enlarged to include emergency medical services to persons injured in accidents and to other injured and ill persons who go to hospital emergency rooms.

The Committee urges all component medical societies, with the help and cooperation of the local health department, to take leadership in developing an emergency medical care plan.

Also, it is suggested that in times of disaster, civil disturbance, and other emergencies in areas located within the county society, a representative of the county society or societies involved, contact the physicians in the disaster or emergency area to offer the help of the county society and its members. This call should be made before a request for help comes from the disaster or emergency area.

The Committee feels that H.B. 3946, licensing of ambulance attendants, now a Michigan law, will contribute greatly to the safety of patients being transported to hospitals. The Committee urges all members to give their full support to the implementation of this law and to cooperate in any way possible with the training of the personnel involved.

The Committee will endeavor to keep the membership informed via the publication of articles, news notes, etc., in *Michigan Medicine* and other MSMS publications.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON EYE CARE

Robert T. Blackhurst, MD, *Chairman*

The Committee continued its liaison, in an advisory capacity, with the Michigan Department of Public Health, Bureau of Maternal and Child Health and with the Michigan Department of Social Services, Services for the Blind Division.

A postal card survey, seeking information on blind-deaf children in Michigan, was sent to all physicians and osteopaths in Michigan. This information will help to bring educational aid to these blind-deaf children and to their families, through the services of the Michigan School for the Blind.

A subcommittee is working on revisions to the State's Blind aid form; and reports were presented and discussions held on the school and preschool vision screening programs, color testing, aid to children under the Medical Eye Care Program, the identification of blind and deaf-blind infants, and the follow-up of visual referrals. The Flash Card Vision Test was demonstrated for the Committee and it was recommended that the MDPH proceed with this testing.

A report of attempts being made to identify dyslexic children and further educate them was discussed by the Committee. The pilot project in the Lansing school area is attempting to identify those children with essential dyslexia, apart from all other children. This subject will be reviewed at future meetings of the committee.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON INTERNATIONAL HEALTH

Hira E. Branch, MD, *Chairman*

One of the main efforts of the International Health Committee during the past year was to publicize the need for more medical aid to the civilian population of South Vietnam.

Doctors who had been to South Vietnam appeared on radio and television shows, urging that the United States government make a larger commitment of medical aid to South Vietnamese civilians and informing the public of the American Medical Association's Volunteer Physicians for Vietnam program.

Alfred Swanson, MD, of Grand Rapids appeared before several government groups urging an increase of medical aid to South Vietnam.

Various newspapers around the state carried feature articles and editorials on this subject. Throughout the year *Michigan Medicine* carried news articles, pictures, and editorials urging physicians to consider giving their time for work in South Vietnam. In addition, a long feature article, detailing the experience of Michigan physicians in South Vietnam, along with a special cover appeared in the February, 1968 issue of this publication.

During the period July 1, 1965 to June 30, 1968, eighteen Michigan doctors served in the Volunteer Physicians for Vietnam program.

Throughout the year, the Committee has furnished information to interested physicians about the various organizations which sponsor medical work overseas.

At present the Committee is studying the possibility of holding a one-day workshop, in cooperation with the MSU Extension Service, for physicians and lay groups on international problems of food and population.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

LIAISON COMMITTEE WITH MICHIGAN STATE PHARMACEUTICAL ASSOCIATION

Harvey C. Hansen, MD, *Chairman*

The Chairman wrote to the Wayne County Medical Society suggesting that, because a joint code of understanding failed to materialize at the State level, liaison between WCMS and the Metropolitan Detroit Pharmaceutical Association might be advisable and mutually advantageous.

Resolution 7 of the 1966 House of Delegates and Resolution 10 of the 1967 House of Delegates involving Rule 16 of the Michigan Board of Pharmacy were reviewed. Further study and analysis is required before recommendations can be made. Also discussed was Resolution 50 of the 1966 House of Delegates concerned with improving the method of uniform drug identification, but no action was taken.

Discussed were the use of charcoal in Poison Antidote Kits, ethics of pre-printed prescription blanks, MSPA attempts to gain representation on Board of Michigan Association for Regional Medical Programs, drug control, prevention of refilling same prescriptions by several pharmacies, nurses' liabilities and responsibilities when telephoning orders, and the need for liaison to resolve mutual problems when they arise.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

LIAISON COMMITTEE WITH PODIATRY

Wm. H. Blodgett, MD, *Chairman*

Pursuant to Council direction, the Liaison Committee with the Michigan Podiatry (Chiropody) Association has been engaged during the past year in dialog with leading elected officials of that organization, for the purpose of improving the understanding of physicians of the training, practice and goals of podiatry and the understanding of podiatrists of the policies of medicine concerning paramedical practice privileges in hospitals.

This constitutes an interim report, inasmuch as extensive study is going forward, on the status of podiatry around the United Sates both educationally and with regard to state laws. Considerable material has also been received from the American Medical Association and from the Joint Commission on Accreditation of Hospitals which will be carefully evaluated. Following this additional meetings with Michigan Podiatry officials will be required before a final report can be developed.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended acceptance as an interim report.

THE HOUSE adopted the report of the Reference Committee.

LIAISON COMMITTEE WITH RESIDENTS, INTERNS, AND SENIOR MEDICAL STUDENTS

Norman D. Henderson, MD, *Chairman*

The Committee, after work with Merck, Sharp and Dohme, has finished plans for an educational conference on Office Management for residents, interns and senior medical students on the afternoon of September 26 at the Sheraton-Cadillac Hotel in Detroit, during the MSMS Annual Session.

Various topics for the conference were considered, and the Committee decided that the program should focus on basic principles of office management. Members of the Committee felt that the conference would be very beneficial to the young physician who is setting up practice so that his office can be both efficient and flexible enough to grow with his practice.

Conference topics were narrowed to four: a) opening an office; b) selecting personnel; c) billing system; d) evaluating partnership prospects.

The Committee is grateful to Merck, Sharp and Dohme for support of this conference and feels that this unique event will not only be of educational benefit to the young or prospective physician but will serve as an effective way of introducing him to the activities of the Michigan State Medical Society.

The Council has delegated to this Committee the authority for implementation of Resolution 54 of the 1967 House of Delegates, which deals with MSMS liaison with students of the health care professions. This matter is being studied and recommendations shall be made as soon as the Committee completes its work.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

LIAISON COMMITTEE WITH STATE BAR OF MICHIGAN

Orlen J. Johnson, MD, *Chairman*

Revision of Statement of Principles for Lawyers and Physicians. This Committee and the State Bar Medico-Legal Committee have recommended revision of the House of Delegates, which deals with MSMS Liaison present agreement between MSMS and the State Bar. These revisions place the responsibility on the attorney to pay the physician a reasonable fee for services rendered in cases where the physician aided in preparing a case, but did not have the opportunity to testify. These changes have been approved by The Council and are now being considered by the State Bar Commissioners.

Resolution 14, 1967 House of Delegates. This resolution, concerning the feasibility of establishing a commission to study the problem of increasing malpractice suits against physicians, has been favorably considered by both committees. Representatives from both professions will soon be appointed so that this important study can be underway.

Resolution 58, 1967 House of Delegates. This resolution, aimed at clarifying Michigan law to safeguard the privileged character of medical records, is under active study by both committees. A report will be made to The Council as soon as this study is completed.

Better Communication Between the Two Professions. A plan to improve communication between the two professions by establishing liaison representatives on a geographic district basis is being developed. A full report will be made to The Council as soon as this work is completed.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

LIAISON WITH STATE BOARD OF REGISTRATION IN MEDICINE

K. H. Johnson, MD, *Chairman*

The Committee met with the members of the State Board and representatives of the Investigations Division, Department of Licensing and Regulation. Items discussed were training of investigators, limitations of Medical Practice Act, responsibilities of office personnel performing delegated services and the use and abuse of narcotics.

MSMS has asked the State Board to annually publish a list of those licensed to practice in Michigan by county with a copy to each county clerk.

MSMS also urged the State Board to study and implement, if possible, the following recommendation:

> "The State Board be expanded to include a group of physicians, qualified in drug dependency, to serve in an advisory capacity to law enforcement agencies in any kind of problem that would have to do with misuse and improper dispensing of drugs by physicians."

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

LIAISON COMMITTEE WITH STATE EXECUTIVE OFFICE

KENNETH H. JOHNSON, MD, *Chairman*

One of the most vital correlated activities of the "governmental relations" section of the MSMS Headquarters office is the maintenance of close and effective liaison with the Office of the Governor of Michigan, including not only the Chief Executive himself but also his chief staff aides concerned with legal, agency and program matters. Policies of MSMS are enunciated to the Executive branch of Michigan State Government through the activities of this liaison committee, which also assists upon request with appointments to councils and advisory bodies. Appropriate contacts are also made with the Lieutenant Governor and his staff.

It is more the rule than the exception that the Executive Office will consult the MSMS Liaison Committee on such matters of great importance to medicine as formation of the State Health Facilities Council, Comprehensive Health Planning Advisory Committee, and similar bodies. As an example of the importance of matters discussed by this Committee and the Executive Office, the study of a possible merger of the Public Health and Social Services Departments is cited. The Committee acts only upon directive of The Council.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MEDICAL ASPECTS OF ORGANIZED ATHLETICS

JAMES S. FEURIG, MD, *Chairman*

The Committee's major activity this year was the presentation of the Third Annual Michigan Conference on the Medical Aspects of High School Sports at Detroit, May 8, 1968. The Committee organized the fine program and secured the cosponsorship of the University Center for Adult Education (a cooperative adult-education project of Wayne State University, the University of Michigan and Eastern Michigan University) to obtain use of the Rackham Center in Detroit.

One hundred team physicians, coaches, trainers and high school principals participated in the program. Speakers included team physicians for the Notre Dame Irish and the Ohio State Buckeyes, and an official from the dental service division of the Michigan Department of Public Health.

The Committee, with the approval of The Council, is now actively urging component medical societies to help high schools in their area to obtain doctors of medicine to serve as team physicians.

Three committee members spoke at the annual meeting of the Michigan Association of physical education.

The Committee cooperated with the Committee on Child Welfare in its development of a position statement about high school wrestling weights for the State Departments of Education and Public Health.

The 1968 MSMS Awards Luncheon in Detroit February 24 included "Outstanding Health Service Awards" to Charles Forsythe, executive director of the Michigan High School Athletic Association, and to two members of the Committee, Chairman James S. Feurig, MD, East Lansing, and Gerald A. O'Connor, MD, Ann Arbor.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MEDICINE AND RELIGION

WINSLOW G. FOX, MD, *Chairman*

The moral and ethical issues facing physicians today were discussed at MSMS headquarters by 30 chairmen of county medical society medicine and religion committees and other invited guests, in a day-long workshop.

The Reverend Doctor Paul B. McCleave, Director of the AMA Department of Medicine and Religion participated in the Workshop. Luncheon speaker was LeRoy Augenstein, Ph.D. — his topic: "Who Shall Decide?"

The Committee on Medicine and Religiou co-sponsored with Alma College a physician-clergy workshop on May 2, 1968. Keynote speaker was Reverend Robert E. Reeves, Jr., Chaplain of Columbia Presbyterian Medical Center, New York City.

During the past year over 35 county medical societies participated in medicine and religious activities. The Committee hopes that every county society will name a chairman and activate a committee in 1969. This Committee's purpose is to develop a program to create a stimulating climate for communication between physicians and clergymen, leading to more effective care and treatment of the patient.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MICHIGAN MEDICAL HISTORY

JOHN R. G. GOSLING, MD, *Chairman*

During the past year the Committee has continued its interest in Michigan's medical history in the following ways:

The Committee recommended (and The Council approved the recommendation) that a repository be determined for objects, literature, photographs, etc., of an historical nature. Accordingly, space has been made available at MSMS Headquarters for such a repository.

Through Alfred H. Whittaker, MD, the Committee has contacted the Michigan Historical Society and proposed that it establish a medical history branch. Work on this project is continuing.

The Committee has also investigated the possibility of distributing the Stapleton book on medical history during the Wayne State University Medical School's centennial celebration and at various medical meetings. Work on this project is also continuing.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON NURSING

Robert L. Tupper, MD, *Chairman*

During the past year the Committee has been concerned with various questions of nurse practice. After much deliberation the Committee decided that its role in answering many of these questions is to serve as a clearinghouse for the questions, referring them to the appropriate medical and nursing specialty groups for their recommendations. The Committee does, however, recommend that guidelines for nursing practice be established.

The Committee has also been interested in various legislative issues, specifically the proposed rules and regulations to the Nurse Practice Act of 1967.

In October 1967 the Committee Chairman attended the AMA-sponsored Conference on Nursing in Chicago. One of the charges there was for each state Committee to attempt to develop dialogues similar to the three previous ones conducted nationally between physicians and nurses. Partially as a result of this and partially by independent impetus from the liaison group from the Michigan Nurses Association, a significant effort to this end was developed.

Accordingly, the major work of the Committee during the past year has been to plan and sponsor an MD-RN dialogue-type conference, September 4-5, 1968, at the MEA Conference Center, St. Mary's Lake. Outstanding speakers should fulfill the three main objectives of the Conference: 1) to serve as a pilot venture for future local and state level conferences to improve physician-nurse working relationships; 2) to improve the physician-nurse working relationships and understanding in actual practice; and 3) to improve patient care as a result of better cooperation between physicians and nurses. The Committee is grateful to MSMS and the MNA for their financial support of the Conference.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON REHABILITATION

Richard W. Pomeroy, MD, *Chairman*

1967 House of Delegates Referrals. The Committee considered Resolution 22 entitled "Study of Adequacy of Training of Certain Paramedical Personnel."

During the year, the Committee studied the "Proposed Guidelines for Physician Therapy Aide Training" as printed and approved by the American Physical Therapy Association. The "Guidelines" are essentially an outline of subject matter which could be included in an aide training program. The "Proposed Program for Physical Therapy Aide Training," a sample of the way that an aide training program might be organized, also was reviewed by the Committee. Guidelines and program for the training of assistants have not as yet been approved by the APTA.

The Committee does not see how it can make the study as indicated in the resolution, but feels it is in a good position to review any new programs for the teaching and training of paramedical personnel in the State and will keep The Council informed.

In reviewing Resolution 23, "Recognition of the Board of Registration of Physical Therapists," the Committee informed The Council that there is only one body of registered physical therapists, with no other level of physical therapists being recognized at this time. The Michigan law definitely sets forth the qualifications of a physical therapist.

The Committee sent an explanatory letter and a copy of the Michigan law to the secretaries of Michigan's component societies on August 31, 1967.

The recommendation contained in the *Annual Report of the Liaison Committee with the Michigan Crippled Children Commission and Resolution 25,* concerned with the care of handicapped children, were reviewed by the Committee.

The Committee will cooperate in all ways possible with the Committee for the Care of the Handicapped Child of the American Academy of Orthopaedic Surgeons and will maintain liaison with other organizations, agencies and departments involved in the care of handicapped children in Michigan.

Rehabilitation Nursing. The Committee asked The Council to make known to the Michigan Association for Regional Medical Programs its concern that there is a real need for nurses to be trained in the rehabilitation aspects of heart disease, cancer and stroke, and to urge MARMP to set up a program in the immediate future to insure an adequate number of trained rehabilitation nurses to care for patients suffering from heart disease, cancer, stroke and related diseases.

MARMP replied that a Rehabilitation Nursing Program was being developed at Wayne State University and University of Michigan and that other programs were under consideration, and that the recommendation would be shared with the appropriate corporation committees, the three universities and the Michigan Department of Public Health.

Rehabilitation Nursing Careers. The Committee is cooperating with the Michigan Health Council in setting up an exhibit for the Career Mobile and working on the possibility of moving beyond the exhibit and attempting to make some personal contacts with the students in the schools. The Committee feels it important to get the personal involvement of students interested in rehabilitation nursing, after the initial exposure to the exhibit.

Visit to Traverse City. The Committee visited the rehabilitation facilities at Munson Hospital in Traverse City and plans to visit other such facilities throughout the State.

THE REFERENCE COMMITTEE on Reports of The Council and Officers, E. E. Elder, MD, Chairman, recommended acceptance of the report.

THE HOUSE adopted the report of the Reference Committee.

RELATIVE VALUE STUDY COMMITTEE

Ben R. VanZwalenburg, MD, *Chairman*

The Committee, by a meeting on April 6 and by intracommittee correspondence has carried on its assigned task of studying the Michigan RVS.

The finalized AMA current Procedural Terminology (CPT) has not been published. This precludes any attempt to resolve the differences between the CPT and the Michigan RVS. We expect that the CPT will eventually be adopted nation-wide and that the Michigan RVS should be brought into line with the CPT nomenclature and numbering system.

The need for continuing the Michigan RVS was discussed. It is obvious that the "variable fee" type of payment by third parties will more accurately reflect current charges and their variations by location and by specialty than does an RVS. The Committee, however, feels that the Michigan RVS should be continued as it is a valuable reference for physicians and third parties.

The continuing necessity for annual revision of the Michigan RVS is indicated because fee patterns are constantly changing in response to developments in medical science and practice.

The Committee recommends approval of the *1965 Michigan Relative Value Study,* (revised 1968) to mirror current relative values. The 1968 revisions include minor changes in Neurosurgery, major changes in Anesthesiology and changes in Radiology, Radiotherapy-Radionuclides. (It is expected that the changes in Radiology nomenclature will be largely followed in the new CPT).

Errors in last year's RVS were corrected by omission of procedure 9606 and correction of procedures 9359 and 9363.

The Committee expresses its thanks to the representatives of the Michigan Association of Neurological Surgeons, the Michigan Society of Anesthesiology and the Detroit Roentgen Ray Society for their assistance. The Committee also expresses appreciation to Richard Campau and his office for carrying out the involved staff duties inherent in preparation of this year's revisions.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended adoption of the RVS, revised 1968.

THE HOUSE adopted the report of the Reference Committee.

18. Annual Summaries of Standing Committees

ADVISORY COMMITTEE TO THE MICHIGAN STATE MEDICAL ASSISTANTS SOCIETY

Glenn E. Millard, MD, *Chairman*

There have been no formal meetings of the Committee during the past year, although many of the advisors have attended meetings of the Medical Assistants Society, and the advisors have been asked for their counsel and advice.

The Committee has been very much interested in the education and certification programs of MSMAS and has encouraged the expansion of these programs. The MSMAS Education Committee is constantly striving to increase the number of formal training centers in Michigan and to insure the excellence of the training they provide. In addition, MSMAS has sponsored two educational seminars for its members as well as an officers' training conference during this past year. Eight MSMAS members are now Certified Medical Assistants, indicating that they have passed examinations requiring great competency in clinical and administrative fields. The Committee encourages MSMAS members to prepare for and take the certification exams.

MSMAS has undertaken several public relations projects this year. The AMA publication "Winning Ways with Patients" has been distributed to over seven thousand physicians' offices throughout Michigan. MSMAS officers and the Committee Chairman have written articles published in *Michigan Medicine*, and special medical assistants meetings and programs have been publicized in the news media.

Despite a growing membership in MSMAS, the Advisory Committee continues to be concerned about the number of members. The Committee urges MSMS members to encourage their medical assistants to join MSMAS.

Further information about the activities of MSMAS during the year are given in the President's report to the House of Delegates and her written report in the Delegates' Notebook.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

ADVISORY COMMITTEE TO WOMAN'S AUXILIARY

Edward H. Rodda, MD, *Chairman*

Since no problems of policy relative to the Auxiliary arose during the past year, it was not necessary to call a formal meeting of the Advisory Committee. However, all members of the Committee were readily available for advice and counsel.

The Advisory Committee urges all MSMS members to encourage their wives to join the Auxiliary and help advance its work. Although membership has increased during the past year, the Advisory Committee would like to see the potential membership realized.

The Auxiliary has undertaken and completed many valuable projects during this year, many of which are reflected in the President's report to the House of Delegates and in her written report in the Delegates' Notebook.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON AGING

A. Hazen Price, MD, *Chairman*

The Committee on Aging has held two meetings with excellent attendance of its membership. Of major committee interest were (1) aspects of nursing home care, (2) the progress of MARMP, and (3) the extent of inclusion of concepts of preventive medicine in the curriculum of medical schools. An area conference on rehabilitation and long term care of elderly patients was held at the Saginaw County Hospital, with the Committee on Aging as cosponsor.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended that this very important committee offer direction to the members of MSMS and that it encourage further liaison with the AMA Committee on Aging.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON BLOOD BANKS

Lawrence W. Gardner, MD, *Chairman*

Having secured The Council's support on May 9, 1967 — "approved study by the Committee on Blood Banks regarding the possible establishment of a central (viral hepatitis) registry, the study to include methods of financing and legal responsibilities of providing information concerning donors," probing actions have been made to the Red Cross and Michigan Department of Health. Both organizations have expressed sincere interest in this endeavor and are in the process of formulating specific recommendations to our Committee.

Relative to the Red Cross: American Red Cross at the national level does not object to such a registry and have made computer space available to the Southeastern Michigan Chapter for this purpose on a community wide basis, if the community desires to participate. However, a definite proposal has not been rendered.

Relative to the Michigan Department of Health: An application for a contract has been sent to the National Heart Institute for financial support to determine the feasibility of a serum hepatitis registry. This study would include actual trials of a proposed system. The type of system, mode of operation, method of financing, effectiveness, etc., are points requiring considerable investigation.

These organizations and our Committee feel that a statewide system of reporting to blood banks those persons having had hepatitis or having been implicated in a transfusion causing hepatitis will be valuable. At the present time, such a system for controlling viral hepatitis has not been formulated in any state. We trust the House of Delegates appreciates the tremendous complications of this endeavor.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON CANCER

Max E. Dodds, MD, *Chairman*

The Committee discussed how the MSMS and its members could participate in an educational program on smoking and health. Discussions were held with a representative of the Michigan Council on Smoking and Health and the MSMS Public Relations Committee, and a subcommittee was appointed to meet with other scientific committees to subsequently present recommendations to The Council for such a program.

The Committee feels that MSMS should become meaningfully involved in and influence projects developed by universities and others in connection with the programs of the Michigan Association for Regional Medical Programs. The Committee recommended to this organization that it consider at pilot program of two-way radio conference programs and the establishment of a training course for teaching of uniform tumor registry procedures for local hospital personnel. MARMP replied that the recommendations would be shared with the appropriate corporation committees and with the three universities along with the Michigan Department of Public Health and the Michigan Cancer Foundation.

The Committee expressed its view that all hospitals in Michigan should have approved cancer programs with trained personnel. A survey of the status of cancer registry techniques in Michigan will be made by the Committee.

In addition, the Committee will look into the Muskegon video educational to see if there is a way this type of program can be extended to cancer education in Michigan, through the cooperation and help of the Committee.

The Committee feels that, although health and cancer quackery exists in Michigan, the problem does not seem to be too great.

Two members of the Committee continue to serve as representatives to the Michigan Cancer Coordinating Committee with routine reports to The Council. The MCCC continues to coordinate cancer efforts in Michigan and supplies cancer speakers for meetings of physicians, dentists, and osteopaths.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, was impressed with the Committee's activities and recommended acceptance of the report with minor editorial changes.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON CARDIAC DISEASE CONTROL

Sidney E. Chapin, MD, *Chairman*

Rheumatic Fever. Cooperation has continued with the Michigan Heart Association's Rheumatic Fever Committee and the Committee has helped with the statewide rheumatic fever conferences. Discussions were held with the MHA rheumatic fever coordinator. The Committee will continue to evaluate 1. the value and use of throat cultures; 2. the need for community programs; 3. the "injudicious" use of antibiotics; 4. problems of people with fixed valvular heart disease; 5. the unavailability of adequate laboratory service in some communities; 6. the possibility of circulating laboratory service, with the help of local health departments; and, 7. the use of "do-it-yourself" throat culture kits.

The Committee has offered its help to the Michigan Department of Public Health in its current study of bicillin program.

Nutrition Survey. The MHA Nutrition Survey has resulted in 1,914 responses. When the coding is completed and the report written, the Committee will review the results.

Michigan Association for Regional Medical Programs. The Committee met with A. E. Heustis, MD, Executive Director of MARMP, and recommended that, because The Council of MSMS can, and does, disseminate information to individual physicians, it launch a program to acquaint the "grass roots" physicians, statewide with the aims and program of MARMP.

The Council approved this recommendation and in addition, requested Doctor Heustis to prepare an article for publication in *Michigan Medicine* in August or September, 1968.

Screening Program. The Committee reviewed the action taken by the 1967 House of Delegates regarding screening programs.

Guide for the Registered Nurses in a Cardiac Care Unit. The Guide has been reviewed and approved by the Committee.

Liaison. The Committee will continue its liaison with MHA and other persons and groups concerned with cardiac disease control.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON CHILD WELFARE

John M. Dorsey, Jr., MD, *Chairman*

The minutes of the Committee's meeting will not be considered by The Council until the time of the 1968 Annual Session.

The Committee is recommending that The Council request the Michigan Department of Social Services to consider changing its rules regarding summer camp physician examination and immunization requirements to fit in with the Committee's recommendation of May, 1967: "(1) That if a physical examination has been given the child within a period of six months; (2) That if the child's immunizations are current; and (3) That if a child has not been exposed to recent communicable diseases, such examination of six months duration be considered adequate to cover the requirement of a physical examination prior to entering summer camp. This examination is not to exclude the health inspection given on the day the child enters the camp."

Due to increasing requirements and needs for better and closer liaison between physicians and schools and school board personnel, the Committee is recommending that The Council recommend to component societies that attempts be made to develop better local school health liaison; also, that The Council make known to the Michigan State Board of Education this interest on the part of physicians in Michigan with the suggestion that the State Board in turn recommend to all local school boards that a contact be made with the local county medical society, requesting the appointment of medical consultant(s) to the local school board.

A committee has been appointed to work with interested personnel from medicine, education and related fields, to study the problems and experiences in the Midland area with the use of the Wetzel screening system and to report back to the Committee. The Wetzel screening system in the Midland area in 1967 found that the average growth failure was 16 per 1,000 children examined.

The Committee has recommended that The Council take special note of the pre-pilot project being done in the Lansing schools to ascertain the number of dyslexia children and what can be done to help them. At the proper time, the Committee will publish in *Michigan Medicine* information regarding the dyslexia project and resulting recommendations.

Also considered by the Committee was Resolution 14 of the 1965 House of Delegates and the referral of the Resolution to it by the Liaison Committee with the Michigan State Pharmaceutical Association. Objection had been heard about the continuing use of charcoal as contained in the Poison Antidote Kit despite the fact that articles had been published recommending its use in certain instances of accidental poisoning.

The Committee is recommending to The Council that it approve the Committee's statement recommending the use of the Poison Antidote Kit, as sponsored by the Michigan State Pharmaceutical Association. In order to provide uniformity across the country, and to avoid conflict with the recommendations of the American Association of Poison Control Centers, the Committee feels that the charcoal contents of the kit, when used in accordance with proper instructions, constitute no extra hazard.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON DIABETES

William M. LeFevre, MD, *Chairman*

Since no matters were brought to the Committee during the past year, no meetings were held.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with the suggestion that the Committee explore the feasibility of closer liaison with the Medical Advisory Committee of the Michigan Diabetic Association.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON GOVERNMENTAL MEDICAL CARE PROGRAMS

Paul T. Lahti, MD, *Chairman*

The Committee was supplied with pertinent information by representatives of the Michigan Association for Regional Medical Programs, Michigan Department of Public Health and the Michigan Office of Economic Opportunity so that now the Committee can be of greater assistance in recommending appropriate MSMS coordination and cooperation. The Council adopted a recommendation that component medical society members be more active in every health planning organization concerned with medical care and its distribution. A list of organizations representing or involved with hospitals currently working in a socioeconomic field was prepared and distributed to all officers of component medical societies.

The Committee reviewed the 1967 amendments to the Social Security Act and is studying the Report of the National Advisory Commission on Health Manpower.

As a result of the Chairman's attendance at the National Conference on Health Care, the Committee was authorized to and did communicate with all federal/state agencies in Michigan involved in health care for the poor to offer to provide medical advice and consultative services. A recommendation to hold a statewide conference on health care for the poor as a part of the next MSMS Scientific Session was referred to the Ad Hoc Committee to Study the Medical Problems of the Disadvantaged in Cities.

The Committee continued its concern for physicians' reimbursement by all governmental agencies. The Council accepted a recommendation that "In the future, payments from all governmental agencies be on the same basis (the usual, customary and reasonable fee) as Title 18B-Medicare and that this recommendation be forwarded to all county medical societies for use in negotiating with local governmental agencies."

Attention was also devoted to matters related to extended care facilities, such as death certificates, stocking of emergency drugs, reports of radiologists' and physicians' visits, and length of stay.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended acceptance of the report commending the Committee for its diligent efforts.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON HIGHWAY INJURY

Paul W. Gikas, MD, *Chairman*

The Committee succeeded in securing approval to distribute Medi-Labels to responsible lay organizations as well as to physicians.

By request of the Secretary of State, the Committee was uniquely privileged to review the manner in which the Department evaluates medical statements as they relate to driver licensing, as well as the procedures used, to initiate a request for medical opinions. Informal meetings and liaison preceded the on-the-spot review and a critique was transmitted to the Department making appropriate suggestions for improved methodology.

The Committee continued its quest to upgrade the emergency medical transportation system. Discussions were held with appropriate state legislators and Department personnel offering strong support for the establishment of minimum standards for ambulances, ambulance drivers-attendants. Members testified before three special committee hearings and maintained continuous liaison.

The Committee was invited to recommend nominees for Executive appointments and handled a number of requests for information and assistance.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON IODIZED SALT

Brock E. Brush, MD, *Chairman*

During the past year, several attempts have been made to select a meeting date convenient to most of the members of the Committee and to the three representatives from The Council. A meeting was scheduled with five Committee members and two of the Council's representatives indicating they would be present. Those present felt it important to discuss the future program and purposes of the Committee and to make recommendations that might be considered by the 1968 House of Delegates.

The Committee recommended to The Council that the Michigan State Medical Society renew its efforts and take active leadership with material interest in the support of the education of the public and of the physicians in the State of Michigan to stress the need for using iodized salt to prevent endemic goiter, which, according to the studies of William H. Beierwaltes, MD, and his associates, of Ann Arbor, is a continuing and rising problem among the citizens of the State of Michigan.

At its meeting in June, The Council discussed the possibilities of: 1. including goiter under the Public Health Committee, and 2. the possibilities of MSMS legislative efforts to make iodized salt mandatory under state law. The Council agreed that both possible approaches should be explored further with the Committees on Public Health and on Legal Affairs.

Therefore, the future of the Committee on iodized salt rests with the recommendations resulting from a future joint meeting of the Committee on Iodized Salt, the Committee on Public Health, and the Committee on Legal Affairs. Our Committee would like to move ahead on these problems and do a more effective job. We are not satisfied with our progress of the past few years.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended approval of the report and encouraged favorable joint action by the Committees on Public Health and Legal

Affairs in the proposal to secure legislative action to insure continued success in this public health measure.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON LEGAL AFFAIRS

Otto K. Engelke, MD, *Chairman*

An extremely arduous year of legislative activity was completed on June 26, 1968 with the adjournment of the Michigan State Legislature. During six months of intensive activity the lawmakers in Lansing considered hundreds of health-related proposals, some of them of great significance to all practicing physicians. At the close of the session not one new law had been added to the Michigan Statutes which had been vigorously opposed by MSMS; on the other hand, the Society had strongly supported passage of fully as many bills as it had felt it necessary to oppose or seek to amend, and a large number of MSMS-endorsed bills were adopted to the benefit of the profession and the people of Michigan.

The Legal Affairs Committee commences to prepare for a legislative session immediately following each meeting of the House of Delegates. It has met on more than one occasion before the Legislature gathers in the State Capitol and it meets again several times during the session proper. In this past year activities have been thoroughly reported to the total MSMS membership through a half-dozen "Medigrams," special letters when required in emergencies, and many pages of articles in the centerfold of *Michigan Medicine*. A complete recapitulation of bills of interest was mailed to all members on June 4, at which time a new service was instituted making available to any physician who requested them copies of any newly enacted laws of particular interest to him.

It must be strongly emphasized that the success of MSMS' legislative effort is always due in large measure to the splendid response of the profession when it is called upon to speak to individual legislators about important proposals. MSMS members, during 1968, have been particularly alert and cooperative, and the State Legislature by and large has been courteously receptive to MSMS views. Much hard work must be done by those who are "on the firing line" every day, and many individual physicians have given generously of their time and expertise to come to Lansing to actually testify before committees. The fact, however, that increasingly physicians are taking an active interest in government, getting to know their own lawmakers, and expressing themselves regularly has strengthened a key ingredient in our legislative activity. The Committee wishes it could personally thank every member who has assisted during this past year.

Finally, the Committee would point out that a new State Legislature will be elected a little over a month after the 1968 House of Delegates meeting. Being so intimately associated with the importance of volume of legislative activity, the Committee would most strongly urge every physician, as an individual citizen, to evaluate the political candidates in his community and support, in any way possible, those whom he considers best qualified to make the laws of our State.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended approval of the report congratulating the Committee for an excellent job.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MATERNAL HEALTH

James E. Harryman, MD, *Chairman*

The Central Maternal Mortality Review Subcommittee has continued its review of maternal deaths in Michigan and has been greatly aided by the large percentage of autopsies performed.

The Perinatal Morbidity and Mortality Subcommittee has distributed three Perinatal Newsletters during the past year, and has provided information and help to Michigan hospitals wishing to participate in the Michigan Perinatal Mortality Study.

The Lay Education Subcommittee served as the motivating force in the successful adoption of legislation to permit the teaching of family life and sex education in Michigan's schools. The Committee will continue to serve in an advisory capacity to the Michigan Department of Education, and to other groups involved in setting up the curriculum for the teaching of family life and sex education. In addition, the Committee plans a Family Life Education Workshop for representatives of component societies next October.

The Medical Liaison Committee continues its publication of Desk Reference Cards and has received the approval of The Council to reprint all 10 cards in a future issue of *Michigan Medicine* and to print future cards in this manner.

The Maternal Mortality Tissue Registry Subcommittee hopes that it will be possible to have a complete report assembled by the end of 1968. The report will include study sets of significant pathology with Kodachrome slides and text. The year 1968 marks the Tenth Anniversary of the Registry.

The Annual Maternal Health Conference Subcommittee held another very successful Maternal Health Conference in Flint in March. The Annual Report of The Council contains a report on this meeting. The Committee is grateful to the Clara Elizabeth Fund of Flint for its continued interest and tangible help in co-sponsoring the Flint Maternal Health Conferences.

The Committee continues its cooperation with the Michigan Department of Public Health, Bureau of Maternal and Child Health, in efforts toward better utilization of obstetrical hospital beds.

Other matters discussed by the Committee during the past year: Michigan perinatal and infant mortalities; prematures and what kills them; RH immunoglobulin; training in obstetrical care and delivery for all physicians accepting patients for such care; the bringing together of physicians, hospital board members and hospital administration to discuss the combined responsibility of obstetrical care; the need for more hospital perinatal study officers and review committees; the training of more nurses for obstetrical care; and Michigan's abortion laws and other legislation of concern to the Committee.

The Committee expressed appreciation to William W. Jack, MD, for his good work as Chairman of the Committee for many years, and sadness and great loss in the death of Arthur C. Rutzen, MD, a long-time member of the Committee and the newly appointed Chairman at the time of his death.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended approval of the report with highest commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MEDICAL SOCIO-ECONOMICS

Dale L. Kessler, MD, *Chairman*

Long Range Planning Project. The following position papers have been received and published in *Michigan Medicine:*

1. "The Future of Health Insurance, Prepayment and Medicine — A View of 1985," by Charles P. Hall, Jr., Ph.D.
2. "The Outlook for Group Practice — Prepayment Direct Service Plans During the Next 20 Years," by Caldwell B. Esselstyn, MD.

3. "The Medical Profession and the Public: An Examination of Interrelationships," by Odin W. Anderson, Ph.D.

Additional papers have been received or are under contract and will be published within the next several months. They are:

1. "The Future of Private Practice: Salvation at the Grassroots," by Lewis A. Miller
2. "Medical Facilities and Medical Practice 1985," by Ray E. Brown.
3. "The Influence of Government Fiscal Agents on the Future Practice of Medicine," by Thomas B. Fitzpatrick.

After all the papers have been published in *Michigan Medicine,* reprints will be sent to each state medical society. It is hoped that this will result in the development of new approaches and programs by organized medicine to meet the challenges that medicine will face. Also, the Committee will conduct workshops around the state to focus the attention of component medical societies on the future.

The Committee is pleased to report that Charles Hall's paper on "The Future of Health Insurance and Prepayment" was selected by a jury representing the American Medical Association, the American Medical Writers Association and the National Association of Blue Shield Plans as the most scholarly contribution to the literature of medical economics for the year ending June 30, 1967. Doctor Hall was presented the Norman A. Welch MD Award by the N.A.B.S.P. for his achievement.

Survey of Fees in Wayne County. Upon the recommendation of the Committee, The Council approved a request from the Wayne County Medical Society that the Committee conduct a survey of fees by specialty and type of practice in Wayne County. This survey is underway. The results should be of significant value to physicians, not only in Wayne County, but throughout Michigan.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MEDICINE AND OSTEOPATHY

John J. Coury, MD, *Chairman*

This Committee again had a busy year in its attempts to formulate policies that would resolve the problem of Medicine and Osteopathy.

Our major efforts concerned 1) the development of a proposed single medical practice act for Michigan and 2) obtaining changes in the policies of AMA that would permit qualified osteopaths to participate in AMA-approved internship and residency programs.

The Committee worked closely with the MSMS Committee on Legal Affairs and MSMS Legal Counsel in drafting a new medical practice act that would place both MDs and DOs under one licensing board. The details will be presented to the House of Delegates in a separate report.

Resolution 60 (Acceptance of Osteopaths as Residents and Interns) of the 1967 MSMS House of Delegates was presented at the June meeting of the AMA. Although the resolution was not adopted, it will be considered by the AMA Council on Medical Education, which is studying this entire matter.

This concept is condemned by the American Osteopathic Association, but it has engendered a great deal of interest and support by the younger practicing osteopaths.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report, commending the committee for its farsightedness and sincere efforts in resolving one of the most difficult problems of the times.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MENTAL HEALTH

Benjamin Jeffries, MD, *Chairman*

The Committee appointed a representative to a special state legislative committee to study admissions, commitment procedures, and reimbursement rates for mentally ill children, adolescents and adults. Reviewed were the problems of drug purchases for indigents, abortions, and the Department of Mental Health's activities in Act 54 programs (Community Mental Health Service).

The Committee discussed the Psychologists Registration Act, heard a progress report on the new Forensic Center, and recommended its completion before the Department implements a proposal for joint facilities with the Department of Corrections. A report was given that the State Legislature is attempting to repeal the sexual psychopathic law.

The Committee reiterated a previous position that the Department of Mental Health initiate a cost for service basis instead of the current billing procedure of per diem rate charges. Also discussed were the financial liabilities of relatives of committed patients, a strategem to liberalize abortions, and a joint meeting with appropriate state legislators in late 1968. The Committee voted to continue an in-depth study of Strategy for Planned Educational Change (SPEC) after hearing a report.

Other matters reviewed and discussed were the use of generic equivalent prescriptions by state agencies, the 14th Annual Conference of State Medical Society Mental Health Representatives, community psychiatric centers, the future of large mental hospitals, the continuing problems of community mental health service programs, planned workshops in community psychiatry, legislative activities in mental health, mental retardation, alcoholism and drug abuse.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON OCCUPATIONAL HEALTH

William Jend, Jr., MD, *Chairman*

During the past year the Committee on Occupational Health was involved in the following matters:

1. *Review of written materials on Workmen's Compensation.* The Committee reviewed publications from other state occupational health committees and also studied the Wisconsin Occupational Health Guide with a view to similar publications in Michigan.
2. *Survey of county societies to determine which had an occupational health committee.* The Committee found that very few county societies had such committees, and deplored this condition in a major industrial state.
3. *Consultation with the Michigan Department of Labor.* This state agency asked for the advice of MSMS in developing physical examination standards for operating engineers. Subsequently, the Committee discussed informally with department officials in Lansing possible standards to assure maximum safety for the operator and the people who are working with him. Practical considerations in implementing such standards were also discussed.
4. *Consultation with the Department of Civil Service.* This agency requested MSMS help in formulating a physical examination benefit as part of a group health plan and, as with the Department of Labor, the Committee met informally with Civil Service officials in Lansing to discuss possible ways to achieve the objectives the department has in mind.

   The Committee is currently planning a meeting with the MSMS Committee on Alcoholism and Drug Dependence to discuss the problem of alcoholism in occupational health.

Also a future meeting will be planned with the Michigan Academy of General Practice to discuss matters of common concern.

In addition, the Committee will continue to help in the development of a possible program involving pre-employment medical examinations for MSMS employees.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON POSTGRADUATE MEDICAL EDUCATION

Harry A. Towsley, MD, *Chairman*

During the year 1967-68, the Committee on Postgraduate Medical Education of the Michigan State Medical Society provided 37 programs in continuing medical education in 20 centers distributed geographically throughout the state; 12 were in the lower peninsula and 8 in the upper peninsula.

Registrations for the spring and fall sessions totaled 1,033 physicians of which 637 attended both the fall and spring meetings. Twenty-three of the programs held were combined live clinics with didactic presentations; fourteen presentations were didactic lectures only. Thirty-nine faculty members representing Michigan State University, the University of Michigan and Wayne State medical schools participated in these programs.

The Committee on Postgraduate Medical Education is deeply indebted to those faculty members who, with dedicated services, made possible continuing education for physicians enabling members of the State Medical Society to continue their education in the medical sciences at their own doorstep.

The Committee has repeatedly expressed its conviction that the greatest value is received from programs where clinical conferences with presentation and discussion of patients' problems in the local community are available.

During the year, one new center was added to the list: Livingston County. It is noteworthy that in Howell, Michigan, their program was attended by 43 physicians. There are 21 physicians who are members of the Livingston County Medical Society. The Committee wishes to recognize the sincere efforts put forth by the members of the Livingston County Medical Society in encouraging members of other county medical societies to attend this meeting.

Following is a list of faculty members and others who contributed to the program:

Richard J. Allen, MD
Thomas A. Bruce, MD
Oswald V. Clark, MD
Ralph J. Coskey, MD
Arthur C. Curtis, MD
Thos. J. DeKornfeld, MD
Reed O. Dingman, MD
Earl R. Feringa, MD
Stuart M. Finch, MD
F. Bruce Fralick, MD
A. James French, MD
Robert H. Gregg, MD
E. Richard Harrell, MD
Ruth Heyn, MD
Roland G. Hiss, MD
Robert B. Jaffe, MD
Benjamin Juliar, MD
Richard D. Judge, MD
Robert C. Kelsch, MD
George H. Koepke, MD
Richard O. Kraft, MD
S. M. Lindenauer, MD
Paul Lowinger, MD
George H. Lowrey, MD
Kenneth R. Magee, MD
George W. Morley, MD
Reed M. Nesbit, MD
Norman D. Nigro, MD
William R. Olsen, MD
Ananda Prasad, MD
Stewart E. Pursel, MD
Richard C. Schneider, MD
Edwin M. Smith, MD
Scott N. Swisher, MD
Harry A. Towsley, MD
Neal A. Vanselow, MD
David Watson, MD
Park W. Willis III, MD
Robert Wilson, MD
Walter P. Work, MD

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON PROFESSIONAL INSURANCE PLANS

Fredrick Weissman, MD, *Chairman*

Improvements in the MSMS Group Disability Plan. Several improvements in the MSMS Group Disability Plan were worked out by the Committee and the Provident Company. These include: (a) a reduction of premium for the the lowest age group (under age 34), (b) an increase in the available maximum indemnity from $500 to $1,000 monthly, (c) an insurability guarantee provision, (d) an extension of the disability benefit period for members under age 50 from age 65 to lifetime.

Disability Insurance for Employees of MSMS Members. This new group program, as developed by the Committee and approved by The Council, went into effect on April 1, 1968. The plan is underwritten by the Provident Life and Accident Company. It provides monthly cash benefits for enrolled employees of MSMS members who become disabled because of accident or sickness. A one-year accident — one-year sickness plan or a five-year accident — two-year sickness plan is available.

Adoption of New Blue Cross and Blue Shield MVF-2 Package Program. The Council on June 5, 1968, approved this Committee's recommendation that MSMS adopt the new Blue Cross and Blue Shield MVF-2 package. This program replaces the present M-75, and Over-65, group health programs available to MSMS Members. It offers an expanded scope of benefits and becomes effective August 1, 1968.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON PUBLIC HEALTH

Oscar D. Stryker, MD, *Chairman*

Smoking and Health. The Committee heard reports from the Committee on Public Relations and from the Michigan Council on Smoking and Health and very thoroughly discussed an educational program for physicians and the public on smoking and health. Because The Council had requested that a Task Force be appointed to set forth recommendations regarding such an education program, and because the Committee on Cancer had also recommended this be done, the Committee on Public Health assumed the responsibility and leadership in setting forth a recommended program of education that can be presented to The Council and subsequently referred to the Committee on Public Relations, the Public Relations Department, and the Michigan Council on Smoking and Health.

The Committee has requested the help of the Committee on Cancer and the Committee on Respiratory Diseases, and will submit its recommended program to The Council in the near future.

Radiation. The Committee has the addition of two advisors, R. C. Hildreth, MD, and J. E. Lofstrom, MD, to serve as liaison with the Radiation Section of the Michigan Department of Public Health.

The Committee is in favor of protecting the public and physicians from the hazards of defective radiation equipment, and has recommended that in problem cases the

Radiation Section of the Michigan Department of Public Health, consult with the Committee's Advisors on radiation who in turn can contact the physician in person or notify the local county medical society of the violation and if, after a contact is made, the physician still fails to comply with the regulations, that the Department contact the local law enforcement people.

Mumps and Measles Vaccines. The Committee discussed this matter with George H. Agate, MD, Chief of the Division of Epidemiology of the Michigan Department of Public Health, and requested him to write an article for *Michigan Medicine* on the "Pros and Cons of Mumps vaccine. Doctor Agate reported that there were no changes in the measles vaccine restrictions, and that the Michigan law will pretty much eliminate measles in this State within the next three years.

Screening Programs. The Committee reviewed the action taken by the 1967 House of Delegates regarding screening programs, and recommended to The Council that Item 3 of the "Guidelines for Health Screening Tests" be deleted inasmuch as screening procedures are being done in hospitals, by non-tax-supported institutions, and in some physicians' offices, and a fee is charged. The Council approved the re-wording of Item 3 in the "Guidelines."

Whooping Cough. The Committee reviewed the work being done in Michigan in connection with whooping cough in pre-school age children and those in the upper grades in high schools, and the attempts to work out a system where florescent antibody and culture tests are made available to all physicians.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON PUBLIC RELATIONS

Brock E. Brush, MD, *Chairman*

Workable, realistic public relations projects were developed and carried out this past year by the MSMS Committee on Public Relations and MSMS staff members — working closely with MSMS officers and committees, and also with component society officers and local public relations committees.

The Report of The Council includes brief references to several MSMS public relations and communications efforts.

The state committee this past year again sought to develop broad guidelines that the staff could implement by working with newspaper reporters and editors, with radio and TV executives and staffers, with printers and artists, with educators, with civic leaders, with politicians and elected state and federal officials, etc.

Career Recruitment: Every day this past year MSMS has been involved with continuing efforts to inform young people and their parents about the excellent career opportunities in medicine and health. MSMS again provided staff assistance and financial support to the Michigan Health Council for the continuance of its Health Careers Mobile. The Health Careers Mobile, with many new exhibits, visited county fairs, schools, college campuses, hospitals and spent considerable time in the Detroit inner city. Equally as important, MSMS continued its distribution of the authentic AMA "Horizons Unlimited" career handbook. Hundreds of books, with the eight special insert pages of Michigan information, were distributed to schools, colleges, youth-serving clubs and agencies, county health departments, and other outlets. Radio tapes, news releases, etc., all supplemented the MSMS desire to increase the health manpower available to serve the people of Michigan.

1967 Community Health Week: MSMS cooperated again with the AMA-sponsored Community Health Week, with the support in Michigan of the Michigan Health Council and the Michigan Association of the Professions. Major focus was on Michigan health manpower needs, with several county medical societies cooperating to present local programs before schools and with civic groups.

Quackery Education: MSMS sponsored two quackery education conferences this past year, one in Detroit during the MSMS Conference on Michigan Health Planning, and the other in Lansing for invited leaders from the Legislature, agencies, health organizations, etc. The MSMS Council in June adopted a new program in quackery education to reach Michigan children and adults.

Other Special Education Efforts: The Public Relations Committee and staff worked closely with several MSMS committees during the year in educational efforts. Informed physicians were placed before conventions and on radio and television programs, and copy was prepared especially for newspapers and magazines. The subjects included eye care, examinations for campers, pap tests, measles, inoculations, mental health, medical aspects of sports, abortion, poison, smoking-health, driver safety, and others.

Michigan Association of the Professions Formula Television Program: The PR Committee recognizes the many medical-related programs that have been produced by MAP over its weekly Formula television program over WJIM-TV in Lansing. Many MSMS officers and MSMS members, expert in various fields, have appeared as guests with Moderator Hugh W. Brenneman on the TV program.

Liaison with Woman's Auxiliary to MSMS and the MSMAS: Both the state Woman's Auxiliary and the Michigan State Medical Assistants Society provided MSMS with valuable assistance in legislation, education, and communications. The state Auxiliary and the local units were especially helpful again in career recruitment and the Medical Assistants worked to improve physician-patient relationships.

Distribution of Pamphlets and Films: Seldom did a week go by this past year that MSMS did not provide an educational film for some school assembly or civic meeting, or that MSMS did not distribute educational printed materials to teachers, professors, ministers, club leaders, legislators. As in the past, MSMS took advantage of the many fine publications produced by the AMA, Michigan Health Council, Michigan Council on Smoking and Health, AMPAC, etc. The films were utilized from the universities, national health associations, government, etc.

MSMS Radio Tape Series: MSMS continued to produce and mail 15-minute tapes about medicine and health each week to about 40 Michigan and midwest radio stations, thanks to the efforts of the MSMS Committee on Scientific Radio and WUOM at the University of Michigan. MSMS members discussed medical matters and good health practices. This is one of many on-going, quality MSMS public relations efforts that many physicians know little about.

Newspaper Cooperation: Almost every week, MSMS sent news material to Michigan newspapers, and to special writers from magazines and out-of-state newspapers. Close contact was maintained again with the 20 scientific writers on Michigan newspaper staffs.

Health-O-Ramas: MSMS and the three county medical societies in the large Detroit metropolitan area cooperated with the Michigan United Fund to support the career recruiting efforts of the four Health-O-Ramas held in the Detroit area. The Health Careers Mobile was a feature at each of the four week-long civic events.

Summary: The MSMS Public Relations Committee is proud of its work and efforts in so many different fields, and appreciates the excellent support it received this past year.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON RESPIRATORY DISEASES

Richard A. Rasmussen, MD, *Chairman*

The Committee met with a representative of the Michigan TB and Respiratory Disease Association and reviewed mutual programs of medical and professional education and will cooperate in a program to emphasize to physicians the advantages of TB testing and prophylactic treatment of TB patients in physicians' offices.

The Committee is cooperating with the Committee on Public Health and the Committee on Cancer in formulating an educational program on cigarette smoking and health for presentation to The Council.

In the smoking and health field, the Committee is concerned with the education of school children and the cooperation of physicians in giving talks on this subject; has recommended full cooperation with the various groups and organizations having money to help in the education of the general public; and will consider ways of encouraging clean-up of cigarette advertising via publications, radio and television, especially when such advertising is aimed at youth.

The Committee has recommended that its original statement on air pollution previously approved by The Council be re-affirmed:

> "The Michigan State Medical Society, through its Committee on Respiratory Diseases, officially endorses the principle of reasonable and scientific study directed toward the sensible control of the major problems of air pollution, whether this be the dusts or wastes of industry, the products of combustion of gasoline or oil (automobiles) or the combustion products of home heating and burning equipment, or of smoking tobacco. All of these may have potential effect on man via the respiratory system and are, therefore, of concern to the physician, especially as they are known to affect health adversely."

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON RURAL MEDICAL SERVICE

Robert E. Rice, MD, *Chairman*

The Committee has cooperated with the Michigan Health Council in its placement program, promoted the health career mobile, endorsed and implemented community health week, and attempted to influence the educational environment to improve the image of general practice and promote understanding of the realities of practicing in various sized communities. Resolutions were made promoting the training of personnel for emergency medical services and asking the medical schools to adopt preceptorship programs. The Committee is co-sponsoring, with the Michigan Health Council, a study as to why physicians choose their areas of practice and why they do not go to others. Other activities included the attendance and sponsorship of career conferences.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON SCIENTIFIC RADIO AND TELEVISION

William J. Ledger, MD, *Chairman*

This report is limited to a report on the radio program "Prescription for Health." This is a weekly fifteen minute program that had been sponsored by the State Medical Society. It is carried by at least fifteen radio stations in the State of Michigan. During the past year, the interviews have focused upon a number of problems of current medical interest. We have had programs on the problems of marijuana and LSD, genetics, the problems of septic abortion, newer forms of contraception, organ transplantation, obesity, inherited anemias, poisoning in the home, hearing defects, and current management of erythroblastosis fetalis. This wide range of subject material, I believe has been of interest to the listening public. In the future year, we plan to do a series on some medical implications of the traffic accident problem in this country. It is hoped that this will be an interesting and provocative series for the listeners.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report and urged the Committee to expand its efforts to include more stations and to make attempts to seek prime air time for its programs.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON THERAPEUTIC ABORTION

Howard R. Williams, MD, *Chairman*

Immediately subsequent to the adoption in 1967 of Resolution No. 40, as amended, directing that MSMS "work toward the revision and liberalization of the Michigan abortion laws," the House of Delegates recommended a formation of an MSMS ad hoc committee to review all available studies on the subject of therapeutic abortion and requested a report of findings to the 1968 House of Delegates.

The Delegates adopted the following reference committee report:

"In the opinion of your Reference Committee:

"1. Since therapeutic abortion is a current medical issue;

"2. Since therapeutic abortion is a departure from some medical philosophic concepts;

"3. Since therapeutic abortion is an emotionally charged issue;

"4. Since the subject of therapeutic abortion has been studied by: a) The American Law Institute; b) the American Medical Association, and those states in which a new program has been activated; c) by the American Psychiatric Association; d) by the Michigan Bar Association; e) and since a tentative position has already been rendered by MSMS in its August 28, 1967 testimony before our State Legislature;

"Your Reference Committee recommends the formation of an MSMS ad hoc committee to formulate a position statement on therapeutic abortion, incorporating all of the above studies, and to report their findings to this House of Delegates at its next regular session."

This ad hoc committee was duly appointed by the President of MSMS and, as charged, reviewed pertinent recommendations developed by the American Medical Association, the Michigan State Bar, the American College of Obstetricians and Gynecologists and several others. Legislation in this area unsuccessfully presented to the 1967 Michigan State Legislature was also studied, along with the testimony given thereon by affected state agencies and interested private groups and individuals.

Having considered the subject in depth, the committee discussed it in great detail and consonant with its charge by the House of Delegates and the President of MSMS recommends that the following statement on the liberalization of abortion laws be adopted by the 1968 House of Delegates as the present policy of the Michigan State Medical Society in regard thereto:

"Therapeutic abortion is a medical procedure. Accordingly, the Michigan State Medical Society recognizes its responsibility to render available scientific medical information with respect to therapeutic abortion to legislators, authorized committees, the public and, finally and most importantly, patients. Nowhere in the progression of therapeutic abortion legislation or practice should sight be lost of the fundamental principle that the primary decision belongs to the patient. This decision must be based upon an informed understanding of the nature and consequences of the therapeutic abortion, and should be coupled with the informed consent of the husband, if any, and the parents and/or legal guardian if the patient is a minor.

"The Michigan State Medical Society respectfully recognized that some physicians, because of moral or religious grounds, oppose liberalization of the therapeutic abortion laws. Therefore, no physician should be compelled, directly or indirectly, to perform a therapeutic abortion.

"In view of the above, the Medical Society believes that therapeutic abortion should be legally authorized subject to the following conditions:

"1. The procedure must be performed in a hospital licensed by this state; and

"2. Two other physicians, who must be medical doctors or doctors of osteopathy licensed in this state, chosen because of their recognized professional competence, must examine the patient and concur in writing that one of the three following conditions exists: a) There is documented medical evidence that continuation of the pregnancy may threaten the health or life of the mother, or b) There is documented medical evidence that the infant may be born with incapacitating physical deformity or mental deficiency, or c) There is documented medical evidence that continuation of a pregnancy, resulting from alleged statutory or forcible rape or incest, may constitute a threat to the mental or physical health of the patient, and the prosecuting attorney of the judicial district in which the alleged rape or incest occurred attests in writing over his signature that there is cause to believe that the alleged violation did occur."

The foregoing statement, it will be noted, emphasized the affirmative in certain circumstances as contrasted with a statement opposing therapeutic abortion except under certain circumstances. The ad hoc committee recommends that this statement be approved by the House of Delegates.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, considered the reports and recommended adoption of the first seven paragraphs and acceptance of the remaining paragraphs, as amended, as follows:

> **In view of the above, the Michigan State Medical Society believes that therapeutic abortion may be authorized subject to the following conditions:**
>
> **1 — A licensed medical or osteopathic physician perform the abortion in an accredited hospital licensed by the State.**
>
> **2 — Two other doctors of medicine or osteopathy concur in writing that one of the following conditions exists:**
>
> - **a) The abortion is deemed necessary to preserve the life of the pregnant female; or**
> - **b) The abortion is deemed necessary to preserve the physical or mental health of the pregnant female; or**
> - **c) That the infant may be born with incapacitating physical deformitory or mental deficiency; or**
> - **d) That three doctors of medicine or osteopathy believe that the pregnancy resulted from forcible rape or incest.**
>
> **3 — MSMS does not condone the concept that an abortion be performed on demand for any unwanted pregnancy or as a means of birth control. We do believe, however, that in determining whether or not there is a risk to the pregnant woman's life or health, account must be taken of the patient's total environment, considering such factors as parity, contraceptive failure, socio-economic stress, or marital or family stress when a woman does request a therapeutic abortion.**

The foregoing statement, it will be noted, emphasizes the affirmative in certain instances as contrasted with a statement opposing therapeutic abortions except under certain circumstances.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON VENEREAL DISEASE CONTROL

Frank B. Bicknell, MD, *Chairman*

1966-67 Committee Activity. The Committee's meeting of last year resulted in four of its recommendations being disapproved by The Council, with one recommendation referred back to the Committee.

The Committee's recommendation concerning serologic reporting of every positive STS still does not meet with the approval of The Council and will be reconsidered by the Committee at its next meeting.

The Committee agreed with The Council's disapproval of its recommendations concerning the reporting of venereal disease to local health departments and the requirement that all admissions to the in-patient services of hospitals receive an admission blood test for syphilis.

In considering last year's recommendation regarding the Government of Michigan recognizing its responsibility in the diagnosis, treatment and control of venereal disease, and to make meaningful appropriations toward this end, the Committee adopted a new recommendation, as follows: "Because 50% of the cases of reported gonorrhea and 84% of the reported cases of infectious morbidity of syphilis, come from the City of Detroit, and because the State of Michigan, at this time, provides only 0.5% of the financial support for the venereal disease control program in the City of Detroit, it is apparent that the City of Detroit suffers from a shortage of financial help. In addition, it appears that other local health departments, county and city, also suffer from a shortage of space, personnel and equipment, to deal with the ever expanding problems of venereal disease control, and that federal and local resources have proven to be inadequate. Therefore, the Committee requests The Council to recommend to the Michigan Department of Public Health that it involve itself, to a greater degree, in the control of venereal disease." This recommendation of the Committee was approved by The Council.

Educational Articles. The Committee has arranged for its members to submit articles and news notes for publication in *Michigan Medicine* and the other MSMS publications. The Committee has also recommended that the MSMS Public Relations Department continue the educational thrust done in October and November of 1966.

THE REFERENCE COMMITTEE on Reports of Standing and Special Committees, H. A. Towsley, MD, Chairman, recommended acceptance of the report with commendation.

THE HOUSE adopted the report of the Reference Committee.

19. Reports of House of Delegates Committees

COMMITTEE ON CERTIFICATES OF COMMENDATION

Marjorie Peebles Meyers, MD, *Chairman*

The MSMS House of Delegates established the "MSMS Certificates of Commendation" at its 1961 session. The Delegates instructed that the awards "may include both scientific and/or public service, and may be awarded to one or several physicians annually who distinguish themselves in the medical profession."

The 1962 House of Delegates presented the first such "Certificates of Commendation" to four distinguished Michigan doctors of medicine who had been recommended by the House of Delegates Committee. The first four honorees were Jerome W. Conn, MD, Ann Arbor; G. D. Cummings, MD, Lansing; Charles S. Kennedy, MD, Detroit; and Robert L. Novy, MD, Detroit.

In 1963, the House of Delegates approved the report of the Committee and presented Certificates to Forest D. Dodrill, MD, Bloomfield Hills; Charles J. Jentgen, MD, Detroit; John M. Sheldon, MD, Ann Arbor; and Homer H. Stryker, MD, Kalamazoo.

The 1964 House of Delegates acted to present the certificates to Goldie B. Corneliuson, MD, Lansing; John S.

DeTar, MD, Milan; Robert Heavenrich, MD, Saginaw; Norman F. Miller, MD, Ann Arbor; E. Gifford Upjohn, MD, Kalamazoo; and Orus R. Yoder, MD, Ypsilanti.

In 1965, the House of Delegates approved Certificates to Fred J. Hodges, MD, Ann Arbor; Traian Leucutia, MD, Detroit; and Remus J. Robinson, MD, Detroit.

In 1966, the House presented awards to Arthur C. Curtis, MD, Ann Arbor; Lionel L. Davis, MD, Mt. Pleasant; Mark Marshall, MD, Ann Arbor; Harold J. Meier, MD, Coldwater; Ralph H. Pino, MD, Detroit; Alfred B. Swanson, MD, Grand Rapids; and Harry A. Towsley, MD, Ann Arbor.

The 1967 House of Delegates presented Certificates of Commendation to Frank J. Busch, MD, Saginaw; W. H. Huron, MD, Dickinson-Iron; Frederick Margolis, MD, Kalamazoo; David Sugar, MD, posthumously, Wayne; Raymond W. Waggoner, Sr., MD, Washtenaw; Charles H. Wright, MD, Wayne.

This year the Committee is proud to present for the consideration of the 1968 House of Delegates the names of five distinguished Michigan doctors of medicine for Certificates of Commendation. They are, alphabetically, A. Fleming Barbour, MD, Genesee; Harry L. Clark, MD, Mason; John M. Dorsey, MD, Wayne; Fred C. Sabin, MD, Marquette; and Wilbur D. Towsley, MD, Midland. Each was nominated by his county medical society, and was considered by the Committee along with other county nominations.

* * *

Brief biographic information follows about each man:

A. FLEMING BARBOUR, MD, Genesee

Born Elkhart, Indiana, July 28, 1909; Pre-medical education, Michigan State University, 1932; Medical degree, University of Michigan, 1936; Internship, Hurley Hospital, Flint; Residency, University of Michigan Hospital; Postgraduate, Rackham Graduate School, University of Michigan; MS Degree in Ophthalmology.

Twenty-eight years in practice in Flint; specialty Ophthalmology.

Hospital staffs: Hurley, Chief of the Department of Ophthalmology; also on McLaren and St. Joseph Hospital staffs.

Lieutenant Commander, U. S. Navy, 1943-46.

Medical Memberships: Member, Genesee County Medical Society, President in 1953-54; Member, AMA and Michigan State Medical Society; Member, American Board of Ophthalmology, American Academy EENT, Detroit Ophthalmology Society, Saginaw Valley EENT Association; Past President of Flint Academy of Surgery.

Community Service: Now State Chairman of YMCA World Services Program; Vice-Chairman, Board of Trustees of the Court Street United Methodist Church in Flint; Vice-President, Flint City Club. Former President of the following organizations — Flint Red Feather Fund; Greater Flint Council of Churches; Flint Committee on Alcoholism; University of Michigan Club of Flint. Former member of the following boards of Directors — Genesee County Chapter of the American Red Cross, Flint Family Service Agency, Flint Chamber of Commerce, Citizens Advisory Committee to Flint Board of Education, and other groups. He is a private sponsor of the Flint College and Cultural Development Program.

HARRY L. CLARK, MD, Mason County

Born Kingsville, Ohio, October 8, 1886; University of Michigan Literature School, 1906-1907; attended Medical School 1907-1909, leaving to teach high school for four years, assistant to Doctor Carl Huber in U. of M. Anatomy Department 1913-1917; completed A.B. in 1915, his A.M. in 1918 and his Medical Degree in 1919.

Following graduation from medical school, Doctor Clark became assistant professor of pathology and bacteriology at the Detroit College of Medicine in March 1919; appointed professor of bacteriology and clinical pathology in 1922 and continued until 1949, when appointed professor emeritus of that WSU department.

From January 1949 until 1957, Doctor Clark was director of clinical laboratories at Hackley Hospital, Muskegon; from 1957-1967, he was director of the laboratory at Paulina Stearns Hospital in Ludington; now is medical director of the Mason County Medical Care Facility.

Medical memberships; now president of the Mason County Medical Society; formerly a member of the Wayne County Medical Society and the Muskegon County Medical Society; active in other medical groups.

Member, Rotary Club, Masons, Shrine, Elks. Honored as "Optimist of the Year" in 1962 at Ludington.

JOHN MORRIS DORSEY, MD, Wayne County

Born Clinton, Iowa, November 19, 1900; Pre-medical education, University of Iowa with B.A. and M.S. Degrees; Medical Degree, University of Iowa, 1925; Internship, University of Iowa Hospital; Residency, University of Iowa Hospital; Postgraduate education, University of Vienna in psychiatry.

Hospital Affiliations: Harper, Receiving, Children's, Veterans Administration Hospital; Chief of Staff at McGregor Center.

Joined Wayne State University Medical School faculty in 1946; former professor and chairman, Department of Psychiatry. Now, "WSU University professor."

Author of Foundations of Human Nature, Living Consciously, Illness and Allness, The Growth of Self Identity, and many scientific articles.

Advisory psychiatrist to the Detroit Youth Commission.

FRED C. SABIN, MD, Marquette County

Born in Little Falls, N. Y., May 6, 1924; A. B. Degree from Syracuse University, and MD Degree from Albany (N.Y.) Medical College; M.S. Degree in ophthalmology from the Mayo Clinic and the Graduate School of the University of Minnesota; Fellow in ophthalmology at the Mayo Clinic from 1954 to 1957.

Served in U. S. Army, 1943-46, including 18 months in European Theatre.

Has practiced in Marquette since 1957. Affiliated with St. Lukes and St. Marys hospitals in Marquette.

Past President of Marquette-Alger County Medical Society; member of AMA and MSMS; Diplomate of the American Board of Ophthalmology, a Fellow of the American Academy of Ophthalmology and Otolaryngology.

Member of the Northern Michigan University Board of Trustees; member of State Board of Registration in Medicine; past chairman, Marquette County Republican Committee; former board member, Marquette Chamber of Commerce; member, Rotary Club, American Legion, Mason.

WILBUR DEAN TOWSLEY, MD, Midland County

Born June 7, 1897, Midland, Premedical Education, Kalamazoo College, B.S. Degree; Medical Degree, University of Michigan 1923; Internship, Grace Hospital, Detroit.

Has practiced in Midland 45 years. Father was Frank A. Towsley, MD, pioneer Midland physician; his brother, Harry A. Towsley, MD, is professor of pediatrics and chairman of the department of postgraduate medicine at the University of Michigan; and his brother, Charles Towsley, DDS, is a dentist in Midland.

Medical Memberships: Midland County Medical Society, President in 1936; Member of MSMS and AMA.

Served on State Boxing Commission in 1939.

Served on Midland Selective Service Board for more than 10 years.

Member of Midland Rotary Club for 36 years and Midland Elks.

Received "Book of Golden Deeds" award from the Midland Exchange Club, in 1962, when he was cited for having delivered more than 6,000 babies in Midland County, for helping many children and families in financial need, and for helping many students through medical school.

Keenly interested in fishing and hunting, Doctor Towsley is a Life Member of the Midland County Sportsman Club and a member of the Michigan United Conservation Club.

THE HOUSE, acting as a committee of the whole, adopted the report of the Committee.

COMMITTEE ON CONSTITUTION AND BYLAWS

Robert S. Ideson, II, MD, *Chairman*

Proposed Amendments re Procedures for Amending Bylaws. Following the one-day Special Session of the House of Delegates in February, 1968, when the Bylaws were amended, The Council received suggestions that existing amendatory provisions of the Bylaws be reviewed. Legal Counsel was asked to suggest clarifying language and the entire matter was referred to the Constitution & Bylaws Committee.

The Committee concluded that the founding fathers probably intended that amendments really be put over for studied consideration and did not envisage the House holding two meetings minutes apart for the purpose of amending the Bylaws.

Therefore the Committee recommends the following amendments to Chapter 9, Section 1 — Amendments: (New language in caps)

> Sec. 1 AMENDMENTS — PROCEDURE — These Bylaws may be amended by a majority vote of the delegates seated, after the proposed amendment is laid on the table UNTIL THE NEXT SESSION, UNLESS, BY UNANIMOUS CONSENT OF THE DELEGATES PRESENT AND VOTING, SUCH TIME REQUIREMENT IS WAIVED, IN WHICH EVENT THE SAID AMENDMENT MAY BE VOTED UPON AT THE NEXT ~~for one~~ meeting of the House of Delegates. THE AMENDMENT OR AMENDMENTS TO these Bylaws ~~and any amendments thereto~~ become effective immediately upon adoption.

Proposed Review of Constitution. It became evident during the 1968 Special Session that there were apparent language conflicts between the MSMS Constitution and its Bylaws. So much confusion existed that Legal Counsel had to interpret points in each document for the benefit of the entire House. He stated to the Delegates at that time that the Constitution, written when MSMS was organized, properly served as the document expressing MSMS goals, purposes and reasons for being. In addition, it contained a few general statements re structure which are defined and clarified in the Bylaws. Then, in 1910, MSMS incorporated and, in so doing, filed with the State its statement of purpose in its incorporation papers. Thus the need for a Constitution disappeared, although no real problem occurred until 1968.

Over the years, the Bylaws have been continually refined and clarified, but the Constitution remains, unheeded and unneeded, since the organization's purposes are now outlined in the incorporation papers.

Legal Counsel therefore suggested to the Delegates in February that the House might well consider the abolition of the Constitution and transfer of any desired statements into the operating Bylaws. The Speaker concurred that the Constitution and Bylaws Committee should consider the suggestion.

The Committee has discussed the matter and generally favored the idea of reviewing the need for and value of the Constitution. It was specifically pointed out that such a study did not include a rewriting of the Bylaws. Clarifying amendments might be found necessary, but no more so than during any annual review.

The Committee was particularly sensitive to potential misunderstanding of the high purpose and limited scope of the proposed study. It feared that misunderstanding would produce suspicion of motives and thus doom the project before it began. Therefore, the Committee chairman agreed to have introduced a resolution in behalf of the Committee alerting the House to the Committee proposal and seeking House concurrence.

The Committee therefore specifically recommends that such a study be conducted, that progress on the study be reported periodically and a proposed revision be presented to the House, possibly in 1969, with final action possible by 1970 or 1971.

Correspondence re Elections. The Judicial Commission corresponded with the Committee suggesting that it consider revision of the method of electing Councilors. The Committee discussed the matter and alternatives to the election by the House. No action was taken.

Suggested Study of Methods of Membership Transfer. Since problems do occur when a member transfers from one component medical society to another, The Council has suggested that this matter might be studied with an eye to clarifying Bylaws language. The Committee has this on its agenda.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended approval of this report with the following amendments:

"The proposed amendment to Chapter, 19, Section 1 of the Bylaws be amended by deletion of the words 'by unanimous consent,' and the insertion of the words 'by consent of 75 percent of.' "

"In regard to the proposed review of the Constitution... your Reference Committee would recommend a continuing review of the Constitution but not with a view of its abolition."

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON MEDICAL STAFF SURVEY OF HOSPITALS

Rosser L. Mainwaring, MD, *Chairman*

No business came up before this Committee. The Committee did not meet.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended the report be accepted.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON PROCEDURES OF THE HOUSE OF DELEGATES

Noyes L. Avery, MD, *Chairman*

This Committee has functioned each year since 1963 for the purpose of reviewing the operations of the House of Delegates and formulating recommendations to the Speaker designed to improve the efficiency of that body wherever possible.

The foremost guideline of the Committee has always been its priority placed upon the provision of adequate time for the conducting of the major business of the House itself, so that Delegates may have ample opportunity to fully consider and debate matters brought before them. The Committee is unanimously persuaded that experience has shown that the volume of business has become such that *more time is needed* for the deliberation and reporting of reference committees.

The Committee notes that since 1965 the deadline for submitting resolutions has been fixed at the third session (Monday night) except by unanimous consent of the Delegates. It is felt that an intensified effort should be made to encourage all to submit their resolutions before the House convenes, so that they may be printed and studied by Delegates in advance. For the 1968 meeting, however, the Committee recommends that no resolutions be accepted after the *second* session (Monday morning) except by consent of two-thirds of the seated Delegates. While still permitting the introduction of resolutions which may be deemed necessary while the House is in session, it is felt that this change in the order of business will advantage all Delegates by providing more deliberative time. This will be more easily accomplished when it becomes possible to start the sessions one week later than has been the case in the past, allowing more time for county societies to meet in the early Fall (see recommendations of this Committee in 1967).

It has been stated above that the Committee feels that the House has reached the point where it needs more overall time in which to function. This time may be added by holding the first session commencing at noon on Sunday rather than Sunday evening; it may be added by meeting on Wednesday morning (when the scientific meetings have commenced). Although the Committee is not now recommending any major time addition or rescheduling of the order of business of the House, it suggests that in future years commencement at noon on Sunday may be preferable to commencing on Sunday evening or extending the meeting to Wednesday noon. Under such circumstances resolutions would be submitted before the close of the second session (Sunday evening) with provision for exceptions.

The Committee also noted that, although the President of MSMS is elected by the House of Delegates, it has been many years since the House itself has had the honor of conducting his formal inauguration. Feeling that the Delegates would be enthusiastic about doing so, and convinced that a ceremony befitting the investiture of the MSMS President can best be performed before his peers at a specially designated meeting of the House, the Committee is recommending that this ceremony take place during a new function, a dinner meeting on Tuesday evening. The State Society Night program formerly held on Wednesday evening, during which the President has been inaugurated for the past several years, will be revamped accordingly.

It is recommended that the dinner meeting of the House on Tuesday evening be designated the fifth session, preceded by a preprandial commencing at 5:30 pm, and be held at 6:00 pm, ending at 8:00 pm with the sixth session of the House. It is further recommended that attendance at the dinner be determined by the Speaker at his discretion, and that certain other appropriate business of the House also be transacted at this time, including the designation of Michigan's Outstanding Physician, awarding of MSMS Certificates of Commendation, and other awards of similar stature. The Committee further recommends that all honored guests attending the House meeting be invited to, and introduced at, this dinner meeting.

Finally, the Committee notes that the Michigan Medical Service corporate meeting will be conducted during Tuesday morning and end with a luncheon during the 1968 meeting, rather than continue into Tuesday afternoon. The Committee approves this change, feeling that it will expedite the business of the House itself, providing better scheduling for reference committee meetings, and hopes that the MMS meeting itself can be expedited particularly by devising a speedier method of certifying electors.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, accepted the report and recommended further implementation of its suggestions be made as soon as possible.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE ON PROFESSIONAL LIABILITY INSURANCE

JOHN G. SLEVIN, MD, *Chairman*

Because of the marked increase in malpractice claims in recent years, the House of Delegates established the Committee on Professional Liability Insurance in 1966. The present Committee investigated what is being done in other states to lessen the frequency of such suits.

Probably the most widely discussed program is the *Joint Attorney-Physician Review Panel* which was initiated more than ten years ago in Pima County, Arizona. This is a joint panel of lawyers and physicians set up by the local Bar Association and the County Medical Society. It is a pre-trial hearing with the plaintiff and the defendant physician and their attorneys presenting the evidence. The panel finds either that there is or is not substantial evidence of malpractice. If the answer is "yes" and if an equitable claim adjustment cannot be reached out of court, the medical society agrees to produce expert medical witness at the trial.

Our Committee found that a negative verdict by the Joint Attorney-Physician panel did not preclude the plaintiff going to court. Among the hazards to the defendant physician was the exposure of all the records of the case to the plaintiff's lawyer, making the defense against the malpractice claim more difficult. Our Committee noted that in 1967 premiums for professional liability in Arizona rose fifty percent, the highest increase in the country.

A number of other states have tried the Pima County Panel system only to abandon it because it did not achieve its purpose, namely, a reduction in the number of malpractice claims and increased the cost of professional liability insurance.

The New Jersey Plan was considered. It is set up under a rule of the New Jersey Supreme Court and consists of a joint panel of lawyers and physicians with a retired judge presiding. All records of the hearing are confidential and cannot be turned over to another lawyer or the courts. If the panel decides against the claimant, his attorney must withdraw from the case. However, the plaintiff can obtain another lawyer and take the case to court. A report from the New Jersey State Medical Society on the operation of the plan was favorable. However, there was not enough data at present to evaluate the effectiveness of the New Jersey Plan.

The Oregon State Plan was also studied in depth. The state medical society has sponsored malpractice insurance through private underwriters since 1933. This was on a single premium policy until 1967 when the increase in claims and the amount of settlements and court awards forced a change to a differential premium based on the field of practice. Premiums varied from $190.00 to a high of $693.00. The high rate was for anesthesiologists, neurosurgeons, obstetricians, gynecologists, orthopedic surgeons, plastic surgeons, and otolaryngologists who perform plastic surgery. This corresponds with the new category established by the National Bureau of Casualty Underwriters which determines premium rates on professional liability insurance for its affiliated companies. The NBCU blamed the premium increase on the rising cost of malpractice claims especially in these specialties.

The NBCU indicated that its affiliated companies sustained ever increasing losses which amounted to $140.00 for each $100.00 in premiums; that losses and expenses for surgeons totaled $151.00 for each $100.00 in premiums.

According to reports published in the AMA News, the insurance rates for physicians' and surgeons' professional liability insurance has been raised during the past year in 38 of the 50 states as follows: Arizona, 50%; Washington, 48%; California, 32%; Colorado, Delaware, Hawaii, North Carolina, Puerto Rico, Utah, 30%; Florida, 26.3%; Minnesota, Texas, 25%; New York, 21%; Maryland, Michigan, Montana, New Mexico, Oregon, Pennsylvania, Rhode Island, Virginia, 20%; Alabama, 16%; Arkansas, Missouri, Wisconsin, 15%; Connecticut, Georgia, Idaho, Iowa, Kansas, Kentucky, Ohio, Oklahoma, South Carolina, Tennessee, West Virginia, Wyoming, 10%; New Hampshire —10%.

Ontario and most Canadian provinces, it was noted, have a much lower incidence of malpractice claims. Inquiry was made why this is so. It seems that under Canadian law, when a plaintiff files a malpractice suit, he is required to post a bond covering court costs and attorneys' fees. If he loses his suit, the bond is forfeited. Our legal advisors explained that in Canada the legal profession is not allowed to work on a contingent fee basis whereas this is the customary procedure in American jurisprudence. The Committee was informed that the contingent fee system seeks to give the poor man his day in court and is approved by the majority of American lawyers. Legal advice was that the chances of adopting the Ontario plan in Michigan was nil.

Action being taken by the California Medical Association to lead to a better "professional liability atmosphere" in that state was considered. The CMA sponsored six professional liability bills in the state legislature. Several of these bills were considered as worthy of introduction in the next session of the Michigan Legislature and will be noted under Recommendations.

Educational Programs for Physicians. A survey of the programs of the various states which have had committees to study the malpractice problem reveals that education of the physician is needed so that he may avoid the common problems leading to malpractice claims. Members of this Committee from Wayne County reported that as a result of meeting with lawyers who defend eighty percent of the malpractice claims in the Detroit Metropolitan area, the need to educate the physician in medico-legal matters was, in their opinion, paramount. They indicated that more malpractice claims originate because of loose talk or criticism by physicians about the actions of other physicians, than from any other cause.

RECOMMENDATIONS:

1. That county medical societies, and in large areas, hospital medical staffs, be urged to hold at least one meeting annually devoted to medico-legal problems conducted by an attorney knowledgeable in the field, with emphasis on procedures to lessen the causes for malpractice suits.
2. That the MSMS Legislative Committee formulate a bill to be introduced at the next session of the Michigan Legislature to exempt from subpoena or compulsory disclosure of its actions or proceedings committees of hospitals, state or local medical societies all information and reports furnishing such committees for statistical, scientific, educational or medical study or research directed toward the reduction of morbidity or mortality, utilization, audit of medical care, etc.
3. That physicians, particularly those in the high risk category, be urged to consider carrying excess professional liability, over and above their regular professional liability coverage, the so-called "umbrella policy," which provides at least $1,000,000 over present coverage. It was noted that a number of malpractice awards during the past year have far exceeded the usual $100,000 coverage normally carried by most high risk insurees. They have varied from $200,000 to as high, in one instance, as $1,400,000. Since the cost of such supplemental coverage can be substantially reduced by group insurance through medical societies, as has been demonstrated by some of the larger county medical societies, it is further recommended:
    a. That the MSMS Committee on Professional Insurance Plans investigate the possibility of establishment of such a group supplemental personal catastrophe policy for members of MSMS.
    b. That the MSMS Committee on Professional Insurance Plans continue to investigate feasible plans for reduction of malpractice rates. This study should include the feasibility of MSMS sponsoring a "doctor-owned" professional liability carrier such as was done in 1957 by the Colorado Medical Society and is now being considered by the California Medical Society. It is also recommended that this MSMS Committee make a definitive report to the 1969 MSMS House of Delegates on these items.
4. Because there are many other matters which need study, such as, what can be done to protect the physician from harrassment by nuisance claims; could malpractice claims submitted to arbitration be binding on both parties thus precluding court action, etc., it is recommended that this Committee be continued and become a permanent committee of the House of Delegates.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, accepted the report, recommending: no action on Recommendation One, since this House has already acted on Res. 17; no action on Recommendation Two, since this House has already acted on Res. 46; and approval of Recommendations Three and Four.

THE HOUSE adopted the report of the Reference Committee.

AD HOC COMMITTEE TO RE-EVALUATE THE DUTIES OF THE PRESIDENT

C. ALLEN PAYNE, MD, *Chairman*

The 1967 House of Delegates adopted a reference committee recommendation that "an ad hoc committee of the House . . . be appointed to re-evaluate the executive duties of the President."

The Committee met on two occasions. It reviewed the present function of the President as outlined in the Bylaws as follows: As the general executive officer of the Society, the President shall preside at General Meetings of the Society, deliver the President's Address, appoint necessary committees where not otherwise provided for and, in addition, shall have a voice in deliberations of the House; shall be an ex-officio member of The Council with vote; and perform such other duties as imposed by the Bylaws.

The Committee recognized that the presidency is the highest honor which the Society can bestow upon a member.

In its study the Committee reviewed several other state medical society organizational structures. Wisconsin, Illinois, and Pennsylvania have presidential responsibilities similar to Michigan. (See Addendum.)

The Committee also reviewed the MSMS tradition and practice of sharing duties and responsibilities among the Speaker of the House of Delegates, the President and The Council Chairman, according to Bylaws direction.

Several proposals for modifying the president's duties were reviewed, and no consensus was established. However, the Committee wished to present to the House a possible solution which it felt deserved more detailed study. The idea, in general, is to provide for the President-elect to serve as Vice-Chairman of The Council, and the Immediate Past President to serve as Chairman of The Council.

Additional study of this and other suggestions is required before any specific recommendations can be made, for undoubtedly a thorough restructuring of the Bylaws would be required before such an amendment could be adopted.

ADDENDUM:

Excerpt from Bylaws of the State Medical Society of Wisconsin:

"The president shall preside at all meetings of the Society; he shall appoint a Committee on Arrangements for the annual session and all committees not otherwise provided for; he shall deliver an annual address at such time as may be arranged, and shall perform such other duties as custom and parliamentary usage may require. He shall be the real head of the profession of the state, during his term of office, and, as far as practicable, shall visit, by appointment, the various sections of the state and assist the councilors in building up the county societies, and in making their work more practical and useful."

Excerpt from Bylaws of the Illinois State Medical Society:

"The President. The president of the Illinois State Medical Society shall lead the Society in all its functions. He shall deliver an annual address at such time as may be arranged, and perform such other duties as custom and parliamentary usage may require.

"The president shall appoint the ad hoc committees of the House of Delegates. He may seek the advice of the officers and trustees.

"He shall preside at the general scientific meetings of the Society or designate one of the vice presidents to substitute for him."

Excerpt from Bylaws of Pennsylvania Medical Society:

"President. The President shall preside at all general meetings of this Society. At the first meeting of the Annual Session of the House of Delegates he shall deliver an address on such matters as he may deem of importance to this Society, and file a written report on his term as President. He shall be an ex-officio member of all committees, administrative councils and commissions, without the right to vote, and he shall perform the other duties required of his office by the Constitution of the Society and these Bylaws."

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended no action, because additional study of this and other suggestions is required before any specific recommendations can be made, for undoubtedly a thorough restructuring of the Bylaws would be required before such an amendment could be made.

THE HOUSE adopted the report of the Reference Committee.

COMMITTEE TO SELECT MICHIGAN'S OUTSTANDING PHYSICIAN

D. Bonta Hiscoe, MD, *Chairman*

The House of Delegates in 1964 took action "to establish annual recognition of Michigan's Outstanding Physician." The resolution outlined this award "as an annual recognition of a member of the profession, who is not necessarily a family physician nor one advanced in years." The delegates also adopted the report of the reference committee which instructed "that the Speaker annually appoint an ad hoc committee to make the selection from nominations submitted by component medical societies."

In 1965 our first outstanding physician was Franklin L. Troost, MD, of Holt. In 1966 William A. Hyland, MD, of Grand Rapids received the award posthumously. Last year Henry Cook, MD, of Flint was our Outstanding Physician of the Year.

The present Committee sent invitations to each component medical society, seeking nominations. The Committee carefully evaluated the many accomplishments and contributions of a number of very worthy nominees.

During our deliberations we drew up a set of guidelines. Briefly, they follow:

1 — Big city vs. outstate politics had no bearing on this matter.

2 — MSMS represents all doctors, academic, public health, administrative, as well as practicing physicians, and all fields should be considered equally.

3 — This physician should be outstanding in his own particular field.

4 — This physician should demonstrate a real sense of social responsibility.

5 — This physician should show a sense of loyalty to the medical profession and the Michigan State Medical Society.

6 — This award gives us an opportunity to use the high-power focus on an example of the type of physician MSMS is most proud of.

Your Committee's nominee for this year was born in New York City and attended Hunter College in New York; was graduated from Wayne State University Medical School in 1943; served an internship and a residency in Internal Medicine at Receiving Hospital, and has practiced in Detroit ever since.

Active in medical society work, our nominee is a delegate from the Wayne County Medical Society and an MSMS alternate delegate to the AMA House of Delegates. This doctor is active on several MSMS committees and also in the Wayne County Society, serving several years as an associate editor of the *Detroit Medical News.*

This physician is an excellent teacher and serves as a clinical assistant professor of medicine in Wayne State University Medical School.

Our nominee has a long, impressive record of volunteer service to the people of metropolitan Detroit and Michigan. This physician now serves as a vice-president of the Michigan United Fund, a Board member of Boy's Republic, a Board member of the Michigan Heart Association, a Board member of the Rehabilitation Institute, Treasurer of the Detroit Adventure cultural organization, a member of the Detroit Committee on Alcoholism, a long-time worker for the Detroit YWCA, the Detroit Neighborhood Service Organization, the Michigan Society for Mental Health, and other civic, health and educational groups.

Recently this physician was honored as one of the "Top Ten Detroit Women Who Work."

Her husband serves the Cathedral Church of St. Paul in Detroit as canon. She is the first and only woman member of the Standing Committee for Advice and Counsel to the Bishop of the Diocese of Michigan of the Episcopal Church.

The House of Delegates Committee to Select Michigan's Outstanding Physician of the Year enthusiastically urges the 1968 MSMS House of Delegates to approve our nomination of Doctor Marjorie Peebles Meyers because she is a distinguished physician, medical educator, medical statesman, and a dedicated community leader.

THE HOUSE, acting as a committee of the whole, adopted the report of the Committee.

COMMITTEE TO STUDY FINANCIAL STRUCTURE OF MSMS

James D. Fryfogle, MD

The Committee reviewed its 1967 report and reaffirmed the Committee's responsibilities stated therein:

> "It must 1) review all aspects of the financial structure of MSMS, 2) determine that monies are efficiently administered, and 3) assure itself that funds are adequate for the job to be done. The Committee decided not to comment on the worth and value of projects or activities since these are annually reviewed by the House through reports from The Council and committees."

The study plan for 1968 was much the same as in 1967, except that since this Committee reports every year, rather than at the former three-year interval, the Committee believed it need not report its detailed 1967 study of the operational mechanics of the MSMS budgeting and control system.

The Committee did review thoroughly the current MSMS Financial Report for the nine months ending August 31, 1968, reviewed projected operating budgets for 1969 and 1970, and devoted a major portion of its study time to the status and operation of the MSMS Asset Management Plan.

The Committee was satisfied that the monthly financial reports provide the Finance Committee and The Council with adequate information to maintain expense control and make informed financial policy decisions. It also was noted that the financial control system would produce a balanced budget again in fiscal 1968.

In addition, the Committee studied preliminary figures developed by staff, projecting operating budgets for 1969 and 1970. Briefly, the figures showed a normal increase in income, but a greater increase in projected expense. The Chairman produced examples of 1968 cost increases which have an effect on the budget:

	1967	1968	% increase
First class postage	5¢	6¢	20%
White punched mimeo paper	$1.44/ream	$1.58/ream	10%
Colored punched mimeo paper	$1.52/ream	$1.65/ream	9%
Stencils	$3.20/quire	$3.45/quire	8%
Groundskeeping	$3.25/hour	$4.00/hour	23%
Window-cleaning	$58/month	$63.80/month	10%

The bulk of the Committee's study was devoted to the new Asset Management Plan which was approved by the House in Special Session in February, 1968.

Doctor John Ylvisaker met with the Committee and went into detail regarding the implementation of the program since approval in February.

Briefly, the funds obtained by mortgaging the building will be apportioned to three MSMS funds, maintained as separate entities, with purposes and goals as follows:

Operating Fund.

a. To maintain adequate funds for day-to-day operating expenses of the Society on a pay-as-you-go basis.

b. To invest surplus, during peak income periods, in short-term fixed-dollar securities to provide maximum interest return and to provide for the programmed release of these investments to meet operating needs during low-income months.

Capital Reserve Fund.

a. To augment present Capital Reserve to $250,000.

b. To provide for maintenance of Reserve at a minimum level equal to:

1. Two-months operating expenses.
2. Additional sum equal to accumulated depreciation plus 10% of building contents.
3. Additional sum equal to 10% of replacement value of headquarters building.

c. Investment of funds:

1. 50% in fixed-dollar negotiable securities providing maximum interest income.
2. 50% in high-grade negotiable securities providing income and growth.

d. Replenishment and augmentation of fund principal by income and growth of the fund or by appropriation from operating funds when necessary.

Creative Reserve-Capital Protection Fund.

a. Created from balance of mortgage monies after providing for needs of Operating Fund and Capital Reserve Fund.

b. Investment of funds:

100% in bona fide investment vehicles to provide balanced portfolio of stocks, bonds, real estate or others resulting in growth, income and stability.

c. Maintenance and augmentation of fund by growth of asset value or by reinvestment of profit, gain or unused interest or dividend income.

d. Distribution of income:

1. To provide other than ordinary service to Society members.
2. For creative Society projects consonant with Society aims and objectives.
3. For research appropriate to 1 and 2.
4. For expenses incurred in management of the fund.

The investments are superintended by a Council-elected Board of Managers composed of physicians and financial experts. It reports to the Finance Committee and The Council.

The Committee agreed with the fund goals and plans and was satisfied with the exercise of authority and control over the funds by the Board of Managers and The Council, and praised the Treasurer for his experienced guidance of the entire plan.

CONCLUSIONS:

1. The MSMS Asset Management Plan is efficiently operated and represents a substantial improvement in the MSMS approach to present and future fiscal responsibility. The Committee approves of the manner in which the plan is being operated and in the goals the funds are set up to achieve. Particularly the Committee is impressed by the safeguards built into the fund management by Treasurer Ylvisaker and his Committee.
2. After a review of the 1967 year-end Financial Report and the 1968 nine-months report, the Committee believes the financial structure of MSMS is adequate to provide the funds to do the job required. In the long term, however, the Committee sees income rising more slowly than expense and a dues increase seems certain by 1970 or 1971.

THE REFERENCE COMMITTEE on Ways and Means, S. N. Kelso, MD, Chairman, recommended approval of the report, seconding the Committee's commendation of the performance of our Treasurer, Dr. John Ylvisaker.

The HOUSE adopted the report of the Reference Committee.

RESOLUTIONS

THE HOUSE adopted a motion that no new resolutions be introducd after the Monday morning meeting except by consent of two-thirds of the seated delegates.

RESOLUTION 1

Objection to Unnecessary Paperwork
Introduced by Donato F. Sarapo, MD

Whereas, the ever mounting volume of documentation required in the modern practice of medicine greatly diminishes the time available for patient care, and

Whereas, the medical profession already is becoming desperately short of time and physicians to care for the nation's sick people, and

Whereas, the number of certifications, signatures, and diagnoses on every laboratory and X-ray request covered by Michigan Hospital Service, Medicare, and various other insurance carriers adds a great deal of unnecessary documentation in an apparent attempt to make certain requested examinations are necessary, and

Whereas, if any questionably necessary procedures were to be ordered by the attending physician, they almost certainly would be properly documented, therefore be it

RESOLVED: That this House of Delegates of the Michigan State Medical Society instruct The Council of MSMS to advise all insurance companies and carriers operating in the State of Michigan that the members of MSMS consider this requirement of signatures, certifications, and diagnoses on each and every laboratory and X-ray procedure to be detrimental to the best interests of adequate patient care in this State, and be it further

RESOLVED: That this House of Delegates instruct The Council of MSMS to advise these same insurance companies of the desire of MSMS members to have this requirement withdrawn in the best interests of patient care, and be it further

RESOLVED: That this House of Delegates instruct The Council of MSMS to advise the individual members of MSMS that the best interests of patient care will be served by the members no longer providing these unnecessary and time consuming signatures, diagnoses, and certifications effective in the immediate future, and be it further

RESOLVED: That a similar resolution be presented to the House of Delegates of the American Medical Association by the Delegates from MSMS at the earliest opportunity.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman considered Resolution 1 and 61 together, and recommended adoption of the following substitute resolution:

Whereas, there is an ever-increasing burden of unnecessary documentation of medical services by the physician, hospital and fiscal intermediary in Medicare and Medicaid patients, and

Whereas, this detracts from the optimal care of the patient, and

Whereas, this unnecessarily increases the cost of patient care, therefore be it

RESOLVED: That the Legal Affairs Committee of the Michigan State Medical Society exert every effort to bring about the elimination of these unnecessary procedures.

THE HOUSE approved the following substitute Resolved and adopted the substitute resolution as amended:

RESOLVED: That this resolution be presented to the MSMS Council and the AMA House of Delegates at the earliest opportunity.

RESOLUTION 2

Legislation re Malpractice Suits

Introduced by Edward E. Elder, Jr., MD

Whereas, the cost of malpractice insurance has risen so markedly, and

Whereas, the judgments awarded in malpractice suits have reached astronomical figures, and

Whereas, many suits against physicians are nuisance suits designed to obtain money on out of court settlements, therefore be it

RESOLVED: That the Michigan State Medical Society urge the State Legislature of Michigan to enact legislation requiring the posting of a bond by a claimant in a malpractice action, as a step to reducing baseless lawsuits against physicians. For example, a $500 bond filed by the claimant might be awarded the defendant for defense costs, if the verdict is for the defendant physician.

THE REFERENCE COMMITTEE on State & Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended adoption of the resolution and referring it to The Council for appropriate implementation.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 3

Regional Councils of the State Comprehensive Health Planning Commission

Introduced by Robert J. Toteff, MD

Whereas, Public Law 89-749 authorizes regional councils of the State Comprehensive Health Planning Commission, and

Whereas, this Commission will be directing the utilization of federal funds in the local areas, and

Whereas, this Commission will be directing the expansion and building of health care facilities, and

Whereas, the county medical societies through their members will be acutely concerned with working with the directions and decisions of the Commission, and

Whereas, the appropriate information concerning this is not yet available to the county societies, therefore be it

RESOLVED: That the county societies be made cognizant of the role to be played by them in the regional councils of the State Comprehensive Health Planning Commission, and be it further

RESOLVED: That this information with recommendations be made available to the county societies at the earliest date possible following the 1968 House of Delegates Meeting of the Michigan State Medical Society, and be it further

RESOLVED: That the Michigan State Medical Society strongly recommend that the local county societies be involved and take a prominent part in the formation of the regional councils of the State Comprehensive Health Planning Commission, with the aim of having adequate medically oriented representation.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, amended the first Whereas, inserting after the words "Public Law 89-749," the words "as amended by Public Law 90-174," and amended the Resolved section by deleting the third Resolved and amending the first and second Resolved portions to read:

RESOLVED: That the county societies be made cognizant of the role which can be played by them in taking leadership in the regional councils of the State Comprehensive Health Planning Commission, and be it further

RESOLVED: That this information with recommendations by The Council be made available to the county societies at the earliest date possible following the 1968 House of Delegates meeting.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 4

Constitution and Bylaws Committee Report

Introduced by Henry A. Scovill, MD

Whereas, the Constitution and Bylaws Committee report contains an important recommendation relative to clarifying language in the Constitution and Bylaws and the Articles of Incorporation, and

Whereas, the Constitution and Bylaws Committee seeks approval for a proposed review of these three documents, therefore be it

RESOLVED: That this House of Delegates take due note of this recommendation and give favorable consideration to the Committee's report.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended disapproval, stating it felt it unnecessary to petition the House to consider any committee report.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 5

Michigan Medical Service Assignments

Introduced by H. T. Knobloch, MD

Whereas, Michigan Variable Fee Policy is completely new and different from previous policies, and

Whereas, a physician will not know the amount which will be paid for his services, and

Whereas, the fees paid under Medicaid by Michigan Medical Service are not a physician's usual and customary fee, and

Whereas, the changes in the policy remove M.V.F. from under the consent decree prohibiting assignment of fees to the physician, therefore be it

RESOLVED: That MMS shall honor assignments of fees to physicians under MVF policies, and be it further

RESOLVED: That if MMS refuses to accept assignments, MMS shall take the proper legal action forthwith to show that MVF is not bound by the consent decree.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended disapproval of the resolution because the assumption in the last Whereas is in error according to Legal Counsel.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 6

Family Planning

Introduced by Robert R. Dew, MD

Whereas, population growth during the first 600,000 years of man's existence was 0.02% per 1,000 years, and only 0.06% per year by the year 6,000 B.C., but the rate of increase in the last three centuries alone has been phenomenal — 0.3% in the period 1650 A.D. to 1750 A.D., 0.9% in the first half of the twentieth century, 2% now and expected to be 2.1% by 1975, and

Whereas, it has been calculated that 100 persons, multiplying at 1% per year for the 5,000 years of human history, would have produced a contemporary population of 2.7 billion persons per square foot of planet land surface (had all lived to maturity and procreated offspring); and

Whereas, war, famine, disease, etc. have in centuries past been checks on population expansion, public health and hygiene and medical advances have been primarily responsible for the relatively recent population explosion, and

Whereas, although public health and medical scientific advances have contributed mightily to longer and better life, they have coincidentally contributed to problems of the greatest magnitude, an example of which is illustrated by the statistical fact that although the economically deprived say that they wish to have fewer children than the economically privileged, they actually have about 40 children per 1,000 population as compared to about 22 children per 1,000 for the well-to-do, and

Whereas, over 250,000 babies are born in the U.S. each year to unmarried women, about 9 out of 10 label their children "unwanted", and

Whereas, although the numbers of unplanned pregnancies in marriage can only be estimated, nonetheless it is a fact that unplanned pregnancies too often produce unwanted and thus rejected, abandoned or battered children, therefore be it

RESOLVED: That the Michigan State Medical Society House of Delegates go on record as being in favor of universal family planning as an essential element of responsible parenthood, stable family life and social harmony and further that we recommend that each member actively participate to the best of his ability and opportunity.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended adoption of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 7

Need for Cooperation between MSMS and MHA

Introduced by D. Bonta Hiscoe, MD

Whereas, Michigan State Medical Society and Michigan Hospital Association are both very important parts of the medical community as it exists today, and

Whereas, both organizations have a vested interest in the future of medical practice, and

Whereas, both organizations are dedicated to fostering as little government involvement in medicine as possible, and

Whereas, combined efforts are often more effective in problem-solving and more influential in the public forum, therefore be it

RESOLVED: That closer cooperation be actively promoted between MSMS and MHA at both the state and local society levels, and be it further

RESOLVED: That when there are differences between the two societies about medical care or its administration, we make vigorous efforts to resolve these problems between ourselves, to preclude the arbitration of medical debates by the legislature.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, added a third Resolved which read, "RESOLVED: That a liaison committee be established between MSMS and MHA to implement this resolution", and recommended adoption of the resolution as amended.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 8

Investigation of a Doctor Convicted of a Felony

Introduced by Arnold L. Brown, MD

Whereas, it is vitally important to the health of the citizens of the State of Michigan that the medical profession see that all possible safeguards for their health care be provided, and

Whereas, is is generally agreed that the Michigan State Medical Society is the medical organization with whom such responsibility should rest, and

Whereas, it is agreed that the Michigan State Medical Society has the further responsibility of protecting the interests of medical doctors practicing in Michigan, and

Whereas, the Oakland County Medical Society, on behalf of all physicians in the State of Michigan, feels that in situations in which a medical doctor has been convicted of a felony, even though he may not have been a bona fide member of the Michigan State Medical Society, it should be within the province of the MSMS Judicial Commission to investigate the facts of such a case and to make appropriate recommendations to the Michigan State Board of Registration in Medicine, therefore be it

RESOLVED: That the Michigan State Medical Society empower and instruct the MSMS Judicial Commission to investigate instances such as described above and to make such recommendations as may be necessary to the Michigan State Board of Registration in Medicine for the purpose of safeguarding both the citizens and the practicing doctors of Michigan.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended disapproval of this resolution for the following reasons: 1) MSMS does not have basic authority or jurisdiction to investigate or make recommendations concerning a civil action against a member or nonmember of MSMS. 2) There are adequate mechanisms available for any citizen to make complaints or recommendations to the State Board of Registration in Medicine concerning physicians accused of a felony. 3) Committee recommends that MSMS inform the public via appropriate news media that this Society has no authority to grant or revoke medical licensure.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 9

Criminal Penalties for Violation of Administrative Rules

Introduced by D. Bonta Hiscoe, MD

Whereas, a revised Michigan Criminal Code will be submitted to the Michigan State Legislature for its consideration during the regular 1969 session of the Legislature, and

Whereas, the final draft of proposed new section 4235 of this new Michigan Criminal Code reads: "A person commits the crime of engaging in a business improperly if, after having once obtained a license, certificate, or permit required for the business, profession, or occupation in which he is engaged or practices, or while engaging in a business, profession, or occupation for which no license, certificate, or permit is required, he intentionally violates any statute or lawfully adopted rule or regulation governing or regulating that business, profession, or occupation. Engaging in a business improperly is a Class C misdemeanor", and

Whereas, this proposed language embodies a major substantive change in that it would classify as a crime, and impose criminal penalties for, the violation of a bureaucratic rule, since criminal penalties have historically only been levied for violation of laws adopted by the elected representatives of the people, and

Whereas, this proposed new major change would establish precedent, and although a "Class C misdemeanor" carries with it upon conviction a maximum fine of $250 and/or a maximum sentence of imprisonment for 30 days, once the violation of a rule adopted by a State agency is established to be a criminal offense the "class" of misdemeanor could be altered, and

Whereas, the traditional penalties for intentional violation of either a statute or a rule regulating a profession have been determined by the appropriate licensing and regulating board, and adequately police the profession and protect the public through power to suspend or revoke licenses, but this proposed new Criminal Code section would make it a criminal offense not only to violate any rule adopted by the licensing authority, but to violate a rule promulgated by any State agency administering programs involving the profession, therefore be it

RESOLVED: That this House of Delegates opposes the making a crime of violation of a rule or regulation adopted by an agency of State government, and be it further

RESOLVED: That this House of Delegates specifically opposes the inclusion of proposed Section 4235 of the revised Michigan Criminal Code, and be it further

RESOLVED: That copies of this resolution be forwarded to all appropriate parties and the Michigan State Medical Society take all further necessary steps to implement the intent of these resolveds.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended approval of this resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 10

Pilot Study to Improve Hospital Efficiency

Introduced by Edward J. Tallant, MD

Whereas, the present shortage of physicians is likely to continue into the foreseeable future, and

Whereas, this shortage is of great concern not only to the medical profession, but also to the general public and the Federal government, and

Whereas, despite vigorous efforts to expand the facilities to train more medical students, it is projected that the serious shortage will continue because of our expanding population, and

Whereas, an alternative answer to the problem is to utilize more efficiently the time of practicing physicians, and

Whereas, a major part of modern medical practice is centered in the hospital, where, as everyone knows, there is a great need for streamlining procedures which could make medical care, and the physicians' labors much more efficient, therefore be it

RESOLVED: That The Council of MSMS be instructed to seek a grant for the purpose of conducting a meaningful pilot study on ways and means to make it possible to conserve the time and energy of the medical staff in the care and treatment of patients; to devise new and imaginative methods to reduce the number of personnel required to service patient hospital care; and to investigate and project into the future the use of various automation devices in hospitals that would improve the efficiency, reduce the cost and save on labor in the hospital care of patients.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, deleted the word "automation" from the Resolved and recommended approval of the resolution as amended.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 11

Seating of Delegates at Special Sessions

Introduced by C. Jackson France, MD

Whereas, questions arose as to who were eligible to be seated at the Special Session of the House of Delegates of the Michigan State Medical Society, held in February 1968, and

Whereas, the Bylaws do not specify whether an alternate delegate seated at the Annual Session of the House of Delegates serves for that session only or whether he assumes the office of delegate until the end of the year, therefore be it

RESOLVED: That the Bylaws Committee of the Michigan State Medical Society submit an amendment to clarify this problem.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended approval of the resolution and presented, on first reading, appropriate Bylaws changes to amend Chap. 9, Sec. 4, adding the words "and remains a Delegate until the next Annual Session" to the end of the first Sec. 4 sentence.

THE HOUSE, at its next meeting, adopted the report of the Reference Committee.

RESOLUTION 12

Membership Requirements

Introduced by Homer M. Smathers, MD

Whereas, Chapter 2, Section 1 of the Michigan State Medical Society Bylaws requires, "To be eligible for active membership in any component county society, a doctor of medicine must hold an unrevoked license to practice medicine, surgery, and mid-wifery in Michigan," and

Whereas, the word "mid-wifery" is archaic and demeaning to the practice of medicine today, therefore be it

RESOLVED: That the word "mid-wifery" be deleted from Chapter 2, Section 1 of the Bylaws.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended approval of the resolution and presented, on first reading, appropriate Bylaws changes, amending Chapter 2, Section 1, by deleting from the second sentence the words "to practice medicine, surgery and mid-wifery."

THE HOUSE, at its next meeting, adopted the report of the Reference Committee.

RESOLUTION 13

Exemption of Dues for Hardship Cases

Introduced by Paul R. Dumke, MD

Whereas, each year there are members who are unable to pay their dues because of illness or financial reasons, and

Whereas, many of these physicians are ineligible for Associate Membership and remission of dues, and

Whereas, temporary assistance will enable such physicians to maintain their membership, and

Whereas, the Board of Trustees of the American Medical Association may excuse members from payment of dues provided they are excused from payment of local dues by their component and state associations, therefore be it

RESOLVED: That Chapter 5 of the Michigan State Medical Society Bylaws be amended by addition of the following section:

"Section 8. Hardship Cases: A member for whom the payment of dues would be a financial hardship by reason of physical disability or illness may be excused from payment of dues by The Council, provided the member is fully or partially exempted from the payment of local dues. A member may also be excused from payment of dues because of financial hardship for other reasons, but these must be set forth by the secretary of the member's component society."

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended approval of the resolution and presented, on first reading, appropriate

Bylaws changes, adding to Chapter 5, a new Section 8 as follows: "Sec. 8. HARDSHIP CASES — A member for whom the payment of dues would be a financial hardship by reason of physical disability or illness may be excused, fully or partially, from payment of dues by The Council provided the member is fully or partially exempted from the payment of component society dues. A member may also be excused from payment of dues because of financial hardship, or for other reasons, but these must be set forth by the secretary of the member's component society."

THE HOUSE, at its next meeting, adopted the report of the Reference Committee.

RESOLUTION 14

Separate Sections on Neurology and Psychiatry

Introduced by Benjamin Jeffries, MD

Whereas, there is an increased number of neurologists in Michigan, and

Whereas, the neurologists are desirous of having their own section meetings, therefore be it

RESOLVED: That the Bylaws of the Michigan State Medical Society be amended to establish separate Sections for Neurology and Psychiatry.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended approval of the resolution and presented on first reading, appropriate Bylaw changes.

THE HOUSE, at its next meeting, adopted the report of the Reference Committee.

RESOLUTION 15

Uniform National Licensure Examination

Introduced by Luther R. Leader, MD

Whereas, it is archaic that physicians licensed to practice medicine in one state find because of technicalities in the laws of another state they cannot obtain reciprocity and must take the examination of the other state to qualify to practice, and

Whereas, the Federation of the State Medical Boards has attempted to devise a uniform national licensing examination which would be acceptable in all states of the Union, and

Whereas, such a uniform national licensing examination is most desirable and should be adopted without delay, and

Whereas, the Michigan State Board of Registration in Medicine accepts the National Board examination as adequate qualification for licensure, and

Whereas, the Michigan State Board of Medical Examiners in the Basic Sciences does not recognize the National Board examination, therefore be it

RESOLVED: That the House of Delegates, Michigan State Medical Society, go on record as favoring and strongly urging the adoption by all states of a uniform national licensing examination, and be it further

RESOLVED: That the Michigan State Board of Medical Examiners in the Basic Sciences accept the National Board examination, seeking whatever changes in the present Michigan law as may be necessary to achieve that end, and be it further

RESOLVED: That the Michigan Delegates to the American Medical Association be instructed to present at the next meeting of the House of Delegates of the American Medical Association a similar resolution in support of a uniform national licensing examination, and be it further

RESOLVED: That a copy of this resolution be sent to the Michigan State Board of Registration in Michigan, the Michigan State Board of Medical Examiners in the Basic Sciences, and the President of the Federation of State Medical Boards.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, deleted the fourth and fifth Whereas and the second Resolved, and recommended approval of the resolution as amended.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 16

Procedures for Resolving Grievances Against Non-members

Introduced by Laurel S. Eno, MD

Whereas, the county medical society can accept and investigate complaints only against physicians who are members, and

Whereas, there are no facilities available to patients who have grievances against physicians who are not members of the local medical society, and

Whereas, patients of non-member physicians should be protected against unethical practices, and

Whereas, the services, fees and conduct of physicians who are not members should be subject to the same standard of behavior as are members of the Michigan State Medical Society, and

Whereas, under present circumstances Michigan State Medical Society members are subject to criticism for behavior of non-members and have no provision for entering into the review of the activities of such non-members, therefore be it

RESOLVED: That The Council of the Michigan State Medical Society appoint a committee to investigate the problem of grievances against non-member physicians and to recommend methods by which it may be solved.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, changed the Resolved portion to read:

"RESOLVED: That the Legal Affairs Committee be instructed to investigate the problems of grievances against any physician licensed to practice medicine in the State of Michigan and to recommend methods by which they may be resolved."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 17

Educational Program on Professional Legal Responsibility

Introduced by Raymond J. Barrett, MD

Whereas, members of the legal profession who defend the majority of malpractice claims against physicians are unanimous in their opinion that an intensive educational program is necessary to inform physicians and ancillary medical personnel of the legal pitfalls which often lead to suits of malpractice, therefore be it

RESOLVED: That the House of Delegates, Michigan State Medical Society, urges all component county medical societies, as well as the medical staffs of all the larger hospitals in Michigan, to devote at least one meeting annually to a discussion of the legal problems of medical care by an attorney competent in the field of malpractice, and be it further

RESOLVED: That the medical staff of every hospital in Michigan be urged to inform all ancillary medical personnel who are concerned with patient care, not to discuss with, or in the presence of, the patient any matters concerned with the patient's diagnosis, treatment or care or the qualifications of any physician on the medical staff.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended approval of the resolution amended to read as follows:

Whereas, members of the legal profession who defend the majority of claims against physicians are unanimous in their opinion that an intensive educational program is necessary to inform physicians and ancillary medical person-

nel of the legal pitfalls involved in patient care which lead to lawsuits; therefore, be it

RESOLVED: That the House of Delegates of MSMS urge all component medical societies as well as the medical staffs of the hospitals in Michigan to devote at least one meeting annually to a discussion by an attorney or other persons competent in the field of legal problems of medical care; and be it further

RESOLVED: That the administrative staff of every hospital in Michigan be urged to inform all ancillary medical personnel who are concerned with patient care not to discuss with, or in the presence of, the patient any matters concerned with the patient's diagnosis, treatment, or care or the qualifications of any physician or nurse on the staff."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 18

Medical Staff Tenure

Introduced by A. H. Hirschfeld, MD

Whereas, the present method of hospital staff appointments which are renewable on a yearly basis can be used by the hospital board of trustees and/or hospital administrators to discourage open and frank discussion and criticism of hospital administration by members of the medical staff, and

Whereas, such open and frank discussion by members of the medical staff is to the best interest of patient care, therefore be it

RESOLVED: That the MSMS House of Delegates favor indefinite tenure of appointment to the medical staff of all hospitals in Michigan after an appropriate probationary period of appointment with termination of appointment to the medical staff subject only to conviction of a felony, revocation of license by the State, conviction of unethical practice by a county medical society or the Michigan State Medical Society, or violation of the bylaws, rules or regulations of the hospital which has been approved by the medical staff, and be it further

RESOLVED: That this resolution be sent to the president of each board of trustees and the president or chief of staff of each medical hospital in Michigan.

THE REFERENCE COMMITTEE on Miscellaneous Business, M. Peebles Meyers, MD, Chairman, recommended approval of the resolution after amending the first Resolved to read:

"RESOLVED: That the MSMS House of Delegates favor annual reappointment to the active medical staff; that reappointment shall not be denied except for medical ineptitude, character deficiency, or conviction of unethical conduct."

THE HOUSE added an additional phrase to the first Resolved in the Reference Committee report and adopted the report as amended. The amended first Resolved read:

"RESOLVED: That the MSMS House of Delegates favor annual reappointment to the active medical staff; that reappointment shall not be denied except for medical ineptitude, character deficiency, or conviction of unethical conduct, revocation of license by the State, or violation of the Bylaws, rules or regulations of the hospital which have been approved by the medical staff."

RESOLUTION 19

Establishment of a Legal Section in Michigan Medicine

Introduced by Arthur B. Levant, MD

Whereas, many legal matters of concern to the members of Michigan State Medical Society escape their notice for lack of publicity, therefore be it

RESOLVED: That *Michigan Medicine* establish a medical-legal section to be published at least six times a year with timely articles prepared by attorneys who specialize in legal medicine.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended no official action on the resolution since the Publication Committee had indicated its commitment to this end in 1969.
THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 20

Binding Arbitration in Malpractice Suits

Introduced by John G. Slevin, MD

Whereas, the Professional Liability Committee of MSMS has studied the various arbitration panels, such as the Pima County Plan, whereby defendant physician and plaintiff submit their case to a joint committee of lawyers and physicians to determine the validity of the malpractice claim, and

Whereas, the Professional Liability Committee has found none of these plans is satisfactory because arbitration is not binding on either party, therefore be it

RESOLVED: That the House of Delegates, request the Joint Committee of the Michigan Bar and MSMS, which is now in the process of studying the problem of malpractice to include in its report, due in September 1969, a factual analysis and its recommendations concerning legality, practicability and advisability of establishment by law of a method whereby, if both parties to a malpractice suit voluntarily agree to abide by binding arbitration, it could minimize the number of such suits, lessen the burden of cost, render justice to both parties, hasten settlement, and leave to the courts only the question of the amount of damages if the arbitration board finds in behalf of the plaintiff.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, recommended approval of the Resolution with the following substitute Resolved:

"RESOLVED: That the House of Delegates request the MSMS Liaison Committee with the State Bar to include in its report, due in September, 1969, its recommendations concerning the legality and advisability of establishment by law of a method of binding arbitration in malpractice suits."

THE HOUSE amended the substitute Resolved by adding after the words "binding arbitration" the following: "voluntarily agreed to by both parties", and adopted the report of the Reference Committee as amended.

RESOLUTION 21

Water Pollution

Introduced by William Haeck, MD

Whereas, water pollution is an increasingly urgent national problem directly related to a progressively complex industrial and urban society, and

Whereas, the Great Lakes area is a particularly important problem as exemplified by the accomplished decline in Lake Erie and the progressive crisis in Lakes Michigan and Huron and even Lake Superior, and

Whereas, constructive forces in the field of conservation, in government and in industry are opposing the problem of pollution despite many handicaps and opposite pressures, and

Whereas, the medical profession, in its concern for ecology and the *total* environment of modern man, must sustain a resolute continued interest in water pollution as an important cause of bacterial, viral and toxic chemical disease, and

Whereas, pure and abundant water in this area of Great Lakes beauty is an aesthetic necessity for residents and visitors in this era of the longer vacation and the shorter work week, therefore be it

RESOLVED: That a standing committee of MSMS be created to be concerned with water pollution and that shall function with an authoritative and dynamic voice in support of organizations, public and private that are engaged in the war against pollution.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended approval of the resolution with the deletion of the words in the Resolved "be created to."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 22

Out-patient Physical Therapy Treatments

Introduced by Frederick S. Gillett, MD

Whereas, there has long been a shortage of adequate physical therapy facilities in most communities in the State of Michigan and likely this will continue for a long time to come, and

Whereas, many hospital physical therapy departments are unable to furnish adequate out-patient physical therapy treatments because of the heavy in-patient demands, and

Whereas, there are many Registered Physical Therapists in private practice who are well equipped to treat patients under the prescription of a Doctor of Medicine or Doctor of Osteopathy, and

Whereas, many insurance companies, including Michigan Blue Cross, now insist that all out-patient physical therapy treatments must be given in a hospital physical therapy department, therefore be it

RESOLVED: That The Council seek the enactment of legislation requiring insurance companies to provide in their policies, giving physical therapy benefits, that these treatments may be provided on an out-patient basis by any Registered Physical Therapist, under the direct specific orders of a Doctor of Medicine or a Doctor of Osteopathy.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended the approval of the Resolution with the substitution of the following Resolved:

"RESOLVED: That The Council request the Health Insurance Council to seek a solution to the problem of providing out-patient physiotherapy by a licensed physiotherapist under the direct specific orders of a Doctor of Medicine or Osteopathy."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 23

Referendum

Introduced by Harvey M. Andre, MD

Whereas, American democratic organization has always been designed to allow the will of the majority of individual members of any organization to determine that organization's policy, and

Whereas, traditionally the total membership of any organization has had the right of referendum concerning any action taken by its duly elected representatives, and

Whereas, the MSMS has traditionally been a democratic organization representing all of the member doctors of medicine in this State, therefore be it

RESOLVED: That Chapter Fifteen of the Bylaws be amended by the addition of Section Three to read:
"Disapproval of any action of the House of Delegates may be accomplished by a direct mail polling of the entire membership of the Michigan State Medical Society upon petition signed by no less than three hundred members in good standing. A majority vote of the entire voting membership disapproving of any action of the House of Delegates shall be final and binding."

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended disapproval of the resolution and that the question of referendum by petition including the use of mail ballots be studied by the Standing Committee on Constitution and Bylaws for recommendations to the next House of Delegates.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 24

Publication and Distribution of Minutes of The Council of MSMS

Introduced by Bruce D. Bauer, MD

Whereas, Delegates to MSMS should be well informed of actions of The Council prior to the annual session, and

Whereas, The Council considers matters of considerable import necessary for the proper function of MSMS, and

Whereas, is is the obligation of The Council to render a report to the House of Delegates on matters germane to the Society, and

Whereas, minutes of The Council must be approved, transcribed, then re-evaluated by the Executive Committee, therefore be it

RESOLVED: That the minutes of The Council, after each meeting, be made available to the Delegates prior to their approval by said Council, and be it further

RESOLVED: That these said minutes of The Council be in printed form, labeled confidential, and distributed to the House of Delegates members.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended disapproval of the resolution believing that the intent could be achieved better through closer communication between Councilors and component societies.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 25

Improvement of Ambulance Services

Introduced by Edward E. Elder, Jr., MD

Whereas, a primary contact between the medical care system and patients is the ambulance service, and

Whereas, the medical profession is in a position to help train ambulance personnel, and

Whereas, patients' lives may actually be saved by proper first aid at the scene of accidents or in the ambulances on the way to a hospital, therefore be it

RESOLVED: That this House of Delegates urge the Michigan State Medical Society and each component medical society to take an active interest in training ambulance personnel and in upgrading ambulance service.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 26

Four-Year Medical School at MSU

Introduced by Robert M. Stow, MD

Whereas, the Michigan State Medical Society has, for several consecutive years, through its House of Delegates and Council and in all other practicable ways, strongly urged the expansion of the two-year medical school at Michigan State University to a four-year school, and

Whereas, through the development of the clinical areas of the MSU medical school curriculum, the State of Michigan can most immediately, effectively and economically qualify Michigan State University's present program as a Class A medical school, thus with speed and efficiency increasing the supply of well trained physicians so greatly needed to meet the health needs of our rapidly growing population, and

Whereas, meeting the demand for properly trained physicians is everybody's business; this State Medical Society has long urged, and will continue to urge, that our state move with all possible speed to bring its medical education facilities at the University of Michigan, Wayne State University, and Michigan State University, to full function; lay groups should be established which would take it upon themselves to join MSMS in urging the necessary legislative financial support to bring about this result, therefore be it

RESOLVED: That this House of Delegates once more respectfully urge the Governor and State Legislature of Michigan to proceed with the expansion of the two-year College of Human Medicine to a complete college of medicine at MSU granting the degree of Doctor of Medicine, and be it further

RESOLVED: That The Council of MSMS take immediate steps to develop a group of lay leaders in the State of Michigan who can and will effectively join with us in urging the logical development of the MSU medical education program.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, considered together Resolutions 26 and 27 and in lieu thereof, submitted the following Substitute Resolution and recommended its approval.

SUBSTITUTE RESOLUTION

The Expansion to a 4-Year Medical School at Michigan State University and its Funding

Whereas, the Michigan State Medical Society has for several consecutive years, through its House of Delegates and Council and in all other practicable ways, strongly urged the expansion of the two-year medical school at Michigan State University to a four-year school, and

Whereas, through the development of the clinical areas of the MSU medical school curriculum the State of Michigan can most immediately, effectively and economically qualify Michigan State University's present program as a fully accredited medical school, thus with speed and efficiency increasing the supply of well-trained physicians so greatly needed to meet the health needs of our rapidly growing population, and

Whereas, meeting the demand for properly trained physicians is everybody's business; this State Medical Society has long urged, and will continue to urge, that our state move with all possible speed to bring its medical education facilities at the University of Michigan, Wayne State University and Michigan State University to full function; lay groups should be established which would take it upon themselves to join MSMS in urging the necessary legislative financial support to bring about this result; therefore be it

RESOLVED: That this House of Delegates once more respectfully urge the Governor and State Legislature of Michigan to proceed with the expansion of the two-year College of Human Medicine to a complete college of medicine at MSU granting the degree of Doctor of Medicine; and be it further

RESOLVED: That the Michigan Legislature be strongly urged to make the required appropriation.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 27

Appropriation of Funds for MSU Four-Year Medical School

Introduced by C. Allen Payne, MD

Whereas, MSU's two-year College of Human Medicine has been in operation for two years, and

Whereas, the MSU College of Human Medicine is proving its capacity to recruit faculty of excellence and dedicated to new and community-oriented educational efforts, and

Whereas, the Citizens Committee for Education for Health Care, of the State Board of Education, in 1966 studied Michigan's manpower needs and MSU's capability to became a complete four-year medical school, and

Whereas, the Citizens Committee's recommendation to the State Board of Education was that MSU be authorized to develop a complete four-year medical school, and

Whereas, the State Board of Education, in January, 1967, did act favorably on the Citizens Committee report, and recommended a four-year medical school at MSU, and

Whereas, current surveys of Michigan physicians and hospital administrators, carried out by the Michigan Health Council, indicate that the medical manpower crisis deepens steadily, and

Whereas, the Michigan Legislature has not yet authorized or funded expansion of the MSU College of Human Medicine to a complete four-year school, therefore be it

RESOLVED: That the attention of the Honorable George Romney, Governor of Michigan, be called to this situation, and that he be strongly urged to recommend the appropriation of funds required to begin expansion of Michigan State University's two-year College of Human Medicine to a full four-year medical school during the fiscal year 1969-1970, and be it further

RESOLVED: That the Michigan Legislature likewise be strongly urged to make the required appropriation.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, considered together Resolutions 26 and 27 and, in lieu thereof, submitted a substitute resolution (see Resolution 26).

RESOLUTION 28

Disability Compensation

Introduced by Noyes L. Avery, MD

Whereas, employee compensation for disability and injury are an increasing problem for the disabled, medical, employer and insurance groups, and

Whereas, real disability problems exist as a result of disease or injury arising out of special conditions of employment, but also disability occurs during, before, or after employment activity which is not or only remotely related to conditions of employment, and

Whereas, there is an increasing tendency for the courts to grant employer compensation for conditions not truly considered related to employment from purely medical, and scientific reasoning, and

Whereas, this type of court action has been influenced by the misfortune of the disabled, and the resulting sympathy and the lack of other means of support and recompense of such disabled persons, and

Whereas, these decisions have often rested on medically meaningless, prostituted or confusing medical testimony and often have been in conflict with factual and responsible medical testimony, and

Whereas, compensation insurance premiums have increased at an inordinate and unfair rate when actual causative factors are considered, and

Whereas, there has been decreasing reliance on credibility of responsible medical testimony by the courts in the matter of causations in cases of employment disability, and

Whereas, the disabled are none-the-less disabled whether or not the disability was caused by or resulted from or aggravated by conditions of employment, therefore be it

RESOLVED: That MSMS, jurists, lawyers, laborers, employers, and insurance carriers cooperate to create more reasonable concepts of disability compensation, and be it further

RESOLVED: That consideration be given to compensation for disability whether or not it be related to special conditions of employment, and be it further

RESOLVED: That MSMS take the initiative in forming a proper commission which will search for a proper solution to this problem and make recommendations toward these ends.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended disapproval of the resolution feeling this was primarily a matter of legal and socio-economic importance and not entirely within the province of the MSMS.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 29

Regional Advisory Committees to Blue Shield

Introduced by W. Kaye Locklin, MD

Whereas, in the past Michigan Blue Shield has had the benefit of the services of five county medical advisory committees to assist in the interpretation of difficult claims and in the adjudication of fees, and

Whereas, these county committees have served only a portion of the state, and

Whereas, there are some component societies without such committees, and

Whereas, there is need for a uniform appeal mechanism throughout the state for the physician in fee disputes with Blue Shield, and

Whereas, there will be a need for local physician involvement in review of utilization of professional medical services and charge patterns, and

Whereas, establishment of committees on a regional basis would make for increased efficiency, therefore be it

RESOLVED: That the MSMS recommend the formation of regional eommittees representative of the medical profession and selected by the component medical societies within each designated region to assist and advise Michigan Blue Shield in the review of claims, the arbitration of fee disputes, and review of utilization frequency and charge patterns.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, amended the Resolved by deleting "designated regions" and inserting "Councilor Districts or combination thereof" and recommended approval of the resolution as amended.

THE HOUSE further amended the Resolved, adding "that the physician representatives on the regional committees will report back to their component medical societies." and adopted the report of the Reference Committee as amended.

RESOLUTION 30

State and County Society Membership for Residents

Introduced by Edward E. Elder, Jr., MD

Whereas, recently the AMA suggested that means be found by which interns and residents could take a more active role in the local and state medical societies, and

Whereas, the Bylaws of the MSMS state that any licensed physician is eligible for active membership in the MSMS and the local societies, and

Whereas, residents are licensed physicians, and

Whereas, many of the decisions made by the local societies and the MSMS will directly affect the interns and the residents when they enter private practice, and

Whereas, the local societies and the MSMS are forums for the expression of new ideas and these new physicians would be another source of ideas and opinions, and

Whereas, many interns and residents may be interested in participating more actively in their local and state societies but are unable to because they cannot afford the dues necessary for active membership, therefore be it

RESOLVED: That the MSMS and the local societies institute a program whereby residents who are in residency programs within the State of Michigan and who hold a permanent Michigan license may become active members with all the rights and privileges thereof of the local society and the MSMS, and be it further

RESOLVED: That dues be at the discretion of the local society but that they be not more than 10 per cent of the dues charged a practicing physician member.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, recommended no action on this resolution since the MSMS Bylaws already provide for full membership for any licensed physician and the resident may become an associate member with no dues if he so wishes.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 31

Protection by Law of Committees of Medical Societies

Introduced by Francis P. Rhoades, MD

Whereas, Public Act. No. 270 of 1967 protects physicians and hospitals from liability for release of medical information to any in-hospital staff committee, used in the course of study for the purpose of reducing morbidity or mortality or to advance medical research and education; and

Whereas, the county medical societies, the State Medical Society and medical specialty societies also have committees to whom medical information is released for the purpose of reducing morbidity or mortality or to promote medical education and research; therefore be it

RESOLVED: That the House of Delegates urges an amendment to Public Act 270 of 1967 to extend the benefits and protection of this law to similar committees of county medical societies, the MSMS and the medical specialty societies.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 32

Compensation for Regional Anesthesia

Introduced by S. N. Kelso, Jr., MD

Whereas, many general practioners and obstetricians have of necessity been administering saddle block or other regional anesthesia in patients for delivery, and

Whereas, malpractice insurance for anyone performing these procedures has recently taken a dramatic rise, and

Whereas, there are many hospitals in the state where anesthesiologists are not available to administer regional anesthesia, i.e. (saddle block or caudal), therefore be it

RESOLVED: That when regional anesthesia is administered by the attending obstetrician, it be a a compensable benefit in all Blue Shield programs.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended approval of the following Substitute Resolution:

"Whereas, many attending physicians have of necessity been administering regional anesthesia; therefore be it

"RESOLVED: That Michigan Medical Service be requested to study the feasibility of making regional anesthesia administered by the attending physician a compensable benefit in all Blue Shield programs."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 33

Minor's Consent to Venereal Disease Therapy

Introduced by Eli J. Igna, MD

Whereas, many minors do not seek treatment for venereal disease because they know their parents must be notified to gain consent for treatment; and

Whereas, the highest incidence of venereal disease is in the "under 21" age group; and

Whereas, late treatment results in less cures and more dissemination of venereal disease; therefore be it

RESOLVED: That The Council direct its Legislative Committee to urge the State Legislature to pass a law allowing minors to give their own consent for examination for and treatment of venereal disease.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 34

Use of Computer Techniques by the Board of Registration in Medicine

Introduced by Alexander Blain, III, MD

Whereas, some 600 doctors of medicine are examined each year for a license to practice in Michigan, and

Whereas, the preparation of the examinations requires about 300 hours work by each member of the Board, and

Whereas, the number of eligible applicants will increase by about 25% with the expansion of the Wayne State University School of Medicine and the operation of the Michigan State University School of Human Medicine as a four year school, and

Whereas, there is an increasing demand for the examination of individuals and small groups at various times between regular examinations given in January and June, and

Whereas, this increasing work load requires the use of improved and advanced techniques to render acceptable service, therefore be it

RESOLVED: That the MSMS does hereby recommend that the Board of Registration in Medicine explore all possibilities and adopt such modern and advanced techniques as, in its opinion, may best serve to expedite its lawful function of examination, licensure and regulation of the practice of medicine in Michigan, and be it further

RESOLVED: That an adequate fee, commensurate with the cost, be charged for such service.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 35

Deletion of the American Medical Association Reinstatement Fee

Introduced by Brock E. Brush, MD

Whereas, Chapter III, Section 1 (E), of the Bylaws of the American Medical Association states: "Members of the American Medical Association who have been dropped from the membership roll for non-payment of annual dues cannot be reinstated until such indebtedness has been discharged, and such indebtedness shall apply only to the one year of delinquency;" and

Whereas, the payment of this reinstatement fee of one year's dues plus current dues to the American Medical Association (a total of $150 in 1968) may be a financial hardship to the physician and deterrent to the reinstatement of his membership; and

Whereas, the physicians may be members of their local medical society and MSMS without membership in AMA, and

Whereas, members of component medical societies should be encouraged to be members of the American Medical Association; therefore be it

RESOLVED: That the Michigan Delegates to the AMA be instructed to introduce at the 1968 Interim Meeting an appropriate resolution to delete the membership reinstatement fees as specified in Chapter III, Section 1 (E) of its Bylaws.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 36

Physicians' Hospital Privilege Act

Introduced by Leon Rottenberg, MD

Whereas, The MSMS House of Delegates has passed 1966 Resolution 55 – Hospital Staff Privileges for All Ethical Licensed Physicians; and

Whereas, the AMA House of Delegates unanimously passed 1966 Resolution 34 that "all doctors of medicine regardless of their field of practice be accorded hospital privileges commensurate with their training, experience, and demonstrated competence; and that in the public and professional interest every ethical licensed doctor of medicine who needs and desires them have staff privileges in at least one accredited, full facility community hospital,"; and

Whereas, the MSMS House of Delegates in 1967 instructed the Legal Affairs Committee to study the feasibility of developing a Physician's Hospital Privilege Act; therefore be it

RESOLVED: That this House of Delegates recommend that an ad hoc committee of the House be appointed to study the Physicians' Hospital Privilege Act and report back to the 1969 House.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, recommended no action on the resolution since this subject is under active consideration by the Legal Affairs Committee.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 37

Establishment of Committees to Evaluate Hospital Provided Care

Introduced by Loyal W. Jodar, MD

Whereas, claims are constantly being made as to the advanced level of medical care now available; and

Whereas, hospitals and their boards have appointed numerous committees to check on the quality of professional care rendered by medical staff members; and

Whereas, at present complaints and suggestions of individual physicians regarding inadequacies of hospital provided care receive insufficient attention; and

Whereas, the Joint Commission on Accreditation of Hospitals requires establishment of various committees to evaluate professional patient care; therefore be it

RESOLVED: That MSMS recommend to the Joint Commission on Accreditation of Hospitals that they require formation of Hospital Care Committees in all approved hospitals, composed of physician members of the staff, to review all aspects of hospital provided patient care.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, suggested the following changes in the third Whereas, to read: "Whereas, at the present time complaints and suggestions of physicians regarding a hospital's failure to provide care of an acceptable professional standard receives insufficient attention from Administration", and delete the fourth Whereas and revise the Resolved to read:

"That the House of Delegates authorize The Council to appoint a committee to investigate such complaints when

petitioned by a majority of the active staff of an accredited hospital and to make appropriate recommendations."

The Reference Committee then recommended the approval of the resolution as amended.

THE HOUSE did not adopt the report of the Reference Committee, but instead adopted the Resolution in its original form.

RESOLUTION 38

Practice Opportunities in Michigan

Introduced by Fred E. Caumartin, MD

Whereas, the MSMS House of Delegates has repeatedly urged the State Legislature to support the financial requests of the three medical schools in this State; and

Whereas, the people of Michigan are experiencing a serious shortage of private medical practitioners; and

Whereas, the hospitals of Michigan with educational programs are having increasing difficulties in obtaining physicians to fill their many house officer positions; therefore be it

RESOLVED: That the House of Delegates urge the deans of the three medical schools in Michigan to acquaint and urge the medical students in their various schools to consider seriously the advantages and the opportunities of the hospitals in this state and further to consider entering practice in the State of Michigan.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, changed the Resolved by inserting the words "and faculties" after the word "deans" and recommended approval of the resolution as amended.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 39

Blue Shield Advertising

Introduced by Thomas M. Flake, MD

Whereas, some of the Blue Shield advertising for its new Variable Fee Program has been confusing to both physicians and patients; and

Whereas, such confusion may result in errors, problems and criticism; and

Whereas, it is in the best interest of Michigan Medical Service, the doctors and the subscribers that these contracts be clearly understood by all; therefore be it

RESOLVED: That the House of Delegates urge the Board of Directors of Michigan Medical Service to review all advertising and public announcements prior to their release.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended adoption of the resolution after amending the Resolved portion to read: "That the House of Delegates urge the Board of Directors of Michigan Medical Service to carefully review advertising policy."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 40

Rescinding of Abortion Laws

Introduced by Henry A. Scovill, MD

Whereas, the current abortion laws of the State of Michigan are very restrictive so that only a very few women may receive legal abortions; and

Whereas, all data indicate that despite these laws many women do receive criminal abortions and in the process many times seriously endanger their physical and mental health, and

Whereas, most studies indicate that the average woman who receives an abortion is married and in all other ways a law-abiding citizen, and

Whereas, all of the current abortion law reform bills are limited in their scope so that only a very few women would have the right to obtain an abortion, and

Whereas, the right to bear a child should be primarily determined by the pregnant woman and her husband, and

Whereas, the abolishment of the abortion laws would not force anybody who had moral or religious misgivings into either having or performing an abortion, therefore be it

RESOLVED: That MSMS urge the Michigan Legislature to rescind the abortion laws wherein they apply to pregnancies of less than thirteen weeks gestation.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended adoption of the resolution with the following amendments: Elimination of the third Whereas, and changing the Resolved portion to read, "RESOLVED: That the Michigan State Medical Society urge the Michigan Legislature to so alter the abortion laws that the criminal code will not apply to abortions performed by a licensed medical or osteopathic physician in an accredited hospital licensed by the State."

THE HOUSE adopted the amended resolution, after further amending it by striking the word "pregnant" from the fifth Whereas, so that it reads: "Whereas, the right to bear a child should be primarily determined by the woman and her husband."

RESOLUTION 41

Study of Osteopathic Physician Training Programs

Introduced by Clifford W. Colwell, MD

Whereas, osteopathic physicians care for a significant percentage of the population of the state of Michigan, and

Whereas, pressures are building within and outside of the medical and osteopathic professions to make their integration and cooperation a logical reality, and

Whereas, if this integration is to be accomplished, there must first be found a sound and equal basis upon which to judge and compare the background, training and competence of each of the two professions, and

Whereas, reports available at this time indicate that the training and experience offered at osteopathic medical colleges do not meet the minimum requirements for accreditation ordinarily applied to medical schools in the United States, and

Whereas, there is now no known good, available data on the training and experience offered in osteopathic internships and residencies, and

Whereas, Michigan has more osteopathic physicians than any other state in the Union, therefore be it

RESOLVED: That MSMS sponsor a study to provide information and evaluation concerning the current training of osteopathic physicians in their various schools and in their internship and residency training programs, and be it further

RESOLVED: That a special committee be appointed to implement this type of study promptly.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, recommended that this resolution be referred to The Council for consideration.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 42

Registered Nurses

Introduced by Clifford W. Colwell, MD

Whereas, the ever-increasing population is placing more and more demand upon the medical and paramedical profession, and

Whereas, technological advances in the medical field require highly trained paramedical personnel, and

Whereas, refinements in patient care as well require highly trained and skilled paramedical personnel, therefore be it

RESOLVED: That MSMS encourage, foster and promote the training of registered nurses and the programs therefore, and be it further

RESOLVED: That MSMS ought to preserve and elevate the training of registered nurses and the programs therefore, and be it further

RESOLVED: That MSMS actively, through its staff, Council, and House of Delegates, discourage legislation that would in any way degrade the profession and dignity of a registered nurse or in any way equate the status of a registered nurse with persons of less training.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 43

Balanced Patient Concept for Nursing Homes

Introduced by Alfred Golden, MD

Whereas, all general hospitals are operated on the balanced patient load concept; the strictly intensive-care type of hospital is not economical or feasible; and

Whereas, modern nursing homes have been constructed and organized on the balanced load concept; and

Whereas, experience has shown that this principle results in the lowest possible per diem cost for the patient and the community; and

Whereas, the principle of separating the basic nursing home from the skilled nursing home will result in a downgrading of staff for the care of patients and also result in the undesirable frequent transfer of patients between facilities; therefore be it

RESOLVED: That the House of Delegates approve the principle of the balanced patient load concept for nursing homes; and be it further

RESOLVED: That the House of Delegates call this to the attention of the State Health Commissioner and the new committee appointed by the Governor to study nursing homes and their rates.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended adoption of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 44

Revision of Blue Shield Method of Payment to Physicians

Introduced by Sidney E. Chapin, MD

Whereas, the present profile method of determining fees only substitutes a range of fees for a set fee schedule; and

Whereas, in many areas in the country Blue Shield plans have found that complying with the individual physician's billing; without a fee schedule or arbitrary screening, has proved economical, equitable and predictable; and

Whereas, all county medical societies have an established procedure for arbitration of unfair fees; therefore be it

RESOLVED: That the House of Delegates recommend to Michigan Medical Service that it amend its present methods of payment to physicians, and adopt a method of payment based on the individual physician's billing, for group subscribers, individual subscribers and those supported by the Medicare-Medicaid program.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended disapproval of the resolution.

THE HOUSE did not adopt the Reference Committee report, but directed the Speaker to refer the resolution to a committee for further study.

RESOLUTION 45

Medical Aspects of Crime

Introduced by Ralph H. Pino, MD

Whereas, three years ago the Wayne County, Michigan State and the American Medical Association House of Delegates voted in favor of an educational program to inform the public on the causes and consequences of crime and delinquency from the medical standpoint; and

Whereas, little has been done to implement this resolution; and

Whereas, crime in the street presently is of political importance in this country; therefore be it

RESOLVED: That the MSMS House of Delegates reaffirm the resolution presented to the AMA House of Delegates in 1966 which states "that the American Medical Association is urged to continue and expand its efforts in crime prevention by initiating educational programs for physicians and the public and by appropriate studies on the medical aspects of crime prevention;" and be it further

RESOLVED: That a copy of this resolution be sent to the President of the American Medical Association.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended adoption of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 46

Immunity from Subpoena of Records of Medical Society Committees

Introduced by Charles E. Darling, MD

Whereas, Act No. 17 of the Public Acts of 1968 (Michigan Hospital Licensing Law) provides in Section 12 (2) that records of hospital committees, in review functions, are confidential and shall not be available for court subpoena; and

Whereas, the various committees of the state and county medical societies of Michigan have review functions similar to those of hospital committees; therefore be it

RESOLVED: That The Council instruct the Legal Affairs Committee to prepare legislation to grant review committees of Michigan State Medical Society, the component county medical societies and medical specialty societies immunity from subpoena of records by the Courts of the State of Michigan and to seek introduction of such legislation in the 1969 Session of the Michigan State Legislature.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended disapproval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 47

Qualifications for "Life Member", Michigan State Medical Society

Introduced by W. Kaye Locklin, MD

Whereas, requirement of today's medical education is more demanding timewise, and

Whereas, doctors of medicine are spending more years in academic training before beginning the practice of medicine, and

Whereas, there is a trend to retirement at an earlier age, and

Whereas, to qualify for "Life Member" in MSMS, a doctor must have attained the age of 70 years or have been in practice for 50 years, therefore be it

RESOLVED: That Chapter 2, Section 6, paragraph (a) of the Bylaws be studied by the Reference Committee on Constitution and Bylaws for modification more in keeping with the needs of the times.

THE REFERENCE COMMITTEE on Constitution and Bylaws, C. J. France, MD, Chairman, recommended disapproval of the resolution and referral of the general subject of life membership to the Constitution and Bylaws Committee for study.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 48

Para-Medical Education Program

Introduced by W. Kaye Locklin, MD

Whereas, the Subcommittee on Para-Medical Education of the Education Liaison Committee has been involved for the past three years in the development of a program for the education of physicians' assistants, with significant progress, therefore be it

RESOLVED: That this Committee be commended for its diligent efforts and urged to expedite the completion of this worthwhile educational project.

THE REFERENCE COMMITTEE on Public and Professional Relations, P. T. Lahti, MD, Chairman, recommended adoption of the resolution after amending the Resolved portion to read: "That this Committee be commended for its diligent efforts and urged to continue this worthwhile educational project."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 49

Division of Blue Cross/Blue Shield Premium

Introduced by Donald N. Sweeny, Jr., MD

Whereas, in 1959 (Resolution 30), the MSMS House of Delegates recommended that all premium notices of Blue Cross/Blue Shield be itemized so that the subscribers may know what percentage of their premiums are used to defray hospital costs and for remuneration to physicians; and

Whereas, Blue Cross/Blue Shield continues to bill jointly; and

Whereas, the increase in health costs emphasizes the need for this differentiation between hospital and physician charges; therefore be it

RESOLVED: That the House of Delegates recommend to the Board of Directors of Michigan Medical Service that it announce to its subscribers annually the percentage of the premium paid to Blue Cross and the percentage to Blue Shield.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended adoption of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 50

Commendation to Dr. Ralph Pino

Introduced by J. C. Danforth, Jr., MD

Whereas, Dr. Ralph Pino has served the Michigan State Medical Society as a delegate for 23 sessions during the last 35 years, and

Whereas, Dr. Pino is continuing to serve as a delegate to the Michigan State Medical Society; therefore be it

RESOLVED: That the House of Delegates highly commend Dr. Ralph Pino for his many contributions to the activities of the Michigan State Medical Society, to the medical profession, and to the public it serves.

THE HOUSE suspended the rules for the purpose of giving the resolution immediate consideration, and adopted the resolution by acclamation.

RESOLUTION 51

Adjudication of Medical Problems

Introduced by J. A. Witter, MD

Whereas, the county medical society has established mechanisms for the review and arbitration of any problem that cannot be settled directly by the physician and the patient, and

Whereas, the county medical society has the right to seek the cooperation of its members in mediating these problems and has the procedure for exacting discipline if indicated; and

Whereas, there is adequate protection of the rights of both the physician and the patient through the appeal procedures of the Michigan State Medical Society; therefore be it

RESOLVED: That the House of Delegates recommend to the Board of Directors of Blue Shield that matters relating to ethics, professional conduct, mediation and discipline of physicians be referred to the county medical society for adjudication.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended that the resolution be disapproved.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 52

Liaison with SAMA and MSMS

Introduced by Marjorie P. Meyers, MD

Whereas, the Student American Medical Association (SAMA) chapters at the University of Michigan, Wayne State University and Michigan State University meaningfully represent well over 90% of all medical students, interns and residents at their respective schools, and

Whereas, SAMA is now devoted to Concern, Commitment and Action in many fields of crucial importance to American Medicine today as is the Michigan State Medical Society, and

Whereas, SAMA would greatly benefit from the advice and counsel derived from close association and liaison with MSMS, therefore be it

RESOLVED: That MSMS officially establish liaison with the SAMA chapters at the University of Michigan, Wayne State University and Michigan State University by providing an official delegate to each of these chapters' advisory boards, and be it further

RESOLVED: That MSMS continue its financial support of these SAMA chapters and their increasing scope of activities and concerns by increasing the annual MSMS contribution to these SAMA chapters from $300 to $500.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended adoption of the resolution after amending the first Resolved to read: "That MSMS officially establish liaison with the SAMA Chapters in all accredited schools."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 53

Liaison with Medical Students, Interns and Residents

Introduced by Stuart Gould, Jr., MD

Whereas, there exists a definite lack of communications between the medical societies at the local, state and national levels, and the medical students, interns and residents concerning the purpose, operation and activities of the medical societies, and

Whereas, there exists no convenient way for medical students, interns and residents to obtain this information from the medical societies, and

Whereas, the establishment of better communications between the medical societies and the medical students, interns and residents will help to eliminate the lack of understanding between these groups, therefore be it

RESOLVED: That an official pamphlet be developed, published and distributed to all medical students, interns and residents concerning the purpose, operation and activities of the medical societies, and be it further

RESOLVED: That MSMS institute a program whereby medical students and interns may assume an affiliate membership with the local medical society in Michigan without all the rights and privileges of the local society, and be it further

RESOLVED: That a similar resolution be presented to the AMA House of Delegates by the delegates from MSMS at the earliest opportunity.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, approved the resolution in principle with the deletion of the first Resolved.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 54

State Medical Examiner's Senate Bill

Introduced by Donald Finlayson, MD

Whereas, the State Medical Examiner's Bill (Senate Bill No. 479 of March 2, 1967), died in the State Legislature of Michigan this year, and

Whereas, the Senate Bill No. 479 wasn't adequate for implementation for proper services for people of the State of Michigan; and

Whereas, it has always been the responsibility and the custom of the medical profession to serve the people through its profession (as has well been demonstrated by the performance of practicing physicians in the past by their free services and time given to teaching hospitals, universities, and indigents), and

Whereas, the medical profession still recognizes its responsibility of service to the people, therefore be it

RESOLVED: That MSMS formulate, promote, and support a new Medical Examiner's Bill to replace the present Coroner's System for the entire State of Michigan, with equal protection under the law for all citizens of the State of Michigan irrespective of locality of residency, and be it further

RESOLVED: That such a bill consider pathologists as the obviously best qualified group of physicians to study, to be trained, and to take over the functions of the medical examiner, and be it further

RESOLVED: That pathologists who are employed and who are earning a proper living, and who would only serve as part-time medical examiners in the various counties of the State of Michigan be encouraged to offer their services to the State of Michigan without remuneration; that all such money procured from all such various counties (average annual Coroner's expense to various counties) be utilized to run the entire Medical Examiner's System to include an adequate increase in salaries for full-time medical examiners and toxicologists now in the state employment and now overworked and underpaid (as such a service would only be comparable to the time and free services rendered throughout the years to society by practicing physicians on the staff of teaching hospitals and universities), and be it further

RESOLVED: That MSMS work through proper channels for an adequate budget to run such a statewide Medical Examiner's System, thus made possible by the free services of pathologists, and be it further

RESOLVED: That state troopers of the Michigan State Police be used as assistants to the Medical Examiners; so that the state budget to run the Medical Examiner's System will be within reasonable reach through proper legislation. (It is to be recognized that it is the custom of state troopers to appear at the scene of such cases), and be it further

RESOLVED: That all efforts and skills of the MSMS be utilized to carry out these resolutions for the making of a new medical examiners bill for the protection of the people of the State of Michigan, with equal protection under the law for all citizens to seek and find the impartial truth, related to the certification of death affecting such cases involved with compensation, insurance, accidents, civil court suits, and criminal cases; all of which circumstances carry a tremendous impact upon our civil rights and protection and upon our entire massive national economy.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended that no action be taken on the resolution but that it be referred to The Council.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 55

Support for Michigan Variable Fee Program

Introduced by Robert M. Stow, MD

Whereas, the Michigan State Medical Society has, in previous years on three occasions, passed resolutions of commendation and/or endorsement of Michigan Blue Shield (i.e., Resolution 19 of 1944, Resolution IV-13 of 1945, and Resolution 56 of 1966); and

Whereas, MSMS approved the "Heidenreich-Bowman" Resolution in 1956 urging total participation of Michigan State Medical Society members in Michigan Blue Shield's plans, and

Whereas, there currently is no official indication of the State Society's support and endorsement of Michigan Blue Shield's Variable Fee Program, and

Whereas, the current Michigan Blue Shield Variable Fee (MVF) Program reflects essentially those known wishes of the Michigan State Medical Society and the medical profession in general concerning scope of benefits and payment mechanism (i.e., 1967 MSMS House of Delegates Resolutions Nos. 4, 5, 32, 36; and 1966 Resolution Nos. 16, 22, 26, 29, 35, 41 and 66); therefore be it

RESOLVED: That MSMS endorse the Michigan Variable Fee Program, both as to scope of benefits and payment mechanisms, and urge its membership to actively support the program in all aspects, and be it further

RESOLVED: That MSMS recommend that every physician member display to his patients and the community his own support and endorsement by formal participation in the MVF Program.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended adoption of the resolution with the following amendments:

Amend the first Resolved to read, "That MSMS endorse the Michigan Variable Fee Program, both as to scope of benefits and payment mechanisms, and urge its membership to actively support the program.

Delete the second Resolved.

THE HOUSE adopted the amended resolution after further amending the first Resolved to read: "That MSMS endorse the Michigan Variable Fee Program in principle."

RESOLUTION 56

Practice of Laboratory Medicine

Introduced by Frank B. Walker, MD

Whereas, the MSMS House of Delegates adopted Resolution 37 in 1965, stating that "the operation of a medical laboratory as defined represents the practice of medicine and that a medical laboratory should be supervised and directed by a licensed physician," and

Whereas, there is currently considerable lay, political, social, and corporate interest in medical laboratory activity, including the solicitation of specimens from physician's offices in Michigan, and

Whereas, such activty has been considered unethical by the AMA, the MSMS and various state and national specialty organizations, therefore be it

RESOLVED: that the 1968 House of Delegates reaffirm its 1965 action, and authorize The Council to take such steps as are necessary to implement its position, and be it further

RESOLVED: that a copy of this resolution be forwarded to the various state and national specialty societies, to the entire membership of the MSMS, and to the AMA.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended that the second Resolved be deleted, and that the resolution be adopted as amended.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 57

Nursing Education

Introduced by Jack Hoogerhyde, MD

Whereas, the acute shortage of trained nursing personnel throughout the country has posed a serious problem in patient care in our hospitals, and

Whereas, the high standards for accreditation of hospital nursing schools, as demanded by the American Nursing Association, has increased costs of maintaining a nursing school and strained hospital budgets to new heights, and is reflected in higher hospital costs, which must be passed on to the patient, and

Whereas, many nursing schools have been closed in recent years because hospitals can no longer afford the heavy costs of nursing education, thus compounding the paucity of trained nurses, and

Whereas, the American Nursing Association would close all diploma, hospital-based nursing schools, transferring nursing education to the college campus, and

Whereas, experience has shown that graduates of two-year community colleges are not competent to assume responsibility on hospital wards without further supervision and training, and

Whereas, graduates of four-year baccalaureate programs in nursing theory may also require further supervision and training in responsible bedside nursing, and

Whereas, the emphasis on collegiate nursing education with the "phasing out" of all hospital nursing schools, can only result in a greater shortage of nurses, and

Whereas, recent legislation (H.R. 15757, the Manpower Training Act of 1968) has been passed by Congress, this act providing a subsidy to financially distressed nursing schools in the amount of $15,000 per year and is obviously intended to alleviate the stress on hospital finances and provide more trained nurses, and

Whereas, this important legislation is a step in the right direction, therefore be it

RESOLVED: That the Michigan State Medical Society:

1. Give its heartiest approval to H.R. 15757, and urge the legislative body of the American Medical Association to follow up and urge that subsidies to hospital nursing schools be further increased;

2. Voice its opposition to any plan to "phase out" hospital nursing schools;

3. Encourage the American Nursing Association to support four-year bacalaureate nursing training for only those applicants who possess the aptitude and desire to engage in nursing education.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, considered Resolutions 57 and 59 together and recommended the following Substitute Resolution, entitled "Nursing Education":

"Whereas, the acute shortage of trained nursing personnel throughout the country has posed a serious problem in patient care in our hospitals, and

"Whereas, many nursing schools have been closed in recent years because hospitals can no longer afford the heavy costs of nursing education, thus compounding the paucity of trained nurses, and

"Whereas, at the present time there is no unified academic program for training nursing personnel, and

"Whereas, the licensed practical nurse, the two-year associate degree nurse trained in our community colleges, the three-year diploma nurse trained in our hospital nursing schools, and the four-year baccalaureate university degree nurse are all separate entities and do not complement each other academically, and

"Whereas, recent legislation (H.R. 15757, the Manpower Training Act of 1968) has been passed by Congress, this Act providing a subsidy to financially distressed nursing schools, and is obviously intended to alleviate the stress on hospital finances and provide more trained nurses; therefore be it

"RESOLVED: That the Michigan State Medical Society:
1. Approve the intent of H.R. 15757 and encourage the House of Delegates of the American Medical Association to urge increased subsidies to hospital nursing schools.
2. Voice its opposition to ANY plan to "phase out" hospital nursing schools; and be it further

"RESOLVED: That the State Board of Education be requested to bring together all organizations concerned with nursing training to establish a unified academic program for all levels of nursing training aforementioned, and to establish a "master plan" whereby credits earned at each level of training be recognized and applicable to the next higher level of training; and be it further

"RESOLVED: That the State Board of Education consider integration of hospital nursing schools and community and state colleges in such a program."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 58

Prohibition of Cigarette Advertising on Television

Introduced by Fred C. Brace, MD

Whereas, television commercials are being beamed into our homes in ever-increasing volume, and

Whereas, children of ten spend many hours viewing this advertising on the television, and

Whereas, in a child's formative years he is very impressionable, and not able to evaluate which advertising is in his best interests, and

Whereas, cigarette advertising constitutes a sizeable percentage of the commercials seen via the television, and

Whereas, our medical profession recognizes the grave dangers in cigarette smoking, as the increase in lung cancer, cardiorespiratory illnesses, etc., as outlined by the United States Public Health Services, gives firm testimony, therefore be it

RESOLVED: That MSMS take the initiative in condemning all cigarette advertising on television, and be it further

RESOLVED: That this resolution be brought to the attention of the United States Public Health Services, the Department of Health, Education and Welfare, and to the legislative body of the American Medical Association, thus creating an awareness of this problem, and hopefully may initiate further action.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended adoption of the resolution after amending the Resolved portion to read:

"RESOLVED: That MSMS condemn all cigarette advertising on television, and be it further

"RESOLVED: That this resolution be brought to the attention of the United States Public Health Services, the Department of Health, Education and Welfare, and to the legislative body of the American Medical Association, thus creating an awareness of this problem, which hopefully may initiate further action."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 59

Nursing Education

Introduced by Victor Notier, MD

Whereas, there is a serious shortage of nursing personnel, nationwide and particularly in the State of Michigan, and

Whereas, degree bearing nurses are in particular shortage to staff school faculties, and

Whereas, an increasing number of potential applicants to schools of nursing desire a degree granting program, and

Whereas, such programs are of necessity, possible only in cooperation with, and as a part of a duly constituted college authorized to grant a Bachelor's degree, and

Whereas, to plan such new schools involves several years in preparation, therefore be it

RESOLVED: That the State Board of Education be enjoined to authorize such planning, and to officially accredit such schools, as part of the total academic program of such state colleges or universities, that at present do not have such schools, and who are so located that such schools could be developed, and be it further

RESOLVED: That the Legislature be appraised of the critical need in this area and enjoined to take appropriate steps legislatively to facilitate the earliest possible development of such schools as part of state colleges and universities where possible, and be it further

RESOLVED: That early attention be given to the critical needs in the Saginaw-Midland-Bay City area, with the Saginaw Valley College potential, and the Grand Rapids Metropolitan area with the Grand Valley College potential.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, considered Resolutions 57 and 59 together.

For Reference Committee and House action, see Resolution 57.

RESOLUTION 60

MDPAC

Introduced by Roy J. Gerard, MD

Whereas, MDPAC has functioned as an independent, autonomous organization with the full support of MSMS and its membership, and

Whereas, the need for more and continued political activity with its concomitant financial expenses and expenditures persists and expands, and

Whereas, the AMA and AMPAC, and each state medical society and its PAC have similar relationships and problems, therefore be it

RESOLVED: That The Council of MSMS appoint an ad hoc committee to study the relationships between the various state political action committees and the State Medical Society, and the relationship of the AMA and its PAC-AMPAC, and be it further

RESOLVED: That such an ad hoc committee present its findings and recommendations to The Council and to MDPAC.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended adoption of the resolution, after amending the first Resolved to read: "That The Council of MSMS appoint an ad hoc committee to study the relationships between the various state medical political action committees and their respective state medical societies, and the relationship of the AMA and AMPAC, and be it further . . ."

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 61

Hospital Recertification Forms for Medicare and Medicaid

Introduced by R. J. Toteff, MD

Whereas, considerable time, effort, and money is now being expended by hospital, hospital personnel, and physicians to complete and correct hospital recertification forms for Medicare and Medicaid patients, and

Whereas, this is a "post hoc" type of procedure, since most of these patients have been discharged and accounts paid, and

Whereas, this bureaucratic excuse in boondoggling takes time and effort of medical, paramedical and secretarial personnel which would be more wisely spent in current needs on care, and

Whereas, this certification requires falsification of dates and other data which is immoral and dishonest, even if it is directed by government bureaucracy, and

Whereas, this "post hoc" certification is apparently a punitive bureaucratic exercise done under pressures toward the hospitals which has characteristics of blackmail, and

Whereas, the expense of this procedure causes an increase in cost of medical and hospital care, which is purely due to governmental bureaucracy, and for which the medical profession will be blamed, and

Whereas, by resistance and pressure, the initial certification form was discontinued, it indicates pressure can be successful, therefore be it

RESOLVED: That the House of Delegates of the MSMS recommend that all members of the Society be advised not to sign certification and recertification forms for hospitalization of Medicare and Medicaid patients after January 1, 1969 as already having been demonstrated as being unnecessary, and be it further

RESOLVED: That notification of this action be sent to the Michigan Hospital Service, Michigan Hospital Association, the Michigan State Social Service Board or Commission, The U.S. Social Security System, the AMA, and all other states societies, and be it further

RESOLVED: That this whole "post hoc" bureaucratic boondoggle be documented and sent to all our Michigan Senators and Representatives in the Congress of the United States.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, considered Resolutions 1 and 61 together. For Reference Committee and House action, see Resolution 1.

RESOLUTION 62

Auto Safety

Introduced by Kornelius Van Goor, MD

Whereas, the highway auto injury and death toll continues at an unreduced rate and is one of our major health hazards, and

Whereas, the 1968 Labor Day highway death toll was the greatest ever, and

Whereas, our federal government has misdirected attention to auto defects as an important cause of the highway slaughter, and

Whereas, our state government has made a start toward control of the drinking driver, and

Whereas, the medical profession is concerned with the treatment of the injured and the diseased, but also **more importantly** with the **prevention** of disease and injury, therefore be it

RESOLVED: That MSMS encourage the enactment of legislation which will:

1. More strictly enforce the existing laws relative to driving while drunk and impose more severe penalties for violation thereof.
2. Detect and prosecute the reckless or careless driver.
3. Provide for a more careful and appropriate interval examination of all drivers; and somehow accomplish legislation which will require physicians to report diseases or defects which might affect driving capability to our State Department with the direct result that reevaluation of the driver may be accomplished.

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, recommended adoption of the resolution with the following amendments: Delete the third Whereas, and amend No. 3 in the resolved portion to read, "Provide for a more careful and appropriate interval examination of all drivers."

The Reference Committee also reaffirmed 1967 House of Delegates Resolution 51 on this subject.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 63

Direct Billing of Medicaid Group II (Medically Indigent) Patients

Introduced by Thomas Andrews, MD

Whereas, to preserve the direct patient-doctor payment relationship as the government plans future inclusion of increasingly large groups of employed patients in the medically indigent group, and

Whereas, many physicians want to maintain a direct financial relationship with their patient because they believe that the patient who has some responsibility in the payment mechanism, also may better recognize his responsibility to follow professional advice, and therefore benefit from medical care, and

Whereas, the Federal Title XIX Law provides direct payment to Medicaid Group II Patients at the option of the states; and that the State of Michigan does not now permit direct payment, therefore be it

RESOLVED: That the House of Delegates advise the State Department of Social Services to provide direct payment to Medicaid Group II Patients (Medically Indigent).

THE REFERENCE COMMITTEE on State and Federal Legislation, J. D. Fryfogle, MD, Chairman, amended the Resolved portion by adding at the end the words, "through legislative action if needed", and recommended its adoption as amended.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 64

MDPAC

Introduced by Robert E. Rice, MD

Whereas, MDPAC is a voluntary, non-profit, unincorporated committee of individual physicians and others, and

Whereas, MDPAC has demonstrated its ability to encourage better candidates to seek and assist them to obtain office, and

Whereas, health legislation on a local, state and federal level continues to flood the deliberative halls and in an ever increasing tide, therefore be it

RESOLVED: That this House of Delegates commend the MDPAC Board of Directors for its efforts and many successes, and be it further

RESOLVED: That The Council be encouraged to actively support not only MDPAC but deserving local, state and national candidates as well.

THE REFERENCE COMMITTEE on Resolutions, R. C. Prophater, MD, Chairman, recommended adoption of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 65

"Where We Stand"

Introduced by Harry A. Towsley, MD

Whereas, the monograph "Where We Stand" has been issued to the Delegates and officers of this Society, for two consecutive years, for their perusal and study, and

Whereas, the material therein has been provocative and stimulating in initiating constructive dialogue, and

Whereas, such a summarization of "medical positions" is necessary to our present and future deliberations, therefore be it

RESOLVED: That we commend the author, Mr. Hugh Brenneman, for this labor, and be it further

RESOLVED: That the House of Delegates authorize a yearly revision and updating of this monograph.

THE REFERENCE COMMITTEE on Miscellaneous Business, Marjorie Peebles Meyers, MD, Chairman, recommended adoption of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 66

Commendation to Claude L. Weston, MD

Introduced by James B. Blodgett, MD

Whereas, this House of Delegates of the Michigan State Medical Society is now convened in its 103rd Annual Session, and

Whereas, members of the House of Delegates, in accepting the responsibility of representing their constituent fellow physicians therein, perform a vital service to their Society and all of its individual members, and

Whereas, by giving of themselves, their valuable time and energies, delegates participate in the shaping of the course of our State Medical Society to the ultimate benefit of the profession and the people of Michigan it serves, and

Whereas, for nearly a full fourth of the 103 Annual Sessions of MSMS, without interruption, one delegate has faithfully and effectively represented his county medical society, making thereby a highly unusual and outstanding contribution to both his colleagues and the Society as a whole; therefore be it

RESOLVED: That this House of Delegates here and now, in deep appreciation and admiration, by rising acclamation, adopt this resolution commending and thanking Claude L. Weston, MD, delegate from Shiawassee County Medical Society, for his 26 consecutive years of service to this House of Delegates, his county society, the profession of medicine and the people of Michigan.

THE HOUSE suspended the rules for the purpose of giving the resolution immediate consideration, and adopted the resolution by acclamation.

RESOLUTION 67

Confidentiality of Michigan Medical Service Records

Introduced by Donald N. Sweeny, Jr., MD

Whereas, in the administration of Medicare, Michigan Blue Shield develops data and material relating not only to Part B of Medicare but also to other aspects of Blue Shield activity, and

Whereas, physicians' profiles and the data upon which they are based are illustrative of such composite data, and

Whereas, such data is received by Blue Shield from Michigan physicians in a confidential capacity; therefore be it

RESOLVED: That Blue Shield be urged to resist to the extent of its ability any effort by the Secretary of HEW to assert ownership of such data, and be it further

RESOLVED: That a copy of this resolution be transmitted to the Board of Trustees, American Medical Association and to the presidents of each state or territorial association for reference to his AMA Delegation.

THE REFERENCE COMMITTEE on Health Insurance and Medical Services, R. E. Rice, MD, Chairman, recommended approval of the resolution.

THE HOUSE adopted the report of the Reference Committee.

RESOLUTION 68

University of Michigan Hospital Centennial — 1969

Introduced by Harold F. Falls, MD

Whereas, the year 1969 will commemorate the one hundredth year of operation of the University Hospital of the University of Michigan Medical School, and

Whereas, the University Hospital has gained national and international recognition for its many contributions to medical science, organized medicine, medical education and services to patients of the State of Michigan and the Nation, and

Whereas, the University Hospital of the University of Michigan was the first of state-owned university hospitals to serve the patients and the doctors of any state in this Nation, and

Whereas, the University Hospital was recently recognized as one of the ten leading hospitals in the Nation, therefore be it

RESOLVED: That this House of Delegates to the MSMS extend its congratulations to the Board of Regents of the University of Michigan, to the past and current staff and administrative officers of the University Hospital for its past attainments and services to the people of the State of Michigan, and be it further

RESOLVED: That this House of Delegates, and MSMS extend its best wishes for the continuation of its outstanding service to the people of Michigan, and be it further

RESOLVED: That a copy of this commendation be sent to the officials of the University of Michigan.

THE HOUSE suspended the rules for the purpose of giving the resolution immediate consideration, and adopted the resolution by acclamation.

RESOLUTION 69

Advantages of Medical Practice in Michigan

Introduced by R. C. Prophater, MD

Whereas, there is a shortage of physicians in private practice in Michigan, and

Whereas, many more of the graduates of Michigan medical schools undoubtedly would decide to engage in private practice in Michigan if adequately informed of the opportunities available in this state; therefore be it

RESOLVED: That the Michigan State Medical Society encourage the various community agencies, such as chambers of commerce, to inform the students of the three Michigan medical schools of the advantages of medical practice in their areas.

THE HOUSE suspended the rules for the purpose of giving the resolution immediate consideration and adopted the resolution.

SPECIAL MEMBERSHIPS

THE REFERENCE COMMITTEE on Special Memberships, Arthur B. Levant, MD, Chairman, recommended approval of the following special memberships as recommended by the component medical societies and certified by the Secretary of MSMS in accordance with the Bylaws:

Life Memberships

Bay-Arenac-Iosco County — W. G. Gamble, Jr., MD; Otto F. Jens, MD; Mana Kessler, MD; Sabina Kessler-Frux, MD.

Calhoun County — John Robbert, MD.

Genesee County — James K. Sutherland, MD.

Ingham County — A. Edith Hall Kent, MD; Herbert K. Kent, MD; Milton Shaw, MD; Howard S. Willson, MD.

Jackson County — Ennis H. Corley, MD.

Kalamazoo County — William D. Irwin, MD; Alton E. Pullon, MD.

Kent County — Cornetta G. Moen, MD; William F. Reus, MD; Harold E. Veldman, MD.

Luce County — T. W. Thompson, MD.

Marquette-Alger County — Arthur L. Amolsch, MD.

Monroe County — Leonard C. Blakey, MD.

Oakland County — Ernest W. Bauer, MD; Ethel T. Calhoun, MD; Carl W. Dahlgren, MD; Loren C. Sheffield, MD; Loren C. Spademan, MD.

Ottawa County — Dirk C. Bloemendaal, MD; W. C. Kools, MD; Ralph Ten Have, MD.

Saginaw County — Suel A. Sheldon, MD; V. K. Volk, MD; Stuart Yntema, MD.

St. Clair County — John C. S. Battley, MD; J. Gilmore Kirker, MD.

Washtenaw County — Arthur C. Curtis, MD; Reed M. Nesbit, MD; Henry K. Ransom, MD; James L. Wilson, MD.

Wayne County — Harry E. August, MD; Louis L. Barnett, MD; A. Robert Bauer, MD; J. Keaner Bell, MD; Robert H. Berman, MD; John H. Boyd, MD; Harry L. Buller, MD; Howard A. Burrows, MD; Volney N. Butler, MD; Henry G. Chall, MD; Esther H. Dale, MD; Robert Durham, MD; Robert J. Elvidge, MD; Harold B. Fenech, MD; Russell F. Fenton, MD; Henry C. Galantowicz, MD; Ely W. Harelik, MD; Thomas J. Jamieson, MD; Stanley J. Joyce, MD; Raymond H. Koebel, MD; Maurice J. Kritchman, MD; Francis X. Krynicki, MD; J. Hugh Lewis, MD; J. Donald Mabley, MD; Rupert C. L. Markoe, MD; Pedro O. Martinez, MD; James J. McClendon, MD; Clarke M. McColl, MD; Clarence D. Moll, MD; Eugene A. Osius, MD; Harry A. Pearse, MD; Abraham S. Rogoff, MD; Frank M. Townsend, MD; Albert E. Vossler, MD; George L. Waldbott, MD; Edward A. Wishropp, MD; Wilford C. Wood, MD.

Retired Memberships

Allegan County — Lewis F. Brown, MD.

Bay-Arenac-Iosco County — Leslie A. Lambert, MD; Michael Medvesky, MD.

Calhoun County — Norman H. Amos, MD; Richard J. Campbell, MD; Stephen Fairbanks, MD.

Cass County — Rudolph I. Clary, MD.

Delta-Schoolcraft County — A. B. Bernier, MD.

Gratiot-Isabella-Clare County — William L. Harrigan, MD.

Ingham County — Roger Hanna, MD; Paul J. Ochsner, MD; Ralph H. Ruhnkorff, MD; Ralph Wadley, MD.

Kalamazoo County — Frederick M. Doyle, MD; Paul M. Fuller, MD; Robert C. Murdy, MD.

Kent County — Leon DeVel, MD.

Midland County — Harold H. Gay, MD.

Oakland County — Henry O. Coucke, MD; James T. Cheng, MD; Aben Hoekman, MD; Oliver Marcotte, MD; Theodore H. Pauli, MD.

Oceana County — Merle G. Wood, MD.

Saginaw County — Gerald L. Ackerman, MD; Harry M. Bishop, MD; Francis V. Kowals, MD; Harry G. Richter, MD.

Tuscola County — Willard W. Dickerson, MD.

Washtenaw County — Philip N. Brown, MD.

Wayne County — Leslie T. Colvin, MD; Charles C. Eades, MD; Harold H. Harris, MD; Paul V. O'Rourke, MD; Meshel Rice, MD.

Associate Memberships

The list of candidates for Associate Membership from Washtenaw County was reviewed. Since all candidates are eligible, no action is required by the House of Delegates inasmuch as they may become Associate Members of this Society upon application and certification by the secretary of their component medical society.

THE HOUSE adopted the report of the Reference Committee.

PRESENTATIONS AND AWARDS

CERTIFICATES OF COMMENDATION

Speaker James B. Blodgett, MD, presented the following Certificates of Commendation as authorized by the House of Delegates:

A. Fleming Barbour, MD, Genesee County —

"In recognition of his inspiring civic service in Flint for more than 25 years, especially with community programs for children, churches, the needy; and also for his excellent leadership in medical and specialty organizations."

Harry A. Clark, MD, Mason County —

"In recognition of many years of inspirational teaching as a professor at the Wayne State University Medical School; and in appreciation for continuing medical contributions to the people of Muskegon, and now Mason counties."

John M. Dorsey, MD, Wayne County —

"In recognition of his distinguished career as a psychiatrist, teacher and chairman of the Wayne State University Medical School Department of Psychiatry; and his many continuing contributions now to medicine, literature and education as the 'WSU University Professor,' "

Fred C. Sabin, MD, Marquette-Alger County —

"In recognition of his dedicated service as a member of the Northern Michigan University Board of Control and as a member of the Michigan State Board of Registration in Medicine; and as a prominent citizen of Marquette in professional, political and business circles."

Wilbur D. Towsley, MD, Midland County —

"In recognition of 45 years of distinguished service in Midland as a beloved family doctor; and for his unselfish assistance to many medical students, and also to many children and families in need."

MICHIGAN'S OUTSTANDING PHYSICIAN

James B. Blodgett, MD, Speaker, presented to Marjorie Peebles Meyers, MD, of Detroit, the following award as Michigan's Outstanding Physician of 1968:

"In recognition of a distinguished career as a Detroit internist, as an excellent clinical instructor for the Wayne State University Medical School, as a medical statesman for the Wayne County Medical Society and Michigan State Medical Society, and as a member of the Michigan delegation to the AMA House of Delegates; and also in recognition of inspiring service and leadership with many Michigan and Detroit health, welfare, cultural and educational organizations."

FIFTY YEAR AWARDS

President Bradley M. Harris, MD, presented the Fifty Year Award to the following:

Elden C. Baumgarten, MD, Wayne County
A. M. Giddings, MD, Calhoun County
Lloyd C. Harvie, MD, Saginaw County
Clyde K. Hasley, MD, Wayne County
M. S. Hurth, MD, Ingham County
Karm C. Kerwell, MD, Menominee County
Fred O. Lepley, MD, Wayne County
Milton D. Vokes, MD, Wayne County
Alfred H. Whittaker, MD, Wayne County

Fifty Year Awards subsequently were presented to the following persons who were not able to be present:

Wyman C. C. Cole, Sr., MD, Wayne County
Ray S. Dixon, MD, Wayne County
William E. Hilton, MD, Wayne County
Joseph A. Kasper, MD, Wayne County
Sol M. Lewis, MD, Oakland County
Welcome B. Lewis, MD, Calhoun County
Alton R. Marsh, MD, Wayne County
Arthur B. Norton, MD, Wayne County
Robert L. Novy, MD, Wayne County
Harold F. Raynor, MD, Wayne County
John B. Rieger, MD, Wayne County
Isaac S. Schembeck, MD, Wayne County
Edward F. Sladek, MD, Grand Traverse, Leelanau-Benzie County
James M. Stanton, MD, Wayne County
Garnet G. Stonehouse, MD, Kent County
William V. VanderVoort, MD, Calhoun County
T. P. Wickliffe, MD, now in Escondido, California

PRESIDENT'S AWARDS

President Bradley M. Harris, MD, presented awards "in recognition of and grateful appreciation for distinguished service to medicine" to:

Edwin DeYoung, MD, Birmingham — President, American Academy of Occupational Medicine

Francis P. Rhoades, MD, Detroit — President, Academy of Psychosomatic Medicine

John Hanlon, MD, Detroit — President, American Public Health Officers Association

SPECIAL AWARDS

The following AMA Certificates of Humanitarian Service were presented by AMA President-Elect Gerald D. Dorman, MD, to:

Daniel D. Chapman, MD, Owosso
J. Colin Elliott, MD, Buchanan
Joseph A. Grady, MD, Detroit
Seymour Krevsky, MD, Detroit
Armand M. LaSorsa, MD, Manistique
Donald Lipsey, MD, Durand
Adrian J. Neerken, MD, Kalamazoo
Leonard M. Pickering, MD, Southgate
Henry C. Scharnweber, MD, Midland
Roger A. Scholten, MD, Kalamazoo
Daniel B. White, MD, Rochester

"Presented by the American Medical Association in recognition of the meritorious service performed for the medical profession, the United States Government and the people of South Viet Nam by treating the ill and injured during his medical mission under the AMA's Volunteer Physicians for Viet Nam."

Speaker James B. Blodgett, MD, presented a Past Speaker's Key to former Speaker James J. Lightbody, MD.

EMPLOYEE AWARDS

Council Chairman Robert J. Mason, MD, presented the following employee awards as previously authorized by the House of Delegates:

Helen A. Schulte — 25 years of service
Robert J. Roney — 20 years of service

TRIBUTE TO DECEASED FORMER MEMBERS OF THE HOUSE OF DELEGATES

Secretary Kenneth H. Johnson, MD, read the following names and the members of the House arose and stood in silent tribute to their memory:

Charles L. Hess, MD, Bay County
Donald R. Wright, MD, Genesee County
I. W. Brown, MD, Kalamazoo County
J. R. McBride, MD, Lapeer County
H. D. Dykhuizen, MD, Muskegon County

C. T. Ekelund, MD, Oakland County
Oliver W. Lohr, MD, Saginaw County
Harry F. Dibble, MD, Wayne County
Crosby D. Eaton, MD, Wayne County
Joseph Hickey, MD, Wayne County

ELECTIONS

The following Officers and Councilors were elected:

President-Elect — Robert J. Mason, MD, Birmingham
Speaker — James B. Blodgett, MD, Detroit
Vice-Speaker — Vernon V. Bass, MD, Saginaw

MICHIGAN STATE MEDICAL SOCIETY DIRECTORY

Members of the Michigan State Medical Society will find this 1969 issue of the Directory very useful. In addition to the several listings of the MSMS members, the Directory includes valuable reference information about the Michigan State Medical Society and its committees, the American Medical Association, etc.

The Publication Committee of The Council welcomes your suggestions.

Total	7743

The figures on the map include the total number of members in each component society.

Open-eyed nights

Too tense to sleep...too tired to get up. Early to bed, late to rise, and not much sleep at that, the patient with severe psychic tension is understandably tired. His tensions and overreactions to the day's stresses may interfere with proper sleep, and his inability to face the day's activities can produce an ever-worsening pattern. By relieving psychic tension, Valium® (diazepam) facilitates sleep, particularly with an h.s. dose. In many patients, the usefulness of Valium has been demonstrated in relieving psychic tension alone or with secondary depressive symptoms. Valium is generally well tolerated and, with proper maintenance dosage, usually does not unduly impair mental acuity or ability.

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Tension and anxiety states; somatic complaints which are concomitants of emotional factors; psychoneurotic states manifested by tension, anxiety, apprehension, fatigue, depressive symptoms or agitation; acute agitation, tremor, delirium tremens and hallucinosis due to acute alcohol withdrawal; adjunctively in: skeletal muscle spasm due to reflex spasm to local pathology, spasticity caused by upper motor neuron disorders; athetosis, stiff-man syndrome, convulsive disorders (not for sole therapy).

Contraindications: Known hypersensitivity to drug; children under 6 months of age; acute narrow angle glaucoma; may be used in patients with open angle glaucoma who are receiving appropriate therapy.

Warnings: Not of value in treatment of psychotic patients, and should not be employed in lieu of appropriate treatment. As with most CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving). When used adjunctively in convulsive disorders, possibility of increase in frequency and/or severity of grand mal seizures may require increase in dosage of standard anticonvulsant medication; abrupt withdrawal in such cases may also be associated with temporary increase in frequency and/or severity of seizures. Advise patients against simultaneous ingestion of alcohol and other CNS depressants. Withdrawal symptoms (similar to those with barbiturates and alcohol) have occurred following abrupt discontinuance. Keep addiction-prone individuals (such as drug addicts or alcoholics) under careful surveillance because of their predisposition to habituation and dependence. Use of any drug in pregnancy, lactation or in women of childbearing age requires that potential benefit be weighed against possible hazard.

Precautions: If combined with other psychotropics or anticonvulsants, carefully consider individual pharmacologic effects —particularly with known compounds which may potentiate action of Valium (diazepam), such as phenothiazines, narcotics, barbiturates, MAO inhibitors and other antidepressants. Employ usual precautions in the severely depressed or in those with latent depression; suicidal tendencies may be present and protective measures necessary. Observe usual precautions in impaired renal or hepatic function. Limit dosage to smallest effective amount in elderly and debilitated to preclude ataxia or oversedation (initially 2 to 2½ mg once or twice daily, increasing gradually as needed or tolerated).

Adverse Reactions: Side effects most commonly reported: drowsiness, fatigue and ataxia. Infrequently encountered: confusion, constipation, depression, diplopia, dysarthria, headache, hypotension, incontinence, jaundice, changes in libido, nausea, changes in salivation, skin rash, slurred speech, tremor, urinary retention, vertigo and blurred vision. Paradoxical reactions such as acute hyperexcited states, anxiety, hallucinations, increased muscle spasticity, insomnia, rage, sleep disturbances and stimulation have been reported; should these occur, use of the drug should be discontinued. Because of isolated reports of neutropenia and jaundice, periodic blood counts and liver function tests are advisable during long-term therapy. Minor changes in EEG patterns (low-voltage fast activity) observed during and after therapy and are of no known significance.

Dosage: Individualize for maximum beneficial effect. *Adults:* Tension, anxiety and psychoneurotic states, 2 to 10 mg b.i.d. to q.i.d.; alcoholism, 10 mg t.i.d. or q.i.d. in first 24 hours, then 5 mg t.i.d. or q.i.d. as needed; adjunctively in skeletal muscle spasm, 2 to 10 mg t.i.d. or q.i.d.; adjunctively in convulsive disorders, 2 to 10 mg b.i.d to q.i.d. *Geriatric or debilitated patients:* 2 to 2½ mg, 1 or 2 times daily initially, increasing as needed and tolerated. (See Precautions.) *Children:* 1 to 2½ mg t.i.d. or q.i.d. initially, increasing as needed and tolerated (not for use under 6 months).

Supplied: Valium® (diazepam) Tablets, 2 mg, 5 mg and 10 mg; bottles of 50, 100 and 500.

ROCHE
Roche®
LABORATORIES
Division of Hoffmann-La Roche Inc.

Valium® (diazepam)

useful for the relief of psychic tension,
alone or with associated depressive symptoms

Whenever anxiety induces or intensifies clinical symptoms

Librium®

(chlordiazepoxide HCl)

Quickly relieves anxiety~Helps improve response in psychophysiologic disorders~Seldom impairs mental acuity or physical coordination, on proper dosage~ Has wide margin of safety

---

Before prescribing, please consult complete product information, a summary of which follows:

Indications: Indicated when anxiety, tension and apprehension are significant components of the clinical profile.

Contraindications: Patients with known hypersensitivity to the drug.

Warnings: Caution patients about possible combined effects with alcohol and other CNS depressants. As with all CNS-acting drugs, caution patients against hazardous occupations requiring complete mental alertness (*e.g.*, operating machinery, driving).Though physical and psychological dependence have rarely been reported on recommended doses, use caution in administering to addiction-prone individuals or those who might increase dosage; withdrawal symptoms (including convulsions), following discontinuation of the drug and similar to those seen with barbiturates, have been reported. Use of any drug in pregnancy, lactation, or in women of childbearing age requires that its potential benefits be weighed against its possible hazards.

Precautions: In the elderly and debilitated, and in children over six, limit to smallest effective dosage (initially 10 mg or less per day) to preclude ataxia or oversedation, increasing gradually as needed and tolerated. Not recommended in children under six. Though generally not recommended, if combination therapy with other psychotropics seems indicated, carefully consider individual pharmacologic effects, particularly in use of potentiating drugs such as MAO inhibitors and phenothiazines. Observe usual precautions in presence of impaired renal or hepatic function. Paradoxical reactions (*e.g.*, excitement, stimulation and acute rage) have been reported in psychiatric patients and hyperactive aggressive children. Employ usual precautions in treatment of anxiety states with evidence of impending depression; suicidal tendencies may be present and protective measures necessary. Variable effects on blood coagulation have been reported very rarely in patients receiving the drug and oral anticoagulants; causal relationship has not been established clinically.

Adverse Reactions: Drowsiness, ataxia and confusion may occur, especially in the elderly and debilitated. These are reversible in most instances by proper dosage adjustment, but are also occasionally observed at the lower dosage ranges. In a few instances syncope has been reported. Also encountered are isolated instances of skin eruptions, edema, minor menstrual irregularities, nausea and constipation, extrapyramidal symptoms, increased and decreased libido—all infrequent and generally controlled with dosage reduction; changes in EEG patterns (low-voltage fast activity) may appear during and after treatment; blood dyscrasias (including agranulocytosis), jaundice and hepatic dysfunction have been reported occasionally, making periodic blood counts and liver function tests advisable during protracted therapy.

Usual Daily Dosage: Individualize for maximum beneficial effects. *Oral*—Adults: Mild and moderate anxiety and tension, 5 or 10 mg t.i.d. or q.i.d.; severe states, 20 or 25 mg t.i.d. or q.i.d. Geriatric patients: 5 mg b.i.d. to q.i.d. (See Precautions.)

Supplied: Librium® (chlordiazepoxide HCl) Capsules, 5 mg, 10 mg and 25 mg—bottles of 50. Libritabs T.M. (chlordiazepoxide) Tablets, 5 mg, 10 mg and 25 mg—bottles of 100. With respect to clinical activity, capsules and tablets are indistinguishable.
